

TEMPLE RAID. SIXTY SECONDS A ROUND.

The first application inside Spartan OS. An on-chain game launched on 6 September 2026 with games partner GoPlay. Every round executes on Anubis Chain; every outcome is drawn from verifiable randomness.

HOW A ROUND WORKS

- 1 Connect a wallet**
Bitget, OKX, TokenPocket, Binance Wallet or MetaMask on the Anubis network.
- 2 Choose an asset**
Several ecosystem assets are accepted, RM and GD among them. No conversion step.
- 3 Enter the round**
Rounds run for sixty seconds. The entry is recorded on-chain the moment you commit.
- 4 The outcome resolves**
Drawn from provable randomness and settled on-chain. Anyone can check the result afterwards.

60 S

Round length

RM · GD

Accepted, alongside other ecosystem assets

ON-CHAIN

Execution, randomness and settlement, all on Anubis

WHO BUILT IT

GoPlay, the games partner named by Anubis Chain, with Spartan OS providing the token layer and Anubis Chain providing settlement.

WHY IT MATTERS FOR THE TOKENS

RM and GD gain a live use. A token that can be spent inside a game is a different thing from a token that can only be held.

THE PHRASE YOU WILL SEE

“Perpetual insurance backing” is TempleRaid’s term for the reserve pool that funds payouts. Details are published by GoPlay.
