Incwadi yesandla ye-Spartan OS

Ungaqala kanjani ngezinyathelo eziyisikhombisa, ibhondi kuqala, imigomo njengoba yayiboniswa ngomhla ka-24 Septhemba 2026, yonke impendulo ngesihloko, imibhalo yezimpikiso, izimpendulo zephrojekthi emibuzweni eyishumi nanye yokuhlolisisa, umlayezo oya kubalingani bamazwe ngamazwe nesiqondiso sebhondi, izimemezelo kusukela ekwethulweni, nemithetho egcina izimali ziphephile. Umtapo, weselula nowokuphrinta.

PHALANX COMMUNITY · I-SPARTAN OS KU-ANUBIS CHAIN · INGUQULO YESIZULU

SONKE ISIBALO NJENGOBA KUSHIWO YI-SPARTAN OS NOMA YI-ANUBIS CHAIN NGOSUKU OLUNIKEZIWE · AMAZINGA AYASHINTSHA; IMIKHAWULO IMISWA LAPHO UNGENA · AKUSONA ISELULEKO SEZEZIMALI

OKTHOBA 2026

OKUQUKETHWE

Okukule ncwadi yesandla

Izinsiza ezifanayo nezasemtapweni, ngokulandelana umuntu omusha ahlangana ngakho nazo: izinyathelo eziyisikhombisa kuqala, ibhondi ngaphambi kwanoma iyiphi i-staking, bese kuba imigomo, bese kuba yonke impendulo, bese kuba lokho abantu abakusho bephikisa, bese kuba izimpendulo zephrojekthi emibuzweni eyishumi nanye yokuhlolisisa, bese kuba umlayezo iphrojekthi ewuthumela kuwo wonke umlingani omusha wamazwe ngamazwe nesiqondiso sayo ngamabhondi, bese kuba lokho okumenyezelwe, bese kuba imithetho.

UNGAKUFUNDA KANJANI LOKHU

Lonke izinga linomkhawulo walo nosuku lwalo. Lapho isibalo sivela ku-dApp kushiwo kanjalo, nosuku esafundwa ngalo; lapho sivela emhlanganweni noma kudokhumenti, lowo mthombo uyashiwo. Akukho lapha okuyisithembiso senzuzo. Umtapo osesixhumanisini esisekhasini lokugcina ubuyekezwa kuqala; le ncwadi yesandla iyalandela ngenguqulo ngayinye.

I-Phalanx

Abangamakhulu amathathu bavikela umhubhe wezintaba ngoba ngamunye wayevikela olandelayo. Umphakathi usebenza ngendlela efanayo: sonke isibalo nomkhawulo waso nosuku lwaso, azikho izithembiso zenzuzo, izixhumanisi ezivela emakhasini asemthethweni kuphela, futhi umbuzo ongaphendulwanga uyiswa kumholi kunokuba kuqagelwe. Umgqugquzeli ogcina leyo mithetho emine angathenjwa ngeqembu, futhi umuntu omusha oyizwa ngosuku lokuqala uyazi ukuthi ujoyine iqembu elinjani.

01

INGXENYE I

Ungaqala kanjani: izinyathelo eziyisikhombisa

Okomuntu ongakaze abe nesikhwama. Okufanele ukwenze, okudingayo, nokuthi wazi kanjani ukuthi kusebenzile. Ubusuku obubodwa, imali encane kuqala. Ibhondi liza kuqala; i-staking iza ngemva kokuba usungene ohlelweni futhi unayo i-RM oyithenge kumholi wakho.

Zonke izibalo njengoba kushiwo yi-Spartan OS noma i-Anubis Chain ngosuku olushiwo. Amazinga ayashintsha; imikhawulo imiswa lapho ungena. Akusona iseluleko sezezimali.

ISINYATHELO 1

Faka isikhwama, wenze ikhophi yesipele

Faka i-Bitget Wallet usebenzisa uhlu olusemthethweni esitolo sezinhlelo zokusebenza (i-Anubis Chain iyayincoma; iketango lifakwe ngaphakathi, futhi i-swap nokudlulisa phakathi kwamaketango kusebenza ngaphakathi kuyo). I-OKX Wallet, i-TokenPocket, i-Binance Wallet noma i-MetaMask nazo ziyasebenza, uma inethiwekhi yengezwe ngesandla esinyathelweni 2. Dala isikhwama esisha, bhala amagama okuvuselela (seed phrase) ephepheni, bese ugcina iphepha kude ne-inthanethi. Ayikho i-akhawunti esemthethweni ezoke iwacele.

UDINGA

Ucingo noma ikhompyutha, imizuzu eyishumi, ipeni.

UZOKWAZI KANJANI UKUTHI KUPHUMELELE

Isikhwama sikhombisa ikheli eliqala ngo-0x. Lelo kheli liyafana kulo lonke iketango le-EVM, kuhlanganise ne-Anubis.

ISINYATHELO 2

Engeza i-Anubis Chain esikhwameni

Ku-Bitget Wallet, i-Anubis isivele isohlwini lwamanethiwekhi: shintshela kuyo. Kunoma yisiphi esinye isikhwama, engeza inethiwekhi ngesandla ngala manani ncamashi: igama Anubis, RPC https://rpc.anubispace.org, i-chain ID 6714, uphawu DAI, i-explorer https://browser.anubispace.org. Uma ukusesha kwesikhwama kukhombisa amanethiwekhi amaningi abizwa ngokuthi Anubis, ungakhethi nje eyodwa; i-chain ID 6714 yiyona kuphela inkomba ebalulekile.

UDINGA

Amanani amahlanu angenhla. Akukho okunye.

UZOKWAZI KANJANI UKUTHI KUPHUMELELE

Isikhwama sikhombisa i-chain ID 6714 nebhalansi ye-gasDAI (0 okwamanje). Amanani afanayo aboniswa ku-chainlist.org/chain/6714.

ISINYATHELO 3

Thola i-gasDAI: uphethiloli wakho konke okwenzayo

Konke ukuthengiselana ku-Anubis kubiza ingxenyana yesenti, ekhokhwa nge-gasDAI. Isikhwama esingenayo i-gasDAI asikwazi ukwenza lutho, ngakho lokhu kuza ngaphambi kokudlulisa kokuqala. Ku-BNB Chain, thenga noma ushintshe amadola amahlanu kuya kwayishumi abe yi-DAI, bese uyidlulisela ku-Anubis nge-bridge: ku-app.anubisbridge.com, ku-galebridge.net, noma esikrinini sokudlulisa phakathi kwamaketango ngaphakathi kwe-Bitget Wallet, kuthayiphwe ngesandla, hhayi neze ngesixhumanisi esisengxoxweni. Isuka ku-BNB Chain, iya ku-Anubis (6714). I-DAI ifika njenge-gasDAI.

UDINGA

I-DAI yamadola amahlanu kuya kwayishumi ku-BNB Chain, kanye ne-BNB encane ye-gas yokukhipha lapho.

UZOKWAZI KANJANI UKUTHI KUPHUMELELE

Isikhwama, ku-Anubis, sikhombisa ibhalansi ye-gasDAI. Namathisela ikheli lakho ku-browser.anubispace.org bese kuvela ibhalansi efanayo.

ISINYATHELO 4

Letha i-USDT ku-Anubis, uqale ngemali encane

Thenga i-USDT kunoma iyiphi inkundla yokuhweba bese uyikhiphela ekhelini lesikhwama sakho ku-BNB Chain (BEP-20); yilo iketango elishibhile kakhulu lokusuka nge-bridge. Bese uyidlulisela ku-Anubis nge-bridge ngendlela efanayo ne-DAI: u-10 kuya ku-50 USDT kuqala, okusele uma lokho sekufikile. I-Anubis Bridge iyamahhala futhi ihamba kancane (abaholi basho amahora amabili kuya kwamathathu); i-GaleBridge ithatha imizuzwana futhi ikhokhisa u-0.5% kuya ku-1.5%, njengoba kushiwo ngomhla ka-7 Septhemba. Ungalokothi kamuva uthumele izimpahla ze-Anubis ngqo enkundleni yokuhweba; qala ngokubuyisela nge-bridge.

UDINGA

I-USDT ku-BNB Chain, i-gasDAI evela esinyathelweni 3. I-bridge ikhombisa inkokhelo ngaphambi kokuba uvume.

UZOKWAZI KANJANI UKUTHI KUPHUMELELE

Ibhalansi ye-USDT ekhelini lakho le-Anubis iboniswa ku-browser.anubispace.org.

ISINYATHELO 5

Joyina ngesixhumanisi sokumema noma ngekhodi yomholi wakho

Qala ngokujoyina isiteshi se-Phalanx, bese uvula i-dApp ye-Spartan OS ku-spartanar.org ngesixhumanisi sokumema umholi wakho akunika sona ubuso nobuso, noma ufake ikhodi yesimemo lapho i-dApp iyicela khona. Xhuma isikhwama ku-Anubis bese usiyeka sivumelanise. I-dApp ibophela ommemile okokuqala lapho isikhwama sixhuma, futhi lokho akunakushintshwa kamuva, ngakho ungalokothi usebenzise isixhumanisi esivela engxoxweni evulekile. Bese ideshibhodi ikhombisa amazinga abukhoma nemikhawulo yomkhiqizo ngamunye: yizo izibalo okufanele uzisho, hhayi neze lezo ezisengxoxweni.

UDINGA

Isixhumanisi noma ikhodi evela kumuntu okwethulile, nesikhwama esine-USDT ne-gasDAI.

UZOKWAZI KANJANI UKUTHI KUPHUMELELE

Ideshibhodi ikhombisa ikheli lakho, ibhalansi yakho ye-USDT negama lommemile wakho.

ISINYATHELO 6

Thenga ibhondi lezinsuku ezingu-540

Kudeshibhodi khetha ibhondi le-liquidity, izinsuku ezingu-540. Ukhokha nge-USDT bese uthola i-RM ngentengo yebhondi, engaphansi kwentengo yemakethe: ngomhla ka-25 Septhemba 2026 ibhondi lezinsuku ezingu-540 lalingaphansi kwemakethe ngo-14.79% (u-1,000 USDT wathenga u-38.09 RM, uma kuqhathaniswa no-32.46 emakethe), futhi iphrojekthi ithi isaphulelo asimisiwe. Imali eyinhloko nemiklomelo kukhululwa nsuku zonke phakathi nezinsuku ezingu-540, ngomkhawulo ongu-5× wemali yokungena ku-USDT, omiswa lapho ungena, futhi imiklomelo yansuku zonke ingenziwa inqwabelane. Lena yindlela yokungena encomwa yiqembu lamazwe ngamazwe kulesi sikhathi, futhi iza ngaphambi kwanoma iyiphi i-staking: i-staking ilandela uma usungene ohlelweni futhi unayo i-RM oyithenge kumholi wakho. Funda intengo yebhondi, isaphulelo nomkhawulo esikrinini ngaphambi kokuba uvume, futhi uqale ufake inani esibalini.

UDINGA

I-USDT ku-Anubis, i-gasDAI yenkokhelo. Kusukela kudola elilodwa; qala uhlole ngebhondi elincane.

UZOKWAZI KANJANI UKUTHI KUPHUMELELE

Ibhondi livela kudeshibhodi nesikhathi salo, intengo nomkhawulo. Amazinga nezaphulelo kuyashintsha; imikhawulo imiswa lapho ungena. Akukho lapha okuyisithembiso senzuzo.

ISINYATHELO 7

Uku-claim njalo emahoreni angu-12, nge-turbine

Konke okukhululwayo, okwebhondi, okwe-staking, okwemiklomelo yezikhundla nokwemali engenayo yamazinga ngokufanayo, kwenziwa i-claim nge-turbine (i-pool ye-turbo): uthenga inani elifanayo le-RM ku-RocketSwap, ngesilinganiso sika-1:1, ulinde amahora angu-24, bese womabili amanani aba ngawakho. Ukuze ubone i-RM ne-GD esikhwameni, ngenisa amakheli ezinkontileka zazo kanye usuka esigabeni esithi Imigomo yanamuhla (qhathanisa izinhlamvu ezine zokuqala nezine zokugcina). Inzalo iyanqwabelana uma uyishiya ngaphakathi; imiklomelo eyengeziwe ayinqwabelani, ngakho yenza i-claim yayo nsuku zonke.

UDINGA

I-gasDAI ye-claim ne-USDT yokuthenga okulinganayo ku-RocketSwap.

UZOKWAZI KANJANI UKUTHI KUPHUMELELE

I-claim nokuthenga okulinganayo kokubili kuyabonakala ku-browser.anubispace.org ngaphansi kwekheli lakho; isikhwama sikhombisa i-RM ne-GD.

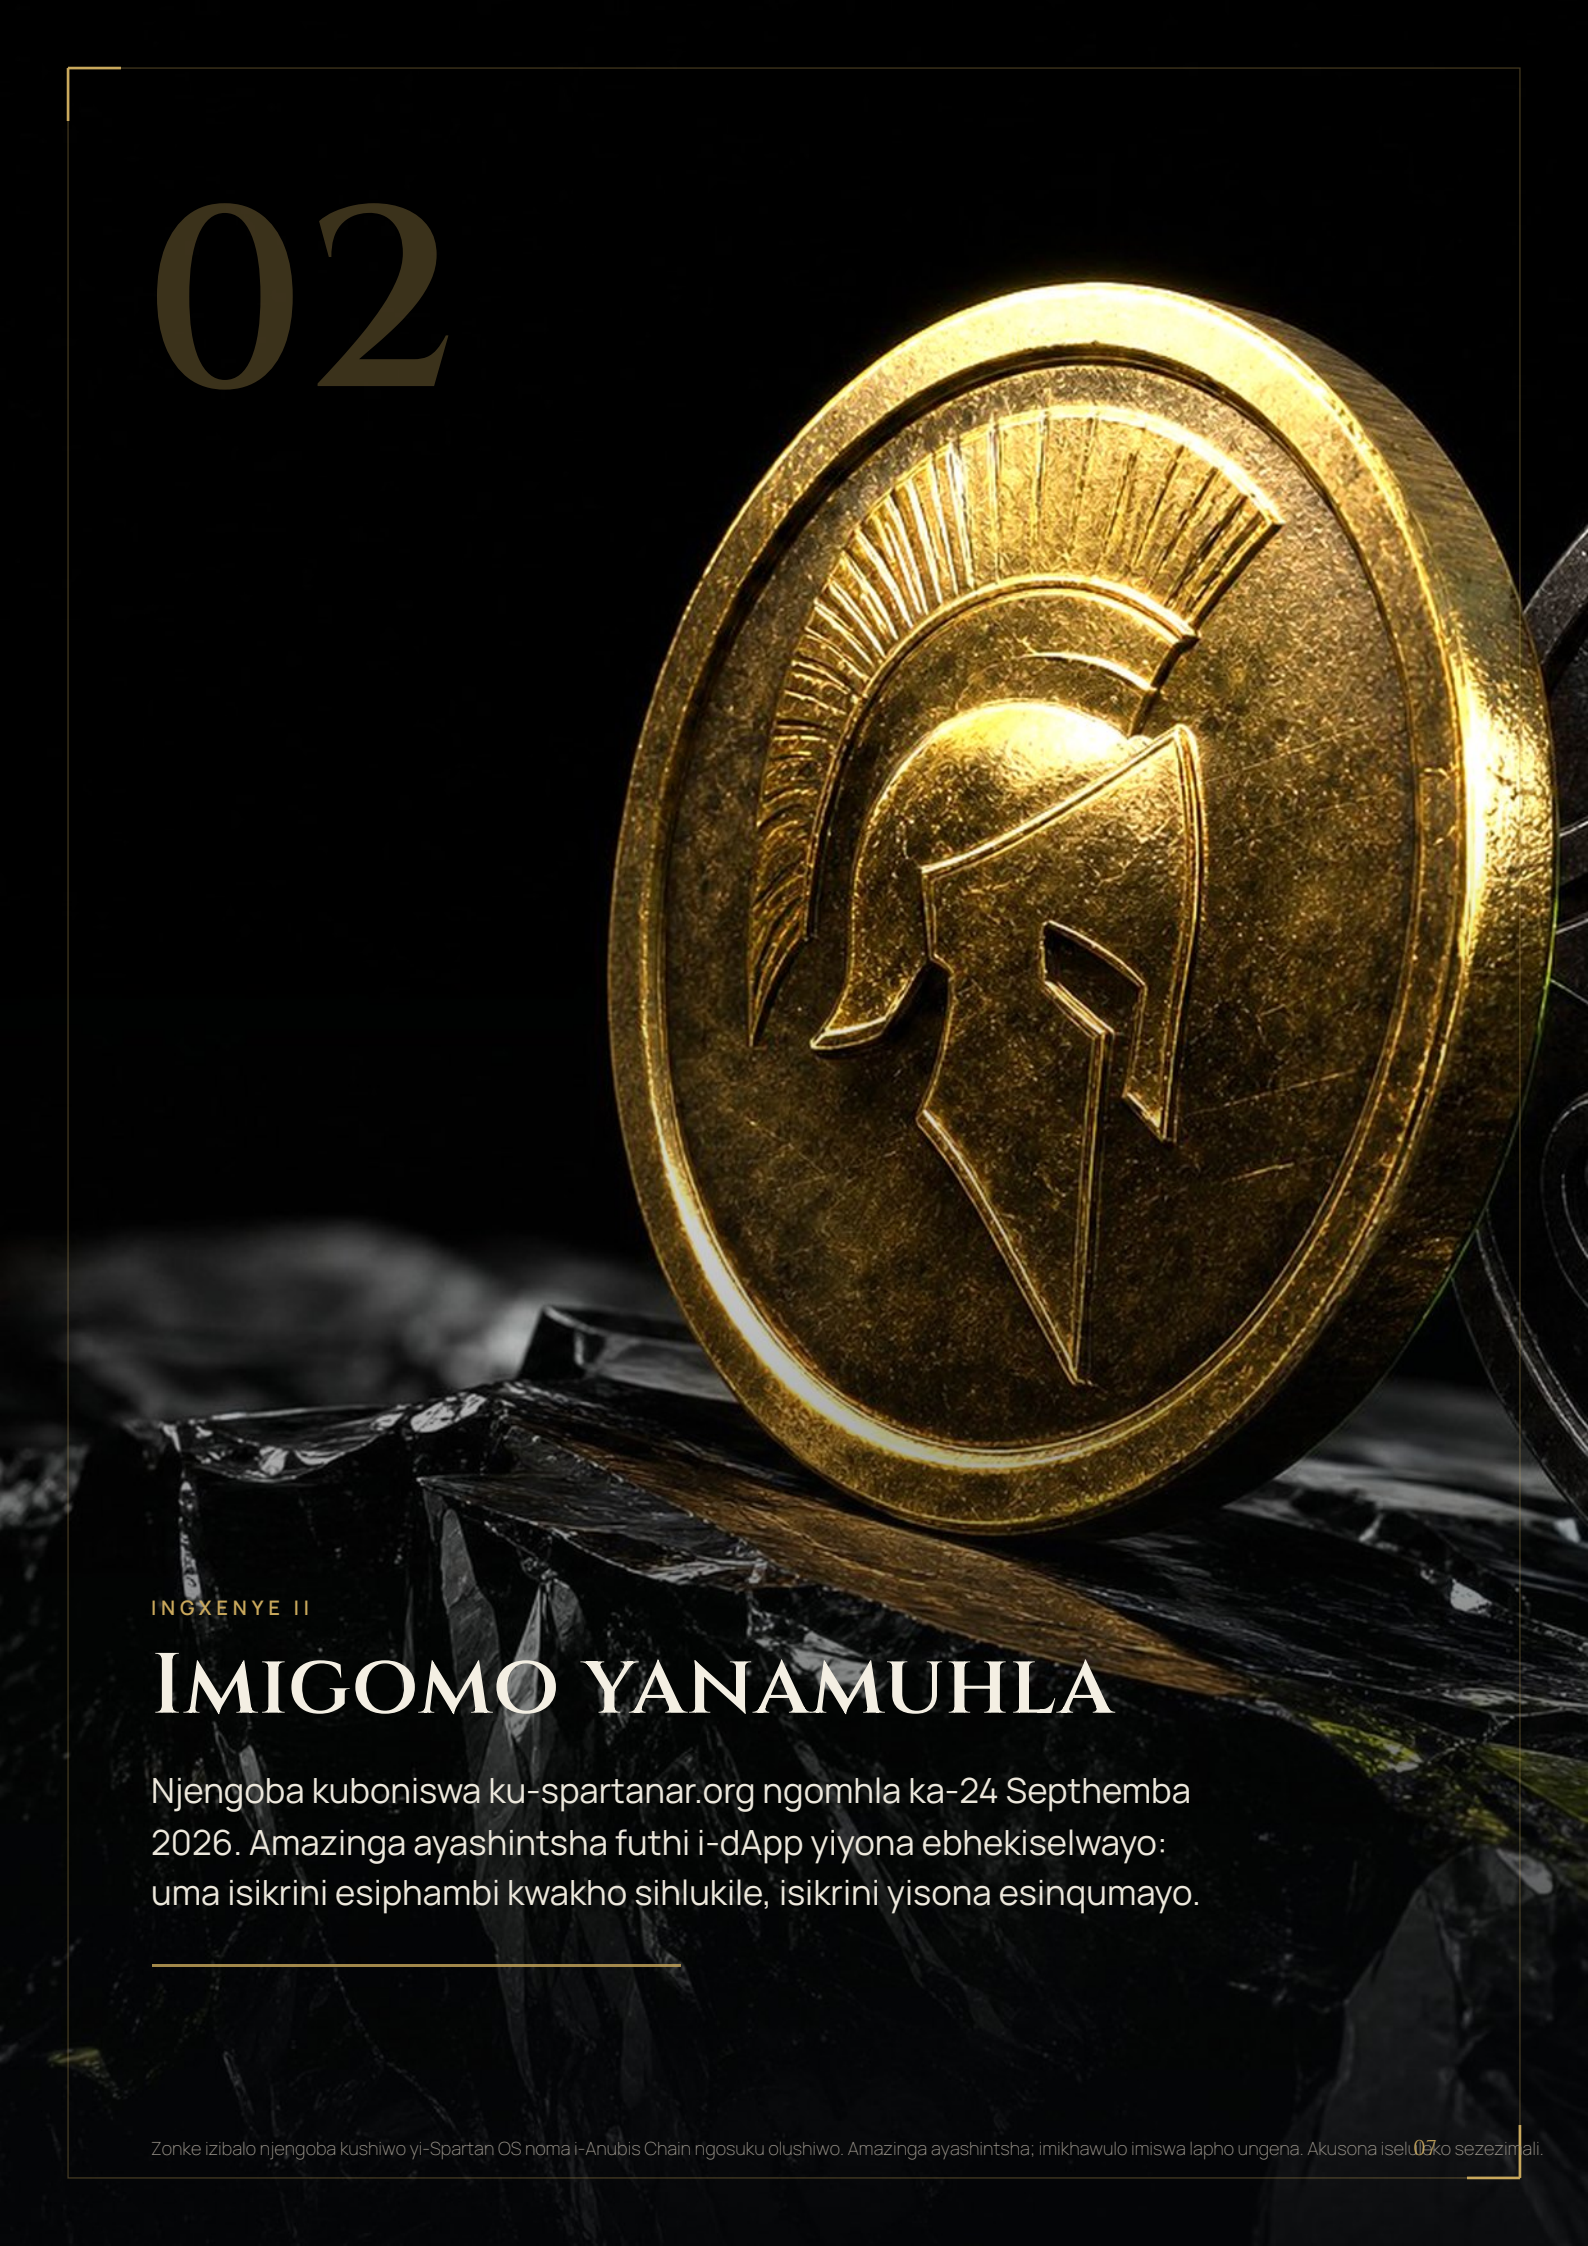

NGEMUVA KWEZINYATHELO EZIYISIKHOMBISA: I-STAKING

I-staking akuyona enye yezinyathelo eziyisikhombisa. Iza ngemva kokuba usungene ohlelweni futhi unayo i-RM oyithenge kumholi wakho: kusukela lapho imikhiqizo ye-staking kudeshibhodi (eguquguqukayo, yezinsuku ezingu-180, 360 no-540) ivulekile kuwe, izinga nomkhawulo kufundwa esikrinini ngalolo suku. Ibhondi liwukungena; i-staking yilokho okulilandelayo, ngamathokheni avela kumholi wakho.

NGAPHAMBI KWESINYATHELO NGASINYE ESIHAMBISA IMALI

Thayipha amakheli, ungawachofozi. Hlola ukuthi i-chain ID ingu-6714. Hlolisisa izinhlamvu ezine zokuqala nezine zokugcina zalo lonke ikheli. Zama indlela ngayinye entsha ngemali encane. Gcina amagama okuvuselela (seed phrase) ephepheni. Ayikho i-akhawunti esemthethweni ezoke iwacele.

02

INGXENYE II

Imigomo yanamuhla

Njengoba kuboniswa ku-spartanar.org ngomhla ka-24 Septhemba 2026. Amazinga ayashintsha futhi i-dApp yiyona ebhekiselwayo: uma isikrini esiphambi kwakho sihlukile, isikrini yisona esinqumayo.

INGXENYE III

Izimpendulo, ngesihloko

Wonke amakhadi olwazi asemtapweni ngaphandle kwezindaba, ngokulandelana kwezihloko. Impendulo kuqala, imininingwane okwesibili, umthombo ekugcineni.

Anubis Chain

Iketango: ubani olakhile, yini esebenza kulo, yini elenza lihluke.

Ubani ongemuva kwe-Anubis Chain ne-Spartan OS?

I-Anubis Foundation, eshicilela umlando weminyaka emibili, amazwekazi amahlanu, amazwe angamashumi amabili namaphrojekthi angaphezu kwekhulu. Amathathu awo abalulekile lapha: i-Origin (DeFi 3.0 ku-LGNS), i-WebKey ne-Melos (abasebenzisi abangu-16 wezigidi, njengoba kushiwo), ne-Anubis Chain uqobo. I-Anubis Labs yingxenye exhasa amaphrojekthi eketangweni, futhi i-Spartan OS iyiphrojekthi yayo yokuqala.

Amaphrojekthi amaningi aqala ngokungenalutho: abekho abasebenzisi, azikho izimpahla, alukho umlando. Lena iqala nezigidi zabanikazi asebelazi igama lenhlangano, kanye neketango elilawulwa yinhlangano. I-Spartan OS isebenzisa ama-smart contract angu-137 kukhodi eyayisebenzisa i-Origin ne-Awake; ukuhlolwa kwe-CertiK sekuthunyelwe. Umlando wenhlangano njengoba ushicilelwe ku-anubi.pro; ukubambisana ne-Origin kwamenyezelwa yi-Anubis Foundation ngo-8 Julayi 2024.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 2

I-Origin yafakazelani?

Ukuthi le nhlangano ingakha imakethe yezigidi futhi iyigcine iphila. Esithombeni sedatha se-AVE, i-Origin (LGNS) yayinabanikazi abangu-2.5 wezigidi, inani lemakethe elijikelezayo elingu-$1.4 wezigidigidi, i-pool engu-$200 wezigidi nokuthengiselana okungu-91,000 ngosuku olulodwa. Ngemuva kweminyaka emibili, cishe u-$55 wezigidi usekhona ku-pool ye-Origin ku-Polygon.

Lezi yizibalo zomlando, hhayi izintengo zanamuhla. Okubalulekile yisibalo sokugcina: ngemuva kweminyaka emibili i-pool isekhona futhi abantu basengathengisa. Isithombe sedatha njengoba sinikezwe yi-Anubis Foundation, singahlolwa ku-ave.ai; isibalo se-pool sanamuhla njengoba kushiwo embikweni wangomhla ka-14 Septhemba 2026.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 3

Yini i-Anubis Chain esivele iyenza? Izibalo.

I-mainnet kusukela ngo-Ephreli 2026, i-chain ID 6714. Njengoba kushicilelwe yi-Anubis Chain ngoSepthemba 2026: ukuthengiselana okungaphezu kuka-100 wezigidi, amakheli angaphezu kuka-18 wezigidi, ama-smart contract angaphezu kuka-16,000, amathokheni angaphezu kuka-1,900, cishe umzuzwana owodwa ebhulokhini ngalinye. Izinkokhelo zikhokhwa nge-gasDAI, ebophelwe kudola.

Konke kusobala ku-explorer yomphakathi ku-browser.anubispace.org. Iketango lenzelwa inkomba yi-The Graph, Iibukwa nge-Blockscout futhi lixhunywe namanye amaketango nge-LayerZero, Stargate, Anubis Bridge ne-GaleBridge. Izethulo zangaphambili zibuye zisho ukuthengiselana okungu-2,400+ ngomzuzwana, isikhathi sebhulokhi esingu-450 ms nabahloli abasebenzayo abangu-21 kuma-node angu-52; lezo yizibalo zephrojekthi uqobo.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 4; umbiko wedatha wezikhathi ezithile we-Anubis Chain, Septhemba 2026

Kungani kubalulekile ukuthi i-Spartan OS isebenza eketangweni layo?

Uma iphrojekthi isebenza eketangweni lomunye, i-gas, imithetho nekusasa kungokomunye. I-Anubis Foundation yakha iketango, i-Anubis Labs ixhasa okusebenza kulo, futhi i-Spartan OS iwuhlelo lokusebenza lokuqala. Abantu abafanayo, ikhodi efanayo, iketango elisha.

Umgqugquzeli angakusho emugqeni owodwa: amaphrojekthi amaningi aqasha iketango; lena ingumnikazi walo. Kusho futhi ukuthi sonke isibalo esiphathelene neketango nephrojekthi singahlolwa ku-explorer eyodwa, browser.anubispace.org.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, amaslayidi 2 no-4

Yini i-gasDAI?

Iyunithi i-Anubis Chain eyisebenzisela izinkokhelo zokuthengiselana. Ibophelwe ngesilinganiso esingu-1:1 ku-DAI, imali yedijithali ezinzile yedola, ngakho ukuthengiselana kubiza okufanayo ngosuku oluthule nangosuku olumatasa. Isikhwama sikhombisa ibhalansi ye-gasDAI lapho ku-Ethereum besizokhombisa i-ETH. Ukuthengiselana kubiza ingxenyana yesenti.

Kumaketango amaningi umsebenzisi kufanele aqale athenge ithokheni leketango uqobo ukuze akhokhele noma yini, futhi intengo yalelo thokheni iyashintsha. Ku-Anubis inkokhelo umsebenzisi ayibonayo lapho egunyaza ukuthengiselana yiyona inkokhelo ayikhokhayo, ngamadola, nganoma yiluphi usuku. I-gasDAI ifika nge-bridge esemthethweni: dlulisa i-DAI nge-bridge, bese ibhalansi efikayo iba yi-gas yakho. Ungalokothi uthenge i-gasDAI kumuntu.

Umthombo: Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Ingxenye II noMhlahlandlela 09

Ingabe i-Anubis Chain iyimfihlo noma isobala?

Kokubili, ngokuzikhethela. Ukuthengiselana kusobala ngokuzenzakalelayo, njengaku-Ethereum. Umsebenzisi angakuvikela ukuthengiselana: inani nohlobo kuhlala kubonakala, kodwa ukuthi umthumeli nomamukeli bangobani kuvikelwa ngubufakazi be-PLONK obungadaluli lwazi. I-Anubis ikubiza ngokuthi ukudalula okukhethiwe: kuyimfihlo kubantu, kusobala kuphrothokholi, kuyasebenza kubalawuli.

Ubufakazi obungadaluli lwazi buvumela inethiwekhi ihlole ukuthi ukuthengiselana kuvumelekile, ukuthi umthumeli wayenemali nokuthi imithetho yalandelwa, ngaphandle kokushicilela ukuthi ngubani othumele ini kubani. Ukuthengiselana okuvikelwe kuthatha isikhashana eside ngoba ubufakazi bakhiqizwa ohlangothini lomsebenzisi. Konke umgqugquzeli akwenza nsuku zonke kusebenzisa ukuthengiselana okujwayelekile okusobala.

Umthombo: Incazelo ebanzi, Septhemba 2026, Ingxenye II; Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Ingxenye II

Yini evimbela ukungena phambi kwabanye (front-running) ku-Anubis?

Ukuthengiselana okulindile kubethelwa ngaphambi kokuthi abahloli bakubone. Okungenani izingxenye ezimbili kwezintathu zabahloli kufanele zisebenzisane ukuze kuvulwe ukubethela kokukodwa, futhi lokho kwenzeka kuphela ngemuva kokuba indawo yokuthengiselana ebhulokhini isimisiwe. Umkhiqizi webhulokhi akakwazi ukubona i-swap yakho ku-RocketSwap bese ethengisa ngaphambi kwayo. Lo mklamo ukuvimbela ngokuphelele ukuhlasela kwesemishi (sandwich attacks) esikhundleni sokukudikibalisa.

Ukuhlasela kwesemishi kuyindlela evame kakhulu abahwebi abancane abalahlekelwa ngayo imali ezinkundleni zokuhweba ezingenamlawuli oyedwa. Le ndlela isebenzisa ukubethela kwe-BLS12-381 okudinga isilinganiso sabahloli (threshold cryptography), njengoba kuchazwe emibhalweni ye-Anubis Network.

Umthombo: Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Ingxenye II (imibhalo ye-Anubis Network)

Amabhulokhi ahlolwa kanjani? Ingabe ukuthengiselana akusaguquleki?

Iqoqo elimisiwe labahloli lishintshana ngokuphakamisa amabhulokhi, futhi ibhulokhi alisaguquleki uma izingxenye ezimbili kwezintathu noma ngaphezulu sezilisayinile. Akukho ukungaguquleki okusekelwe emathubeni futhi akukho ukuhlelwa kabusha kwamabhulokhi: uma selihloliwe, ibhulokhi aliguquki. Ukuthengiselana okusobala kuhlolwa cishe ngomzuzwana owodwa.

Imibhalo yezobuchwepheshe ichaza uhlobo lwe-IBFT 2.0 olunesethi yabahloli ekhethwa kabusha njalo emabhulokhini angu-100 ngomsebenzi wokungahleleki ongahlolwa. Amakhasi e-docs.anubispace.org nombhalo weketango uqobo othi Imibuzo eyi-100 achaza umklamo we-Proof of Staked Authority one-staking, ukubusa nokunqunywa kwemali ebekiwe njengesijeziso ngokusayina kabili noma ngokungasebenzi, kanye nomthamo wethiyori ocishe ube ukuthengiselana okungu-2,000 ngomzuzwana. Caphuna noma yikuphi ongakukhombisa, futhi usho ukuthi kuvelaphi.

Umthombo: Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Ingxenye II; imibhalo ye-Anubis Chain (docs.anubispace.org)

Ingabe isofthiwe ye-Ethereum iyasebenza ku-Anubis?

Yebo, ngaphandle koshintsho. I-Anubis isebenzisa i-Ethereum Virtual Machine. Izinkontileka ze-Solidity zifakwa njengoba zinjalo, i-MetaMask nesikhwama ngasinye esisekela amanethiwekhi angokwezifiso kuyaxhuma, futhi i-Hardhat, Foundry, Remix ne-ethers.js kusebenza njengaku-Ethereum. Iqembu alibhali kabusha; liphinda lizifake.

Kumsebenzisi onolwazi lwe-Ethereum, izinto ezimbili kuphela ezintsha yi-chain ID, 6714, neyunithi yenkokhelo, i-gasDAI.

Umthombo: Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Ingxenye II

Iyiphi ingqalasizinda esebenzayo eketangweni namuhla?

I-RocketSwap (indawo yokuhweba yeketango, umklamo we-Uniswap V2, efakwe ohlwini lwe-CertiK Skynet), ama-bridge amabili asemthethweni (Anubis Bridge ne-GaleBridge, okwesibili kwahlolwa yi-CertiK ngo-Okthoba 2025), i-explorer ye-Blockscout, inkomba ye-The Graph, imizila ye-LayerZero ne-Stargate, i-Capybara Launch, nokusekelwa kwezikhwama ku-Bitget, OKX, TokenPocket, Binance Wallet ne-MetaMask.

Lona ngumehluko phakathi kweketango elinohlelo lwendlela neketango elinomnotho osebenzayo. I-Bridgers ngumzila womuntu wesithathu i-Anubis engawuphathi. Ozakwethu abaqanjwe ngamagama njengoba kushicilelwe yi-Anubis Chain: DeBox, DappOS, xBubble, Ads3, Golden Pact, REI Network, Bitget Wallet, GoPlay.

Umthombo: Incazelo ebanzi, Septhemba 2026, Ingxenye II

Ingabe i-USDT, i-USDC ne-DAI ezidluliswe nge-bridge ku-Anubis zinesisekelo?

I-Anubis Chain ithi yonke impahla edluliswe nge-bridge ngokusemthethweni yenziwa ngesilinganiso esingu-1:1 lapho impahla yokuqala ikhiywe ku-bridge esemthethweni yokubophela impahla eketangweni lomthombo, futhi ishiswa lapho ibuyiselwa, ukuze izinqolobane ezikhiyiwe zilingane nesamba esikhona ku-Anubis. Izinkontileka ze-bridge zisobala ku-Etherscan.

I-bridge enkulu esemthethweni yokubophela impahla: 0x250ba4e73a365cefdd170a2b1ff9fc03097d64f3. I-bridge enkulu esemthethweni yokuthengiselana: 0x8932fe7726C1EE743F662f485C3e5a5D1D595F71. Umfundi ukuhlola ngokuvula ikhasi le-Etherscan, afunde amabhalansi aphethwe yinkontileka, bese ewaqhathanisa nesamba esikhona sempahla efanayo ku-browser.anubispace.org. Isitatimende sikhishwe sonke esigabeni esithi Izitatimende ezisemthethweni kuleli khasi.

Umthombo: Isitatimende se-Anubis Chain, 20 Septhemba 2026

Iyini i-Anubis Labs?

Ingxenye ye-Anubis Chain ekhulisa amaphrojekthi. Ikhetha amaphrojekthi azokwakha eketangweni, iwaxhase futhi iwasekele kuze kube sekwethulweni. I-Spartan OS iyiphrojekthi yayo yokuqala yabasebenzisi, yingakho la magama womabili evela ndawonye yonke indawo.

I-Anubis Foundation imemezele ukuzibophezela okungu-$300 wezigidi ohlelweni lonke lwe-Anubis Chain; i-FAQ ye-Labs uqobo ichaza isikhwama sokukhulisa esingu-$100 wezigidi esinezimpahla zokukhuthaza eziyi-NFT ezingu-10,000. Zombili izibalo zingezephrojekthi uqobo. Amaphrojekthi i-Labs ewaqamba ngamagama: Capybara Launch, RocketSwap, GaleBridge, AstraCore, AWAKE, Spartan OS, VEST, Golden Pact.

Umthombo: Incazelo ebanzi, Septhemba 2026, Ingxenye II

Yiziphi izici ezingcono eziyisithupha i-Anubis Chain ezishoyo ngayo uqobo?

Ubumfihlo obakhelwe phezu kobufakazi obungadaluli lwazi, kanti iketango lihlala lihloleka. Ukuhlanganiswa kwe-AGI nama-ejenti e-AI. I-Layer 1 eyakhelwe ukuthwala izinhlelo zokusebenza ngobuningi. Ukuhambisana ne-EVM, ukuze amathuluzi nezinkontileka ezikhona kudluliselwe kuyo. Ukusobala kwempahla nge-bridge esemthethweni, izinkontileka zempahla ne-explorer. Uhlelo lomhlaba wonke lwezikhwama, ama-DEX, izinkundla zedatha nabathuthukisi.

Ezimbili kweziyisithupha zingahlolwa yinoma ubani namuhla: ukuhambisana ne-EVM (i-chain ID 6714 ku-chainlist.org) nokusobala kwempahla (izinkontileka ze-bridge ku-Etherscan). Ukuhlanganiswa kwe-AGI kuyinhloso, hhayi isici esesikhishiwe; sho lokho. Umdwebo wolwazi ukhishwe ngo-1 Julayi 2026.

Umthombo: SpartanOS Resource Library (t.me/SpartanOSLibrary), 1 Julayi 2026

I-Anubis Chain iziqhathanisa kanjani namaketango omphakathi endabuko?

Ngamaphuzu ayisishiyagalombili, emdwebeni wayo wolwazi: ukuzibeka (iketango lobumfihlo le-AGI uma liqhathaniswa nenethiwekhi yokuthengiselana evamile), ubumfihlo (ubufakazi obungadaluli lwazi nokudalula okukhethiwe uma kuqhathaniswa nokusobala okuyisisekelo), ubuhlakani, ububanzi bempahla (i-RWA ne-DeFi ndawonye), ukwethembeka kwedatha (izinqolobane namarekhodi aphakathi kwamaketango angahlolwa), ukuxhumanisa uhlelo lonke, ukusekelwa kwabathuthukisi nekhono lokukhula lesikhathi eside.

Ithebula likhishwe lonke esigabeni esithi Ukuqhathanisa. Yi-Anubis Chain ezichaza yona kanye nembangi evamile; licaphune njengendlela iphrojekthi ezibeka ngayo. Umehluko weketango ongahlolwa kulula ukuwuvikela: i-gas ebophelwe kudola, uhlu lokuthengiselana okulindile olubethelwe, ubumfihlo obukhethiwe nezinqolobane ze-bridge ezingu-1:1 ezinkontilekeni ezisobala.

Umthombo: SpartanOS Resource Library (t.me/SpartanOSLibrary), Julayi 2026

Ubani othuthukisa iketango, futhi kungani bengaziwa?

Umbhalo othi Imibuzo eyi-100 uthi iqembu lasungulwa ngo-2024 futhi liqukethe abathuthukisi bomphakathi abangaziwa emhlabeni wonke, abanakekela inethiwekhi ngaphansi kokubusa okwabelwe abaningi, nokuthi ukungaziwa kuvikela ukungathathi hlangothi kwephrojekthi nokuphepha kwabathuthukisi. I-Anubis Foundation ne-Anubis Labs yibo ubuso obubonakalayo: inhlangano ngeketango, i-Labs ngamaphrojekthi akulo.

Kunezincazelo ezimbili futhi zombili ngezephrojekthi uqobo: izinsiza zabagqugquzeli ziqamba i-Anubis Foundation namaphrojekthi ayo angaphambili; i-FAQ ichaza iqoqo labathuthukisi abangaziwa. Umgqugquzeli kufanele anikeze zombili futhi angazenzi ngathi wazi okwengeziwe. Abantu abaqanjwe ngamagama: abekho abashicilelwe.

Umthombo: Imibuzo Nezimpendulo eziyi-100 ze-Anubis Chain, okusemthethweni, Julayi 2026, Q2 no-Q3

Iketango lifinyelela kanjani esivumelwaneni? I-PoSA ngamagama alula.

I-Proof of Staked Authority: ingxube yobufakazi be-staking obunikezelwayo nobufakazi begunya. Abahloli babeka imali ku-staking; labo abanemali eningi ebekiwe bakha iqoqo elisebenzayo, futhi bashintshana ngokukhiqiza amabhulokhi nokuvota. Ukuziphatha kabi njengokusayina amabhulokhi amabili kujeziswa ngokunqunywa kwemali ebekiwe, kunesikhathi sokulinda ngaphambi kokukhipha ukuze umhloli angahambi ngaphambi kokuba isijeziso sifike. Amabhulokhi ahlolwa cishe ngomzuzwana owodwa.

Umthamo wethiyori ushiwo njengokuthengiselana okucishe kube ngu-2,000 ngomzuzwana; umthamo wangempela uncike emthwalweni. Kunezinhlobo ezintathu ze-node: esheshayo, ephelele neyengobo yomlando. Ukuqashwa kwabahloli bekungakavulwa ngoJulayi 2026; inani elincane elibhaliwe umhloli okufanele alibeke ngokwakhe ngu-2,000 DAI. Isofthiwe yeklayenti ihambisana ne-Geth, yingakho amathuluzi e-Ethereum esebenza ngaphandle koshintsho.

Umthombo: Imibuzo Nezimpendulo eziyi-100 ze-Anubis Chain, okusemthethweni, Julayi 2026, Q11 kuya ku-Q21

Ingabe i-Anubis Chain inohlamvu lwemali lwayo?

Akukabi njalo. Kuze kube nguJulayi 2026 alikho ithokheni leketango elikhishiwe; izinkokhelo zikhokhwa nge-gasDAI, evela ku-DAI edluliswe nge-bridge. Impendulo ye-FAQ mayelana nokubusa ichaza ithokheni le-ANB elizayo elinesamba sonke esingu-21 wezigidi njengethokheni le-gas leketango, futhi ibiza i-LGNS ngokuthi isisekelo senani sohlelo lonke, enezinga le-staking elithi lingaphezu kuka-87%. Thatha i-ANB njengento ehleliwe, futhi ungacaphuni lutho ngayo njengokusebenzayo.

Noma ubani othengisa 'Anubis coin' namuhla uthengisa into iketango elithi ayikho. Amathokheni akhona eketangweni yizimpahla ezibophelwe entengweni (USDT, USDC, DAI, ETH, BNB, POL, LGNS) namathokheni amaphrojekthi afana ne-RM ne-GD.

Umthombo: Imibuzo Nezimpendulo eziyi-100 ze-Anubis Chain, okusemthethweni, Julayi 2026, Q22, Q28 no-Q75

Iketango likhula ngokushesha okungakanani? Amaqophelo asemthethweni.

Usuku 103 (20 Julayi): amakheli angu-12.13 wezigidi, ukuthengiselana okungu-38.49 wezigidi, inani eliphelele elikhiyiwe elingu-$189.91 wezigidi. 8 Agasti: amakheli angu-14.10 wezigidi, ukuthengiselana okungu-57.78 wezigidi. Usuku 137 (22 Agasti): amakheli angu-15.61 wezigidi, ukuthengiselana okungu-74.73 wezigidi, okungu-1.079 wezigidi emahoreni angu-24. Usuku 155 (10 Septhemba): amakheli angu-18.19 wezigidi, ukuthengiselana okungu-102.93 wezigidi, izinkontileka ezingu-16,533, amabhulokhi omzuzwana owodwa, i-gas engaphansi kuka-$0.01.

Zonke izibalo njengoba zishicilelwe yi-Anubis Chain ngalezo zinsuku; izinombolo ezibukhoma zitholakala ku-browser.anubispace.org. Amakheli akubona abantu: umuntu oyedwa angaba namaningi. Caphuna inani lokuthengiselana nosuku, bese uyekela i-explorer yenze okunye.

Umthombo: Isimemezelo esikhishwe kabusha ku-SpartanOS Resource Library, 22 Julayi, 8 Agasti, 22 Agasti no-10 Septhemba 2026

I-Anubis ikleliswa kuphi phakathi kwamaketango ku-DEXTools?

Ngo-26 Julayi 2026 i-Anubis Chain icaphune idatha ye-DEXTools yamapheya ashisayo ekleliswa i-AnubisChain endaweni ye-12 phakathi kwamaketango omphakathi ngomthamo wonke wokuhweba, nendaweni ye-10 nge-liquidity. Ukukleliswa kuyashintsha nsuku zonke; vula i-dextools.io/app/hot-pairs ngaphambi kokukucaphuna.

Ukukleliswa kuyisithombe esithathwe ngumuntu wesithathu ngosuku olulodwa. Sho usuku. Ukuxhunywa ne-DEXTools uqobo kwenziwa ngo-19 Ephreli 2026, ngokusho kwe-FAQ.

Umthombo: Isimemezelo esikhishwe kabusha ku-SpartanOS Resource Library, 26 Julayi 2026; Imibuzo Nezimpendulo eziyi-100 ze-Anubis Chain, okusemthethweni, Julayi 2026, Q76

Yibaphi ozakwethu nezinhlelo ezixhunyiwe i-Anubis Chain ezimemezele?

I-AVE.ai: ukuxhumana kwamaketango ne-swap (15 Juni). Ukufakwa ohlwini lwe-CoinGecko njengeketango lomphakathi (23 Juni). Uhlu lozakwethu lwangomhla ka-26 Juni: CoinMarketCap, CoinGecko, DEXTools, Bitget Wallet, MyToken, Ave.ai, dappOS, RocketSwap, AuraOS, Ads3, Spartan OS, VEST. Uxhaso lwe-gas lwe-Bitget Wallet (7 Julayi). I-AC Wallet ye-AstraCore (26 Julayi). I-LayerZero nendinganiso ye-OFT (31 Julayi). Ukusekelwa kwama-subgraph e-The Graph (15 Septhemba). Umxhasi wezinga legolide e-TOKEN2049 Singapore, 7 kuya ku-8 Okthoba.

Ngasinye yisimemezelo se-Anubis Chain esinesixhumanisi esigabeni esithi Izindaba. Ukufakwa ohlwini kusayithi yedatha akusikho ukwesekwa; ukuxhumanisa kuyiqiniso lobuchwepheshe umfundi angakuhlola. Isimemezelo se-LayerZero uqobo besingakashicilelwa ngesikhathi leli khasi lakhiwa.

Umthombo: Isimemezelo esikhishwe kabusha ku-SpartanOS Resource Library, kusukela ngoJuni kuya kuSepthemba 2026

Iyini i-AWAKE?

Iphrojekthi yokuqala yohlelo lonke ezingeni lokusungulwa (genesis) ku-Anubis Chain. Ngo-13 Meyi 2026 yethula ipheya le-DAI/LGNS ku-RocketSwap nge-ILO ye-Capybara Launch, ne-pool yokuqala iphrojekthi ethi icishe ibe ngu-$163 wezigidi. I-Anubis ibiza leyo pool ngokuthi ihange le-liquidity leketango.

I-AWAKE yisibonelo esilandelwa yi-Spartan OS: iphrojekthi ye-Labs, ukwethulwa nge-Capybara, ipheya le-RocketSwap. I-NFT yayo iqanjwe epulaneni le-Q3 njengesazisi sedijithali seketango. Izibalo njengoba kushiwo yi-Anubis Chain.

Umthombo: Imibuzo Nezimpendulo eziyi-100 ze-Anubis Chain, okusemthethweni, Julayi 2026, Q66 no-Q73; Isimemezelo esikhishwe kabusha ku-SpartanOS Resource Library, 22 Julayi 2026

I-Anubis Labs iwakhetha futhi iwaxhasa kanjani amaphrojekthi?

I-Labs ichaza isikhwama sohlelo lonke esingu-$100 wezigidi nezimpahla zokukhuthaza eziyi-ANUBIS NFT ezingu-10,000, izinhlobo ezintathu zoxhaso (i-liquidity ye-DEX, ukufakwa ohlwini lwe-CEX, ukukhula komphakathi) kanye nesakhiwo se-3A: Accelerator, Alliance, Amplifier. Amaphrojekthi ewaqamba njengakhuliswe noma asekelwe: Capybara Launch, RocketSwap, GaleBridge, AstraCore, AWAKE, Spartan OS, VEST, Golden Pact. Izicelo ziya ku-bd@anubislabs.us.

Izinsiza zabagqugquzeli zibuye zicaphune ukuzibophezela okungu-$300 wezigidi kwe-Anubis Foundation; isibalo se-FAQ ngu-$100 wezigidi sesikhwama se-Labs. Kokubili kungokwephrojekthi uqobo. Imikhakha ehamba phambili: ingqalasizinda yobumfihlo, ama-ejenti e-AI, i-DeFi, i-RWA, i-SocialFi nokubikezela, ama-DEX nezikhwama, i-DePIN nezinkokhelo.

Umthombo: Imibuzo Nezimpendulo eziyi-100 ze-Anubis Chain, okusemthethweni, Julayi 2026, Q88 kuya ku-Q100

Luyini uhlelo lweminyaka emihlanu?

Izindlela ezinhlanu ezihamba ndawonye: ukuqhubeka nokuthuthukisa ingqalasizinda (i-mainnet, ama-bridge, i-explorer, izikhwama, i-liquidity ye-DEX, amathuluzi abathuthukisi); ukuhlanganisa i-AGI nama-ejenti e-AI ezinhlelweni zokusebenza ze-on-chain; ukwandisa i-RWA nezezimali ze-on-chain; ukukhulisa inethiwekhi yabathuthukisi yomhlaba wonke; ukwakha umnotho ohlakaniphile we-on-chain. Uhlelo lwe-Q3 2026 lwaqamba izindawo eziyisishiyagalombili zekota, kusukela ekusebenzisaneni kwawo wonke amaketango kuya ekuhlanganisweni kwe-AI ne-RWA.

Uhlelo luwuhlelo. Akukho kokuhlanu okunosuku, futhi impendulo ye-FAQ ngohlelo lwendlela isho izinto ezinhlanu ezifanayo ngamagama ahlukile. Sho okusekukhishiwe (iketango, ama-bridge, i-DEX, izinhlelo zokusebenza zokuqala) nokuhleliwe, ngokwehlukana.

Umthombo: SpartanOS Resource Library (t.me/SpartanOSLibrary), 1 Julayi 2026; Isimemezelo esikhishwe kabusha ku-SpartanOS Resource Library, 18 Agasti 2026

Ngingayithola mahhala i-gas?

Nge-Bitget Wallet, yebo, ngemingcele: kusukela ngo-7 Julayi 2026 i-Anubis Chain ixhasa ukudlulisa okungafika kokuthathu ngosuku ngaphandle kwe-gas ngaphakathi kwe-AnubisChain, okungeqi ku-0.1 gasDAI ngakunye, ekuthengiselaneni okufanelekayo okwenziwe ku-Bitget Wallet. Ukuthengiselana phakathi kwamaketango akufakiwe.

Umkhankaso woxhaso ungaphela; hlola ikhasi lomkhankaso lesikhwama. Kokunye konke, dlulisa amadola ambalwa e-DAI nge-bridge kanye, bese isikhwama siba ne-gasDAI eyanele izinkulungwane zokuthengiselana.

Umthombo: Isimemezelo esikhishwe kabusha ku-SpartanOS Resource Library, 7 Julayi 2026

Iyini i-AC Wallet?

I-AstraCore Wallet, isikhwama se-AGI-Web3 esahlanganisa i-AnubisChain ngo-26 Julayi 2026. I-Spartan OS isibiza ngokuthi uzakwethu wesikhwama onconywe ngokusemthethweni futhi oyisu we-AnubisChain. Ukulanda okusemthethweni kwe-iOS ne-Android: api.astracorewallet.app/website/download, njengoba kushicilelwe yi-Anubis Chain. I-Anubis ithe izokwakha izingxenye zokuxhumana kwezenhlalo ze-Web3 ne-AstraCore esikhundleni sohlelo lokusebenza oluhlukile.

Ngakho-ke izikhwama ezimbili zinconywa ezinsizeni ezisemthethweni: i-Bitget Wallet (iketango lifakiwe ngaphakathi, uxhaso lwe-gas) ne-AC Wallet (uzakwethu wamasu, isango lemikhankaso). I-airdrop ye-AC Carnival engu-1,000,000 DAI yaqhubeka kusukela ngo-12 Agasti kuya ku-11 Septhemba futhi isiphelile; isikhuthazo sansuku zonke esingu-30,000 DAI samenyezelwa ngo-8 Septhemba. Ungathembisi noma yimuphi umkhankaso; hlola okwamanje.

Umthombo: Isimemezelo esikhishwe kabusha ku-SpartanOS Resource Library, 26 no-29 Julayi, 8 Septhemba 2026

Ingabe ukhona umhlahlandlela we-AI osemthethweni we-Anubis Chain?

Yebo. Ngo-7 Agasti 2026 i-Anubis Chain ne-DappOS bashicilela ikhasi le-AI lemibuzo nezimpendulo elimayelana ne-mainnet, izikhwama, ukuphepha, ubumfihlo, i-swap ne-bridge, elinezimpendulo ezithathwe emithonjeni egunyazwe yiphrojekthi: anubis-ai-web-production.up.railway.app. Umsizi waleli khasi wenza okufanayo nge-Spartan OS.

Thayipha ikheli esikhundleni sokulilandela usuka engxoxweni, futhi uthathe lokho elikushoyo njengombono wephrojekthi. Kunoma yini edlulisa imali, i-explorer namakhasi e-bridge esemthethweni ahlala eyizinto zokubhekisela.

Umthombo: Isimemezelo esikhishwe kabusha ku-SpartanOS Resource Library, 7 Agasti 2026

Ingabe ikhona inethiwekhi yokuhlola yabathuthukisi?

Yebo. I-chain ID 202601, i-RPC ne-explorer ku-cheras-rpc.anubispace.org, amathokheni okuhlola avela enkontilekeni yokwabela amathokheni ngokucela kumlawuli. Imibhalo yabathuthukisi itholakala ku-github.com/anubis-chain/docs. I-Solidity 0.8.x ne-Vyper ziyasekelwa; i-Remix, Hardhat ne-Foundry kusebenza njengaku-Ethereum.

Umthombo: Imibuzo Nezimpendulo eziyi-100 ze-Anubis Chain, okusemthethweni, Julayi 2026, Q70 kuya ku-Q72

Ingabe iketango lake lagqekezwa?

I-Anubis Chain ithi kusukela kwethulwa i-mainnet ngo-8 Ephreli 2026, iketango nezinkontileka zalo ze-bridge ezisemthethweni akukho nokukodwa okwake kwagqekezwa ngempumelelo, futhi ayikho impahla yabasebenzisi eyake yalahleka ngenxa yephutha lenkontileka noma ukuhlasela kwenethiwekhi. I-CertiK ne-Armor bahlola izinkontileka eziyinhloko ezingu-137 (kwamenyezelwa ngo-13 Julayi 2026).

Irekhodi elihlanzekile lezinyanga ezinhlanu liyiqiniso elimayelana nezinyanga ezinhlanu. Ama-bridge ahlala eyingxenye ehlaselwa kakhulu embonini; i-FAQ uqobo ibala izivikelo ze-bridge (ukuhlolwa kwemilayezo, imingcele yansuku zonke, uhlu lwabavunyelwe, ukumiswa okuphuthumayo) futhi isayala abasebenzisi ukuthi baqale bahlole ngenani elincane.

Umthombo: Imibuzo Nezimpendulo eziyi-100 ze-Anubis Chain, okusemthethweni, Julayi 2026, Q78 no-Q79; Isimemezelo esikhishwe kabusha ku-SpartanOS Resource Library, 13 Julayi 2026

I-Anubis Foundation, i-Anubis Labs, i-Anubis Chain: ubani owenzani?

Amagama amathathu, iqembu elilodwa. I-Anubis Foundation yinhlangano: yakha i-Origin (LGNS), i-WebKey ne-Melos, kwathi ngemuva kwalokho yakha i-Layer 1 yayo. I-Anubis Chain yileli ketango: i-mainnet kusukela ngo-Ephreli 2026, i-chain ID 6714, izinkokhelo nge-gasDAI, i-explorer ku-browser.anubispace.org. I-Anubis Labs yingxenye yokukhulisa nokuxhasa ekhetha futhi ixhase amaphrojekthi eketangweni; i-Spartan OS iyiphrojekthi yayo yokuqala yabasebenzisi.

Uma umuntu ebuza ukuthi ubani ongemuva kwe-Spartan OS, phendula ngalolu hlelo: inhlangano enomlando, iketango eliphethwe yiyo, nengxenye exhasa okusebenza kulo. Umlando oshicilelwe wenhlangano yiminyaka emibili, amazwekazi amahlanu, amazwe angamashumi amabili namaphrojekthi angaphezu kwekhulu, kanye nokuzibophezela okungu-$300 wezigidi ohlelweni lonke (isibalo sangaphambili sasingu-$100 wezigidi); umbhalo othi Imibuzo eyi-100 uchaza abathuthukisi beketango njengeqoqo elingaziwa. Iziteshi ezisemthethweni: anubischain.ai, @AnubisChainL1 (eyinhloko kusukela ngo-16 Septhemba), @ANUBISCHAIN_ (irekhodi langaphambili), @Anubis_Labs, anubislabs.us, i-AC Wallet ne-Resource Library.

Umthombo: Isethulo sabagqugquzeli v14.2, amaslayidi 2 kuya ku-4; Imibuzo Nezimpendulo eziyi-100 ze-Anubis Chain, Julayi 2026; amakhasi e-Anubis Labs

Uthini umlando we-Anubis Foundation?

Origin (LGNS): esithombeni sedatha se-AVE abanikazi abangu-2.5 wezigidi, inani lemakethe elijikelezayo elingu-$1.4 wezigidigidi, i-pool engu-$200 wezigidi nokuthengiselana okungu-91,000 ngosuku olulodwa; ngemuva kweminyaka emibili, cishe u-$55 wezigidi usekhona ku-pool ye-Origin ku-Polygon. WebKey ne-Melos: abasebenzisi abangu-16 wezigidi, njengoba kushiwo. Awake: olunye uhlelo lokusebenza kukhodi efanayo. Anubis Chain: ukuthengiselana okungaphezu kuka-100 wezigidi, amakheli angu-18 wezigidi nezinkontileka ezingu-16,000 ngoSepthemba 2026, ukuhlolwa kwezinkontileka eziyinhloko ezingu-137 yi-CertiK ne-Armor, ukuhlolwa kwe-GaleBridge yi-CertiK, uhlu lozakwethu oluhlanganisa i-Bitget Wallet, DappOS, GoPlay, The Graph ne-LayerZero, nokuxhasa ezingeni legolide e-TOKEN2049 Singapore ngo-Okthoba 2026.

Zonke izibalo ngezephrojekthi uqobo ngaphandle kwalezo ezitholakala ku-explorer yomphakathi: i-pool ye-Origin ku-Polygon, inani lokuthengiselana leketango, izinqolobane ze-bridge ku-Etherscan nokuhlolwa ku-skynet.certik.com. Sho ukuthi yikuphi okuyikuphi. Okungekho obala: amagama abantu, inhlangano ekhethe ukungawashicileli.

Umthombo: Isethulo sabagqugquzeli v14.2, amaslayidi 2 kuya ku-4; imibiko yedatha ye-Anubis Chain, kusukela ngo-Agasti kuya kuSepthemba 2026; isigaba esithi Izindaba

Ingabe ikhona imitapo yezinsiza esemthethweni ngezinye izilimi?

Emihlanu ku-Telegram, ebhalwe yi-akhawunti yesevisi ye-Spartan OS ngo-26 Septhemba 2026: isiNgisi @SpartanOSLibrary, isiShayina @SpartanOSResourceLibraryCN, isiKorea @SpartanOSKoreanLibrary, isiJapane @SpartanOSJapaneseLibrary nesiVietnam @SpartanOSVietnameseLibrary, kanye nomtapo wesiShayina ku-DeBox. Yonke isesigabeni esithi Izixhumanisi.

Thumela ilungu elikhuluma isiKorea noma isiVietnam umtapo walo esikhundleni senguqulo yowakho. Izinsiza zesiHindi zathenjiswa yiphrojekthi ngo-25 Septhemba futhi azikashicilelwa; zize zishicilelwe, umtapo wesiNgisi yiwona okokubhekisela e-India.

Umthombo: I-akhawunti yesevisi ye-Spartan OS, 26 Septhemba 2026; ikheli ngalinye livulwe futhi lahlolwa ngalolo suku

Spartan OS

Uhlelo lokusebenza lokuqala: izinhlelo ezinhlanu, amathokheni amabili, i-TempleRaid.

Iyini i-Spartan OS, ngamafuphi?

Uhlelo lokusebenza lokuqala ku-Anubis Chain, olwakhiwe yi-Anubis Labs ukuze lunike abantu isizathu sokusebenzisa iketango namuhla futhi babuye kusasa. Amathokheni amabili, i-RM ne-GD. Umdlalo osebenzayo, i-TempleRaid. I-staking ekhokhwa njalo emahoreni angu-12. Kusebenza kusukela ngo-16 Juni 2026.

Iqembu liyichaza njengesistimu yokusebenza yokuzijabulisa kwe-on-chain ne-AI: izinhlelo ezinhlanu ezabelana ngabasebenzisi, amathokheni nokusabalalisa. Ezimbili ziyasebenza (isango labasebenzisi, nge-TempleRaid, ne-Agent Token Hub, nge-RM, GD ne-Token Router); ezintathu zihleliwe (ukusabalalisa kwe-AI, injini yokucubungula, inethiwekhi yabathuthukisi).

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 5; Incazelo ebanzi, Septhemba 2026, Ingxenye III

Yiziphi izinhlelo ezinhlanu ze-Spartan OS, futhi yiziphi ezisebenzayo?

Ezisebenzayo: isango labasebenzisi (TempleRaid) ne-Agent Token Hub (RM, GD ne-Token Router). Ezihleliwe: ukusabalalisa kwe-AI, injini yokucubungula nenethiwekhi yabathuthukisi. Sho ukuthi ezimbili ziyasebenza, ezintathu zihleliwe. Lokho kuyindawo eqinile kunokusikisela ukuthi zonke ezinhlanu zikhona.

Isango liyimidlalo nezinhlelo zokusebenza ze-on-chain ezakhelwe ukuthi abantu babuye kaningi. Ukusabalalisa kwe-AI kuyisendlalelo sokuncoma esibeka uhlelo lokusebenza olulandelayo olufanelekile phambi komsebenzisi. Injini yokucubungula ihlanganisa amandla okucubungula emisebenzi ye-AI. I-Agent Token Hub yilapho ama-ejenti e-AI enziwa khona, aguqulwe abe ngamathokheni, abizwe futhi kuxazululwe izinkokhelo zawo. Inethiwekhi yabathuthukisi iletha amaqembu abantu besithathu ku-Anubis nge-Spartan OS. Azikho izinsuku ezimenyezelwe zalezi ezintathu ezihleliwe.

Umthombo: Incazelo ebanzi, Septhemba 2026, Ingxenye III; umdwebo wolwazi we-Spartan OS, Juni 2026

Kuyini i-RM ne-GD?

I-RM yithokheni lohlelo lonke: ithokheni olithola, olenza ngalo uku-stake, olisebenzisa ezinhlelweni zokusebenza futhi olihwebelana ne-USDT ku-RocketSwap. I-GD yithokheni lokubusa: amayunithi angu-390,000, amisiwe, anamalungelo okuvota ku-Spartan OS. Kokubili kuyamukelwa ku-TempleRaid.

Lokhu kwahlukaniswa kwenziwa ngamabomu. Inkundla esebenzisa ithokheni elilodwa kokubili ukusebenzisa imali nokubusa igcina inesigungu sokubusa esishintsha njalo lapho intengo inyakaza. I-RM iyajikeleza; i-GD, enesamba esikhona esincane esimisiwe, ihlala kubantu abanentshisekelo yesikhathi eside. I-GD itholakala emakethe evulekile noma nge-airdrop engu-3% yebhondi lokushisa. Amakheli ezinkontileka: RM 0x2e04…e59d, GD 0x21b6…1b4c, aphelele ngaphansi kokuthi Imigomo yanamuhla futhi ahlolwe ku-explorer ngo-24 Septhemba 2026.

Umthombo: Incazelo ebanzi, Septhemba 2026, Ingxenye V

Ideshibhodi ye-Spartan OS yabonisani ngo-14 Septhemba 2026?

$29 wezigidi USDT ku-pool ye-liquidity ye-RM, abanikazi be-RM abangu-500,000, u-68% wesamba esikhona se-RM ukwi-staking on-chain, i-treasury engu-$10 wezigidi USDT, isamba esikhona se-RM 6.1 wezigidi. I-RM yavula ngo-$18.85 ngo-16 Juni futhi kwashiwo ukuthi ingaphezu kuka-$30; i-GD yavula ngo-$40 ngo-4 Meyi futhi kwashiwo ukuthi ingu-$16,000.

Sho kabili ukuthi u-68% ukwi-staking. Kusho ukuthi amathokheni amabili kwamathathu akhiyiwe futhi ayakhiqiza esikhundleni sokulinda ukuthengiswa. Leso yisibalo umngabazi angeke aphikisane naso. Zonke izibalo njengoba kushiwo yi-Spartan OS ngo-14 Septhemba 2026; hlola i-explorer, i-DEX ne-dApp ukuze uthole amanani anamuhla.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 5; umbiko we-Spartan OS, 14 Septhemba 2026

Iyini i-TempleRaid?

Uhlelo lokusebenza lokuqala lwe-Spartan OS, olwethulwa ngo-6 Septhemba 2026 nozakwethu wemidlalo i-GoPlay. Umzuliswano we-on-chain wemizuzwana engamashumi ayisithupha: xhuma isikhwama, khetha impahla (RM, GD noma enye impahla yohlelo lonke), ngena, bese umphumela unqunywa ngokungahleleki okungahlolwa futhi uxazululwe ku-Anubis Chain. Noma ubani angahlola noma yimuphi umzuliswano ku-explorer.

Umdlalo ulula ngamabomu: awukho umlingiswa okhuliswayo, akukho mpahla eqoqwayo, asikho isifundo. Ubunkimbinkimbi buseketangweni. Sho lokhu njalo: imidlalo yenhlanhla inobungozi, futhi umdlali angalahlekelwa yilokho akufakile. Akukho ku-TempleRaid okuyisithembiso senzuzo.

Umthombo: Incazelo ebanzi, Septhemba 2026, Ingxenye IV; Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Umhlahlandlela 12

Iyini i-Token Router?

Indlela esebenza ngemuva kwe-Agent Token Hub. Umakhi uguqula i-ejenti ye-AI ibe yisevisi enethokheni layo; i-Token Router ixhumanisa ukwakhiwa, ukukhishwa kwethokheni, ukubizwa, ukuxazululwa kwezinkokhelo nezikhuthazo kube yindlela eyodwa, konke kurekhodwe ku-Anubis Chain. Uma i-ejenti ithola imali, imali engenayo iya kubanikazi bethokheni.

Namuhla isevisi ye-AI iwukubhalisa okukhokhelwa njalo noma ukhiye we-API: imali igcina enkampanini. I-Token Router ithatha indawo yalokho ngethokheni. Kumenyezelwe ku-akhawunti ye-X ye-Spartan OS; indlela esebenza ngayo ngaphezu kwezigaba ezinhlanu ayikashicilelwa. Chaza okumenyezelwe bese uma lapho.

Umthombo: Incazelo ebanzi, Septhemba 2026, Ingxenye IV

Kungani umdlalo weza kuqala?

Yonke inkundla eyaphumelela kubasebenzisi yafika lapho ngento abantu ababeyenzela ukuzijabulisa. Umdlalo unikeza ukuxhumana okuphindaphindwayo, isithiyo esiphansi nomjikelezo wempendulo osheshayo. Umzuliswano ngamunye ungukuthengiselana, ukuthengiselana ngakunye kuyiphuzu ledatha lesendlalelo sokusabalalisa, futhi umdlali ngamunye obuyayo ungumsebenzisi uhlelo lokusebenza olulandelayo oluzomthola njengefa.

I-GoPlay yaletha izethameli ezikhona nokusabalalisa; i-Spartan OS yaletha iketango, amathokheni nokuxazululwa kwezinkokhelo. Yileyo ndlela abasebenzisi bokuqala abafika ngayo ngaphandle kokuqala ngeze.

Umthombo: Incazelo ebanzi, Septhemba 2026, Ingxenye IV

Kungani manje? Yisiphi isizathu sesikhathi?

I-Anubis Chain inohlelo lokusebenza olulodwa lwabasebenzisi namuhla, futhi uhlelo lwendlela luqamba olwesibili nolwesithathu. Abaholi abakha manje bazuza wonke umsebenzisi oyolethwa yilezo zinhlelo zokusebenza. Ukuba nezinsuku ezingu-90 ubudala, njengoba isethulo sisho, akusikho ukuphuza ngezinsuku ezingu-90.

Ungakuweqisi ukukhuluma ngokushoda. Kusho kanye: uhlelo lokusebenza lwesibili luyeza, futhi abantu abakhe amaqembu abo ngaphansi kolokuqala yibo abazofikelwa yilo. Izinsuku zohlelo lwesibili nolwesithathu ziyohlolwa yiphrojekthi.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 12

Yini esohlelweni lwendlela, futhi yini enosuku?

Isigaba sokuqala, manje: i-mainnet (Ephreli 2026), i-RM ne-GD (kuyasebenza), i-TempleRaid ne-GoPlay (6 Septhemba 2026), ukusabalalisa kwe-AI (akukho suku). Isigaba sesibili: izinhlelo zokusebenza zesibili nezesithathu, inethiwekhi yesevisi yokucubungula nohlelo lwabathuthukisi, azikho izinsuku. Isigaba sesithathu: injini yokucubungula njengengqalasizinda yeketango lonke.

Lapho izinsiza zikhombisa [usuku], alukho usuku olumenyezelwe. Ungakugcwalisi. Umgqugquzeli osho usuku iphrojekthi engalunikanga wenza isithembiso egameni lephrojekthi.

Umthombo: Incazelo ebanzi, Septhemba 2026, Ingxenye VI

I-Spartan OS iphakathi kwaziphi izimakethe?

Amasango okuzijabulisa ngakolunye uhlangothi (Steam: abasebenzisi abasebenzayo nyanga zonke abangu-132 wezigidi) namathokheni ama-ejenti e-AI ngakolunye ($3.4 wezigidigidi inani lemakethe lesigaba kanye no-$780 wezigidi umthamo wansuku zonke ngesikhathi sesethulo se-Spartan OS). Izibikezelo zomkhakha zibeka imakethe ye-AI ku-$3.5 wamathriliyoni ngo-2033.

Lezi yizibalo zesimo, hhayi izibalo ze-Spartan OS. Zichaza ubukhulu bamakamelo efuna ukuba kuwo. 'Imakethe ye-AI izoba ngu-$3.5 wamathriliyoni' kuyiqiniso ngemakethe ye-AI, hhayi iqiniso nge-RM. Hlola isibalo samanje ngaphambi kokucaphuna esisodwa.

Umthombo: Incazelo ebanzi, Septhemba 2026, Ingxenye VI (imithombo njengoba icashunwe yi-Spartan OS)

Lithini iphepha elimhlophe le-Spartan OS, ngamafuphi?

I-Web3 isuka kunethiwekhi yezimpahla iya kunethiwekhi yezinhlelo zokusebenza, futhi ezokuzijabulisa ziwumnyango wokungena osetshenziswa kaningi kakhulu. I-Spartan OS yakhiwe njengamakhono amahlanu ku-AnubisChain: indlela yokungena yezokuzijabulisa, injini yokukhula ye-AI, isizinda sama-ejenti e-AI namathokheni, injini yokubala ye-AI kanye nomkhakha wabathuthukisi, phezu kwezendlalelo eziyisithupha zobuchwepheshe. Amathokheni amabili: i-GD yokubusa, i-RM yezikhuthazo. Izigaba ezinhlanu zohlelo lwendlela, akukho nesisodwa esinosuku.

Isigaba sobungozi sephepha ngokwalo sithi inkundla kufanele igweme ukuzibophezela ngemali engenayo futhi idalule ubungozi. Sebenzisa lowo musho uma othile ebuza ukuthi iphrojekthi ithembisani: iphepha elimhlophe lithembisa isakhiwo, hhayi inzuzo. Idokhumenti egcwele isesigabeni esithi Amadokhumenti asemthethweni.

Umthombo: Iphepha elimhlophe le-Spartan OS, okusemthethweni, 2026

Kuqukethe ini isethulo esisemthethweni se-Spartan OS?

Amaslayidi angamashumi amathathu nanye avela kuphrojekthi: ukuthi iyini i-Spartan OS, izinhlelo ezine (isango, ukukhula, isevisi, ukubala), i-AnubisChain njengesisekelo (i-Layer 1 yobumfihlo, ubufakazi be-PLONK, i-EVM, izindleko eziphansi), injini yokubala ye-AI, umjikelezo wenani, isimo semakethe nemithombo yaso, i-Steam ne-Hugging Face njengezibonelo zangaphambili, inethiwekhi yabakhi, izinkomba zokukhula, izinhlobo ezinhlanu zempahla kanye nohlelo lwendlela lwezigaba ezintathu.

Lesi yisethulo seprojekthi; isethulo sabagqugquzeli kuleli khasi yinguqulo yamaslayidi angu-13 eyakhelwe i-Zoom. Ethula esisemthethweni kuzethameli zezobuchwepheshe noma zezikhungo. Izibalo zemakethe ezikuso ziyizilinganiso zezinkampani zangaphandle njengoba zicashunwe yi-Spartan OS.

Umthombo: Isethulo esisemthethweni se-Spartan OS, amaslayidi angu-31, 2026

Uhlangothi ngalunye luletha ini ekubambisaneni kwe-Anubis × Spartan?

I-AnubisChain inikeza ukuphepha, ubumfihlo, ubuhlakani, izimpahla, ubuchwepheshe nezinsiza zomhlaba wonke: iketango, ubufakazi, ama-bridge, i-DEX, i-Labs nenethiwekhi yabalingani. I-Spartan OS inikeza abasebenzisi, izinhlelo zokusebenza, amasevisi, ikhono lokubala, abathuthukisi nokukhula kwemakethe: indlela yokungena yezokuzijabulisa, isizinda samathokheni, umdlalo, umphakathi. Iketango elilodwa, uhlelo olulodwa lokusebenza, njengoba isithombe esichazayo sisho.

Umthombo: Umtapo wezinsiza we-SpartanOS (t.me/SpartanOSLibrary), 9 Julayi 2026

I-Spartan OS iyichaza kanjani ngokusemthethweni i-GD ne-RM?

GD: ithokheni lokubusa, isamba sonke esingu-390,000, elisetshenziselwa ukuvota kokubusa kwenkundla, ukulungisa amapharamitha ephrothokholi, ukuxazululwa kwemakethe yokubikezela nokuthwebula inani lomkhakha; libekwe njengelungelo lokubusa lesikhathi eside nomthwali omkhulu wenani. RM: ithokheni lokusetshenziswa nelemiklomelo elikhishwa yinjini yezikhuthazo esebenzisa i-algorithm ezivumelanisayo, elisetshenziselwa imiklomelo yokubamba iqhaza, izinzuzo zezinhlelo zokusebenza, amabhonasi omnikelo emphakathini, izikhuthazo zemisebenzi nemiklomelo yokukhula.

I-GD iphethe amalungelo esikhathi eside; i-RM ijikeleza nsuku zonke. Amaphuzu e-AICS nenjini yezikhuthazo ye-TriZone kuhlala eceleni kwala mathokheni amabili. Isithombe esichazayo sangomhla ka-26 Juni 2026 nesahluko 5 sephepha elimhlophe kusho into efanayo.

Umthombo: Umtapo wezinsiza we-SpartanOS (t.me/SpartanOSLibrary), 26 Juni 2026; Iphepha elimhlophe le-Spartan OS, okusemthethweni, 2026, isahluko 5

Isamba se-GD esingu-390,000 sabiwa kanjani?

Uhlelo lwetshe legumbi lwe-Genesis 35%, ukukhululwa ngezigaba. Izikhuthazo ze-liquidity 25%, zikhululwa ngomjikelezo wezikhuthazo ze-LP. Imiklomelo yomkhakha we-DAO 10%, ukukhululwa ngokulinganayo eminyakeni emihlanu. Iqembu nabanikeli abayinhloko 10%, izinyanga ezingu-12 zokungakhululwa lutho bese kuba izinyanga ezingu-36 ngokulinganayo. Isikhwama somkhakha 10%, sikhululwa ngokubusa kwe-DAO uma kudingeka. Abalingani bamasu 5%, izinyanga ezingu-24 ngokulinganayo. Isigodlo se-treasury yesivumelwano 5%, asijikelezi.

I-10% yeqembu ayikwazi ukunyakaza unyaka owodwa bese ithatha eminye iminyaka emithathu ukuze idluliseleke, njengoba kushiwo. Ikhasi 5 lokuhlaziywa kwemodeli yezomnotho. Izimpendulo zokuhlolisisa zangomhla ka-24 Septhemba 2026 zengeza ukuthi amalungelo e-GD ahlobene nesikhwama sokuzinza se-RM avela kulesi sabelo sokuqala, isabelo se-25% sezikhuthazo ze-liquidity, akhululwa ngokulinganayo emasontweni angu-30, nokuthi isigodlo se-treasury esingu-5% siyisigodlo sobungozi; inani eliphezulu elingu-390,000 alinyakazi.

Umthombo: Ukuhlaziywa kwemodeli yezomnotho kwe-Spartan OS, isethulo esisemthethweni, 2026, ikhasi 5

Iyini iphrojekthi ye-Genesis Foundation ne-Genesis NFT?

Uhlelo lwabahlanganyeli bokuqala: ama-Genesis NFT angu-10,000 emhlabeni wonke, anezigaba ezine nesiphindaphindi somjikelezo esihlosiwe sesigaba ngasinye: S1 Pioneer 3.5×, S2 Guardian 4.0×, S3 Vanguard 4.5×, S4 Spartan Elite 5.0×. Amalungelo ashiwo: i-airdrop yokubusa ye-GD, ukufaneleka okuphambili ku-DAO, isimo selungu elingumsunguli, imiklomelo yomphakathi enesisindo, ukuqala kuma-airdrop, izaphulelo ezikhethekile.

Ukuthi isigaba sitholakala kanjani nokuthi isiphindaphindi sisebenza kuni akuchazwanga ekhasini. Lolu hlelo lwaxhasa isikhwama sokuzinzisa intengo ngoJulayi 2026. Ikhasi 8 lokuhlaziywa kwemodeli yezomnotho.

Umthombo: Ukuhlaziywa kwemodeli yezomnotho kwe-Spartan OS, isethulo esisemthethweni, 2026, ikhasi 8

Siyini isikhwama sokuzinzisa intengo?

Isikhwama esingu-1,000,000 USDT, esabelwa ngomhla ka-10 Julayi 2026 emzuliswaneni wesi-3 wohlelo lwe-Genesis Foundation, esizosetshenziswa kuphela ukuzinzisa intengo yemakethe ye-RM, ukuthuthukisa i-liquidity nokuthatha isinyathelo ngesikhathi sokuguquguquka okungajwayelekile. Ikheli elishicilelwe: 0x2aF89Eb5c0b8c689845E8Ae5bd15c03072F00635. I-Foundation ithi isebenza ngaphansi kwemithetho yohlelo futhi yamukela ukwengamelwa yi-DAO nomphakathi.

Isikhwama sokuzinzisa yimali iphrojekthi engayisebenzisa emakethe; asiyona into egcina intengo ingehli ngaphansi kwezinga elithile, futhi isimemezelo asisho ukuthi iyiyo. Umfundi angabuka ikheli ku-explorer.

Umthombo: Isimemezelo esiphinde sashicilelwa emtapweni wezinsiza we-SpartanOS, 10 Julayi 2026

Iyini i-pool yezikhuthazo zokushaja?

I-pool ye-airdrop eyamenyezelwa ngomhla ka-4 Agasti 2026. Abasebenzisi abanokubamba iqhaza okukodwa okudlula u-200 USDT ku-staking yesikhathi eside yezinsuku ezingu-360 noma 540, emabhondini ezinsuku ezingu-360 noma 540, noma esikhwameni sokuzinza se-RM (2.5×) bafanelekela ama-airdrop angahleliwe avela kulokho isimemezelo esikubiza ngokuthi i-pool yezikhuthazo zokuthenga phansi. Isikhathi nemithetho kunqunywa yisimemezelo esisemthethweni.

Okungahleliwe kusho okungahleliwe. Kwethule njengethuba elihambisana namaphozishini esikhathi eside, ungalokothi ukwethule njengezinga. Amakhasi emisebenzi e-dApp aqukethe imithetho yamanje.

Umthombo: Isimemezelo esiphinde sashicilelwa emtapweni wezinsiza we-SpartanOS, 4 Agasti 2026

I-Spartan OS isihloliwe yini?

Yebo. I-Anubis Labs yamemezela ngomhla ka-2 Agasti 2026 ukuthi i-Spartan OS iphothule ukuhlolwa kokuphepha kwe-CertiK okuhlanganisa i-multisig yokubusa, i-treasury, i-staking, ukwabiwa kwemiklomelo nama-smart contract amathokheni ayinhloko: akukho okutholakele okubucayi, akukho okukhulu, futhi zonke izinto ezintathu ezisezingeni eliphakathi zixazululiwe.

Izinsiza zabagqugquzeli zangaphambilini zathi ukuhlolwa sekuthunyelwe; isimemezelo sokuphothulwa siyakuthatha indawo. Cela isixhumanisi sombiko ku-skynet.certik.com ngaphambi kokuphinda umphumela kumuntu ongabazayo.

Umthombo: Isimemezelo esiphinde sashicilelwa emtapweni wezinsiza we-SpartanOS, 2 Agasti 2026

Kusho ukuthini 'osekelwa umshwalense' ku-TempleRaid?

I-Spartan OS ibiza i-TempleRaid ngokuthi ngumdlalo wokuqala ongapheli osekelwe eketangweni futhi osekelwa umshwalense: izikwele ezingu-25, umzuliswano wemizuzwana engamashumi ayisithupha, ukungahleleki okwenzeka on-chain, nomugqa othi 'uyahlulwa kodwa uhlale uvikelwe yindlela yomshwalense'. Ukuthi umshwalense ubuyisela malini, nokuthi uvela kuyiphi i-pool, akukashicilelwa ezinsizeni ezitholakala lapha.

Ungasigcwalisi isikhala. Sho lokho isimemezelo esikushoyo nokuthi imigomo yale ndlela ngeyokushicilelwa yiphrojekthi. Umdlalo wenhlanhla onomshwalense oyingxenye usewumdlalo wenhlanhla. Izimpahla ezamukelwayo: RM, GD, DAI, USDT.

Umthombo: Isimemezelo esiphinde sashicilelwa emtapweni wezinsiza we-SpartanOS, 3 no-5 Septhemba 2026

Iyini i-DappOS, futhi yayiyini i-airdrop ye-DOS?

I-DappOS ingumlingani we-AGI wamasu we-Anubis Chain ne-Spartan OS. NgoAgasti 2026 i-Spartan OS yaqhuba i-airdrop yethokheni le-DappOS, i-DOS, yamaphozishini esikhathi eside: i-staking noma amabhondi ezinsuku ezingu-360 kusukela ku-500 USDT kwathola okwengeziwe okungu-1.5% nge-DOS, ezingu-540 kwathola u-3%, ngokuphindaphindiwe kuka-500 USDT. Yavalwa ngomhla ka-31 Agasti. I-DOS yafakwa ohlwini ngomhla ka-11 Agasti ku-Upbit, Binance Alpha, Bitget, OKX ne-Gate, njengoba kwamenyezelwa.

Umkhankaso ovaliwe ngumlando, hhayi isethulo. Wusho njengesibonelo salokho amaphozishini esikhathi eside akutholile, futhi usho ngokucacile ukuthi ayikho i-airdrop yesikhathi esizayo esimenyezelwe.

Umthombo: Isimemezelo esiphinde sashicilelwa emtapweni wezinsiza we-SpartanOS, 1, 3, 4, 11 no-31 Agasti 2026

Yiziphi izibalo zakamuva ze-liquidity?

5 Septhemba 2026: i-liquidity ye-RM/USDT ingu-28,153,200 USDT, isigodlo somkhakha singu-4,000,000 USDT, i-RM kushiwo ukuthi yayingu-$25.122 yakhuphukela ku-$29.9639. 13 Septhemba: i-liquidity icishe ibe ngu-29.03 wezigidi USDT, isigodlo singu-4 wezigidi, isisekelo semali sisonke kushiwo ukuthi singu-33 wezigidi+, i-RM ibuyele ngaphezu kuka-$30 ngemuva kokwehla isuka ku-$32.84 iya ku-$25.12. Ukwaziswa kwangomhla ka-14 Septhemba kwabeka i-pool ku-$29 wezigidi.

Okuthunyelwe okufanayo kubeka nezinhloso: u-$33 wezigidi olandelayo, u-$90 kuya ku-$100 wezigidi ekupheleni konyaka, i-RM ku-$40 nase-$50. Inhloso iyisifiso seprojekthi, hhayi isibalo; caphuna izibalo nezinsuku zazo bese ushiya izinhloso ngaphandle. I-liquidity ebukhoma itholakala ku-geckoterminal.com nasekhasini le-pool le-RocketSwap.

Umthombo: Isimemezelo esiphinde sashicilelwa emtapweni wezinsiza we-SpartanOS, 5 no-13 Septhemba 2026

Iphrothokholi yokukhulula amandla isebenza kanjani?

Uma kwenziwa uku-claim kwemiklomelo yomphakathi iye ku-pool ye-turbo, amandla asetshenziswa ngesilinganiso esingu-1:1: umsebenzisi angakhulula imiklomelo efika emandleni anawo. Amandla avela ku-staking yesikhathi eside (iphozishini yezinsuku ezingu-360 inenani lamandla elingu-150%, iphozishini yezinsuku ezingu-540 ingu-200%) noma ekushiseni amathokheni, okuzuzisa amandla ebangeni isethulo esilinikeza njengo-200% kuya ku-600%, elibekwa ngokuguquguqukayo.

I-150% ne-200% kuleli khasi sekuthathelwe indawo: ngomhla ka-26 Septhemba 2026 iphrojekthi yathi amapharamitha e-dApp abukhoma yiwona okokubhekisela kokugcina (i-staking yamandla 260%, ukushiswa kwe-RM 557% ngalolo suku, kokubili kuyaguquguquka futhi kungalungiswa yiphrothokholi) nokuthi akukho leli khasi noma ibanga lokuphindwa ka-2 kuya ku-6 ezimpendulweni zokuhlolisisa okufanele kukweqe. Ikhasi 17 lokuhlaziywa kwemodeli yezomnotho, eligcinelwe indlela esebenza ngayo, hhayi iziphindaphindi.

Umthombo: Ukuhlaziywa kwemodeli yezomnotho kwe-Spartan OS, isethulo esisemthethweni, 2026, ikhasi 17

Iyini i-pool yokuhweba ye-turbo?

Igama elisemthethweni lalokho abagqugquzeli abakubiza ngokuthi i-turbine. Imiklomelo ye-rebase neyomphakathi ifakwa ku-pool yokuhweba ye-turbo uma itholakala; iphrothokholi ithenga i-RM ngokuzenzakalelayo ngesilinganiso esingu-1:1 ngemiklomelo etholiwe, futhi amathokheni athengiwe ayakhiywa uma ukuthenga sekuphothulwe. Yonke inkokhelo iba wukuthenga.

Umthombo: Ukuhlaziywa kwemodeli yezomnotho kwe-Spartan OS, isethulo esisemthethweni, 2026, ikhasi 19

Ngokusemthethweni, inkokhelo yokuthengisa engu-5% iyaphi?

Ukuthenga 0%, ukuthengisa 5%, kwabiwe izingxenye ezine: 0.5% isikhwama senkundla (ukusebenza nokunakekelwa kobuchwepheshe), 1.2% isikhwama sokuthenga kabusha (ukuthenga kabusha nokushisa i-GD ne-RM), 1.3% isikhwama sokuthuthukisa umphakathi, 2.0% isikhwama somkhakha (izigodlo nokwandisa). Isilinganiso esizenzakalelayo sokuthenga kabusha: GD 0.6%, RM 0.6%, singalungiswa ngokwesimo semakethe.

Umthombo: Ukuhlaziywa kwemodeli yezomnotho kwe-Spartan OS, isethulo esisemthethweni, 2026, ikhasi 20

Ithebula lezikhundla elisemthethweni lithini?

Ikhasi le-Spartan OS ngokubuka kanye libala izikhundla eziyishumi nambili ngokuphatha komuntu siqu, abangeniswe ngqo, umthamo womphakathi nebhandi lomklomelo: V1 500 USDT, abangeniswe ngqo abangu-3, umphakathi ongu-10,000, 5% kuya ku-10%; V2 1,500, 4, 50,000, 8% kuya ku-15%; V3 3,000, 5, 150,000, 10% kuya ku-20%; V4 5,000, 6, 300,000, 15% kuya ku-25%; V5 7,000, 8, 600,000, 20% kuya ku-35%; V6 9,000, 10, 1,200,000, 25% kuya ku-45%; kuze kufike ku-V12 ngo-50,000, abangeniswe ngqo abangu-20, umthamo ophindwe kabili kowe-V11, 85% kuya ku-100%.

Ikholomu yomklomelo iyibhandi lamaphesenti, hhayi isibalo samadola sansuku zonke. Izimali zansuku zonke zesethulo sabagqugquzeli zika-V1 kuya ku-V5 ziwukuhumusha kwabaholi kwala mabhandi ngamazinga angomhla ka-7 Septhemba; amabhandi ayisitatimende esisemthethweni. Ukuhlaziywa kwemodeli yezomnotho kubiza izikhundla kusukela ku-Recruit kuya ku-Spartan King.

Umthombo: Umtapo wezinsiza we-SpartanOS (t.me/SpartanOSLibrary), 17 Juni 2026; Ukuhlaziywa kwemodeli yezomnotho kwe-Spartan OS, isethulo esisemthethweni, 2026, ikhasi 16

Iyini i-TriZone?

Isakhiwo sezikhuthazo sezendlalelo ezintathu esingemuva kwemali engenayo yamazinga. Indawo eyinhloko: umnikelo oqondile, 8%. Indawo yokuxhumanisa: ukusebenzisana komphakathi nokukhula kweqembu, 4%. Indawo yomkhakha: ukwanda okubanzi nokufinyelela kubasebenzisi, 2%. Iphepha elimhlophe liyethula kanye namaphuzu e-AICS njengendlela izikhuthazo ezisuka ngayo ekwabiweni okumile ziye ekuhlolweni okuguquguqukayo.

Umthombo: Iphepha elimhlophe le-Spartan OS, okusemthethweni, 2026, isigaba 5.5; Umtapo wezinsiza we-SpartanOS (t.me/SpartanOSLibrary), 17 Juni 2026

I-O² yehluke kanjani ku-Olympus DAO, iphuzu ngephuzu?

Amaphuzu ayisishiyagalombili avela ethebuleni leprojekthi uqobo: i-liquidity (i-POL kanye nokulungisa okuguquguqukayo uma kuqhathaniswa ne-POL kuphela), isivuno (umkhawulo wemali engenayo nokukhulula okuvumelanisayo uma kuqhathaniswa ne-APY ephezulu ye-rebase), ukulawulwa kwemakethe (isu elisebenzayo uma kuqhathaniswa nokuzilinganisela), ukuzinza (imizwa nedatha uma kuqhathaniswa nokwesekwa okungabophekile), isamba esikhona (ukukhiqiza, ukushisa nokuthenga kabusha uma kuqhathaniswa nokwanda kwe-rebase), ukulawula ubungozi (ukungenelela kwephrothokholi uma kuqhathaniswa nokuziphatha kwabahlanganyeli), ukubusa (i-DAO kanye ne-multisig kanye nokwenziwa ngezendlalelo) nokuguquguquka (amapharamitha aguquguqukayo uma kuqhathaniswa nezindlela ezimisiwe).

Ithebula eliphelele lisesigabeni esithi Ukuqhathanisa. I-Olympus DAO ayizange iyibhale ikholomu yayo. Ikhasi 29 lokuhlaziywa kwemodeli yezomnotho.

Umthombo: Ukuhlaziywa kwemodeli yezomnotho kwe-Spartan OS, isethulo esisemthethweni, 2026, ikhasi 29

Yiziphi izishayeli ezinhlanu eziyinhloko, esithombeni esisemthethweni?

Isizinda sokufinyelela kokuqukethwe (ukusebenzisana okuvame kakhulu, ukuqoqwa kwabasebenzisi), injini yokukhula ye-AI (ukuqonda isidingo, ukuthuthukisa ukusabalalisa), isizinda sama-ejenti e-AI namathokheni (ukuhlelwa kwamasevisi, ukujikeleza kwenani), injini yokubala ye-AI (umkhiqizo wokubala, ukwandiswa okuvumelana nezimo), umkhakha wabathuthukisi (amathuluzi avulekile, ukwandisa izimo zokusebenzisa). Izinhlelo ezinhlanu ezifanayo nalezo zephepha elimhlophe; ezimbili ziyasebenza namuhla.

Umthombo: Umtapo wezinsiza we-SpartanOS (t.me/SpartanOSLibrary), kusukela ngoJuni kuya kuJulayi 2026

Iyini i-Phalanx Community?

Umphakathi okhuluma isiNgisi owakha i-Spartan OS ku-Anubis Chain ngalo mtapo, oqanjwe ngokuhleleka kwempi lapho abangamakhulu amathathu bavimba khona indlela emincane phakathi kwezintaba ngoba ngamunye wayevikela olandelayo. Imithetho emine: isibalo ngasinye nomkhawulo waso nosuku lwaso, azikho izithembiso zenzuzo, izixhumanisi ezivela emakhasini asemthethweni kuphela, futhi imibuzo engaphendulwanga iya kumholi, hhayi ekuqageleni.

Isiteshi ngu-@spartanos_phalanx ku-Telegram (t.me/spartanos_phalanx). Isixhumanisi sokumema sisesigabeni esithi Joyina. Izinsiza zithunyelwa esiteshini kuqala bese zibuyekezwa lapha.

Umthombo: Phalanx Community, Septhemba 2026

Sikuphi isiteshi se-Phalanx?

Ku-Telegram: @spartanos_phalanx (t.me/spartanos_phalanx). Izimemezelo, imihlangano nezinsiza zamanje ziya lapho kuqala; leli khasi lilandela ngenguqulo ngayinye. Isixhumanisi sokubhalisa sisesigabeni esithi Joyina, eduze kwesiteshi.

Umuntu omusha ujoyina isiteshi kuqala futhi abhalise kuphela uma esenqumile. Emlayezweni wokuqala, thumela isiteshi, hhayi isixhumanisi.

Umthombo: Phalanx Community, 24 Septhemba 2026

Yini uhlangothi lwempahla nohlangothi lwesamba samathokheni?

Izingxenye ezimbili zomnotho ngokwesitatimende. Uhlangothi lwempahla: imali engena kuphrothokholi yengeza ezimpahleni zephrothokholi, ku-liquidity, ku-treasury nasekhonweni le-POL. Uhlangothi lwesamba samathokheni: i-RM iyakhiqizwa, iyakhiywa, iyakhululwa, ithengwa kabusha noma ishiswe ngokwemithetho yephrothokholi nomkhiqizo osetshenziswe. Lezi zinhlangothi ezimbili ziyasebenzisana kodwa azifani, ngakho imali efakwayo akuyona imali ehlukaniswayo bese ikhokhwa njengemiklomelo ye-RM.

Lena yindlela yokucabanga ye-treasury namabhondi efana neye-Olympus iphrojekthi ethi ingukhokho wayo: isamba samathokheni sesikhathi esizayo sisetshenziselwa ukuthola izimpahla ne-liquidity iphrothokholi ezidingayo namuhla. Indlela eqotho yokukwethula ukuqamba zombili izinhlangothi ngomoya owodwa, nokwengeza isixwayiso seprojekthi uqobo: ukukhiqiza kukodwa akuxazululi lutho; umbuzo ukuthi ingabe isidingo sangempela siyasimunca yini isamba.

Umthombo: Isitatimende sokuthi imali engena kuphrothokholi iphathwa kanjani, esatholwa ngomhla ka-24 Septhemba 2026, siphinde sashicilelwa esigabeni esithi Okusemthethweni

Kwenzekani emalini kusukela ngesikhathi ingena ku-Spartan OS?

Njengoba iphrojekthi ikuchaza: imali ingena kuphrothokholi; iba yizimpahla zephrothokholi, i-treasury, i-POL noma i-liquidity; i-RM iyakhiqizwa ngokwemithetho yephrothokholi; leyo RM iyakhiywa futhi ikhululwe ngendlela elawulwayo; ihlangabezana nokunikezwa nesidingo semakethe yesibili; i-O^2 iqapha imakethe; izindlela zokuthenga kabusha, zokushisa, zokuvikela nezi-liquidity ziyasabela; uhlelo luya ekulinganeni okusha kokunikezwa nesidingo.

Izinyathelo eziyisishiyagalolunye, futhi akudingeki ukuthi i-RM ifike emakethe evulekile ngaso leso sikhathi. Phakathi kokukhiqiza nemakethe kukhona ukukhiya, ukukhululwa, isidingo se-turbo se-1:1, ukuthenga kabusha nokushisa, kanye ne-O^2. Umgqugquzeli okwazi ukusho lolu chungechunge ngekhanda uphendula iningi lemibuzo yezomnotho ngaphambi kokuba ibuzwe.

Umthombo: Isitatimende sokuthi imali engena kuphrothokholi iphathwa kanjani, esatholwa ngomhla ka-24 Septhemba 2026, siphinde sashicilelwa esigabeni esithi Okusemthethweni

Yiziphi izendlalelo ezintathu zomnotho we-Spartan OS?

Imithetho yephrothokholi, izikhuthazo zenethiwekhi nokulinganisa imakethe. Isendlalelo semithetho yephrothokholi sinquma ukuthi izimpahla zingena kanjani, zikhiywa kanjani, zikhiqizwa kanjani futhi zikhululwa kanjani: izikhathi ze-staking, amabhondi, amashejuli okukhulula neziphindaphindi eziphezulu zemiklomelo, okungashintshwa ngokuzithandela usuku nosuku. I-AICS isendlalelo sezikhuthazo zenethiwekhi futhi ivumelanisa izikhuthazo nempilo yenethiwekhi. I-O² isendlalelo sokulinganisa imakethe futhi ivumelanisa ukuvikela nempilo yemakethe.

Inguqulo yeprojekthi ngomusho owodwa: i-AICS iphatha impilo yenethiwekhi, i-O² iphatha impilo yemakethe. Imithetho yephrothokholi inikeza uhlaka; izikhuthazo ezisebenzayo namapharamitha okuvikela akuwona amanani amisiwe unomphela futhi ayavumelana nezimo ngemijikelezo emibili yempendulo. Sho ukuthi izindlela zakhelwe ukwenza uhlelo luqine; akukho siqinisekiso sokuzinza kwentengo noma kwesivuno; isitatimende ngokwaso sisho kanjalo.

Umthombo: Isitatimende sokuthi imali engena kuphrothokholi iphathwa kanjani, esatholwa ngomhla ka-24 Septhemba 2026, siphinde sashicilelwa esigabeni esithi Okusemthethweni

Kungani i-GD ikhona uma sekukhona i-RM nemali yedijithali ezinzile?

Izimpahla ezintathu, imisebenzi emithathu, njengoba i-Spartan OS isho. Izimali zedijithali ezinzile zibeka intengo, zixazulula izinkokhelo futhi ziletha imali. I-RM iyimpahla esetshenziswa njalo edlula ezikhuthazweni, ku-staking, emabhondini, ku-liquidity, ekunqwabelaneni kwenzalo, ekushisweni nasezinhlelweni zokusebenza. I-GD iyisendlalelo esingavamile sokubusa namalungelo omkhakha esikhathi eside: inani eliphezulu elimisiwe lamathokheni angu-390,000 elingakhuli ngabasebenzisi, nge-TVL noma ngezinhlelo zokusebenza. Iphuzu leprojekthi uqobo ukuthi impahla ejikeleza ngokushesha namalungelo esikhathi eside angavamile kakhulu akufanele kube yithokheni elilodwa.

Impendulo iyakuvuma lokho ongabazayo azokusho kuqala: ithokheni lokubusa elijwayelekile lingakhiwa ngendlela efanayo, ngakho igama alifakazeli lutho. Umehluko we-GD kufanele uzuzwe ngokunamathisela amalungelo okubusa angempela, ukusebenziseka ezinhlelweni zokusebenza nokubamba iqhaza emkhakheni ku-390,000 omisiwe. Lapho i-GD ivela khona: amalungelo abanikazi be-NFT bokuqala, izabelo zokubusa nezomkhakha ezinqunywe ngaphambili, amalungelo e-GD ahlobene nesikhwama sokuzinza se-RM, nemakethe yesibili. I-GD yesikhwama sokuzinza ikhululwa ngokulinganayo emasontweni angu-30 esabelweni sokuqala (isabelo se-25% sezikhuthazo ze-liquidity), ayikhiqizwa kabusha; isakhiwo sokuqala siphinde sibe nesigodlo sobungozi se-treasury yephrothokholi esingu-5%.

Umthombo: Impendulo emibuzweni eyisikhombisa yokuhlolisisa, eyatholwa ngomhla ka-24 Septhemba 2026, iphinde yashicilelwa esigabeni esithi Ukuhlolisisa

Yini edala isidingo se-GD ngaphezu kokungavami kwayo?

Ukusetshenziswa, ngamazwi eprojekthi uqobo: ukungavami kukodwa akudali sidingo. Isakhiwo esihlosiwe yisamba esimisiwe, ukutholakala okulinganiselwe, isidingo sokubusa, ukusebenziseka ezinhlelweni zokusebenza nokwanda komkhakha kanyekanye. I-TempleRaid iwuhlelo lokusebenza lokuqala olungenisa i-GD ekusetshenzisweni; eminye imidlalo, izinhlelo ze-DeFi, RWA, DID ne-NFT kanye nengqalasizinda yokuhweba kuhloswe ukuthi kwengeze ukubamba iqhaza ekubuseni, amalungelo ezinhlelo zokusebenza nezimvume kumathokheni afanayo angu-390,000.

I-Spartan OS iqamba izilinganiso ezingakufakazela, futhi intengo ayiphakathi kwazo: amakheli e-GD asebenzayo, ukusabalala kobunikazi, ukubamba iqhaza ekubuseni, inani lezinhlelo zokusebenza ezisebenzisa i-GD, ukusebenzisana ezinhlelweni zokusebenza nokusetshenziswa kwe-on-chain. Isivivinyo sayo uqobo sisika nhlangothi zombili: uma umkhakha ukhula kodwa ukusetshenziswa kwe-GD kungakhuli, isidingo sesakhiwo asikakhonjiswa. Sho lowo musho kongabazayo ngaphambi kokuba akusho kuwe.

Umthombo: Impendulo emibuzweni eyisikhombisa yokuhlolisisa, eyatholwa ngomhla ka-24 Septhemba 2026, iphinde yashicilelwa esigabeni esithi Ukuhlolisisa

Iyini indaba 'yokululama okumise okuka-U', futhi kungani iphrojekthi iyixoxa kuqala?

Umlayezo i-Spartan OS manje ewuthumela kuwo wonke umlingani omusha wamazwe ngamazwe ngaphambi kokukhuluma ngezindlela noma ngamazinga. I-Anubis Chain yethulwa ngomhla ka-8 Ephreli 2026, i-Spartan OS yavulelwa imakethe ngomhla ka-16 Juni, futhi isisekelo semali sisonke sadlula u-35 wezigidi USDT ngemuva komjikelezo owodwa ophelele: ukukhula okusheshayo, ukwehla kwemakethe, isikhathi lapho ukuzethemba kwavivinywa khona, bese kuba ukululama iphrojekthi ekubiza ngokuthi kumise okuka-U. Inhloso yokuyixoxa kuqala: imiphakathi yokuqala yafunda ukuziphatha kwayo kulowo mjikelezo, futhi iphrojekthi ifuna ukuthi imakethe yamazwe ngamazwe izuze lesi sifundo kunokuphinda ukuwa.

Yifunde yonke kanye, bese uthumela isixhumanisi sesigaba kunomugqa owodwa wayo. Inemingcele yayo uqobo: u-35 wezigidi yisamba esishiwoyo, izinyathelo ezibalulekile ezilandelayo ziyizinhloso zokuthuthukisa, futhi intengo inqunywa ukunikezwa nesidingo. Umgqugquzeli ocaphuna ukululama ngaphandle kokwehla okwandulela uxoxa indaba ehlukile kweyeprojekthi.

Umthombo: Harry (Spartan OS), 'Kusukela ekululameni okumise okuka-U kuya emkhakheni womhlaba wonke', okwadluliselwa esiteshini se-Phalanx ngomhla ka-26 Septhemba 2026, kwaphinde kwashicilelwa kuphelele esigabeni esithi Okusemthethweni

Kusho ukuthini ngokwenza 'uma izintengo zikhuphuka, ukuziphatha; uma izintengo zehla, ukwakha'?

Isifinyezo seprojekthi uqobo salokho imiphakathi yayo yokuqala ekufundile. Lapho intengo ikhuphuka, ukuthengisa okugxilile, okukhulu nokungahlelekile kungalimaza i-liquidity nemizwa yemakethe ngisho noma iphrothokholi isaphilile, ngakho imiphakathi ikhuthaza ukuhweba okunengqondo, okusabalele nokuhlelekile. Lapho intengo yehla, baqhubeka nokwakha: ukuthuthukiswa komphakathi, imfundo yemakethe, imicimbi, abahlanganyeli abasha. Imigqa eyisithupha iphrojekthi ecela yonke imakethe ukuthi iyibambe: hlala unengqondo uma imakethe ikhuphuka; ungethuki uma yehla ilungisa; hlonipha ukuzikhethela komuntu futhi uhloniphe imakethe ehlanganyelwe; buka intengo, buka i-liquidity kakhulu; buka inzuzo, buka nomkhakha; cabanga nganamuhla, wakhele ikusasa.

Lezi yimikhuba, ngamazwi eprojekthi, hhayi imithetho esesivumelwaneni. Zisho njengesiko, ungalokothi uzisho njengombandela wobulungu. Umusho owodwa okufanele uwugcine: emakethe ye-liquidity ehlanganyelwe, izenzo zomuntu ngamunye zingathinta umkhakha obanzi.

Umthombo: Harry (Spartan OS), 'Kusukela ekululameni okumise okuka-U kuya emkhakheni womhlaba wonke', okwadluliselwa esiteshini se-Phalanx ngomhla ka-26 Septhemba 2026, kwaphinde kwashicilelwa kuphelele esigabeni esithi Okusemthethweni

Ngokwephrojekthi, i-Spartan OS ingekabani?

Ingeyawo wonke umuntu onikela ekwakheni umkhakha: hhayi eyaseShayina, hhayi eyaseNdiya, hhayi eyaseDubai, hhayi eyomphakathi owodwa. Iphrojekthi ichaza isigaba esilandelayo njengomhlaba owakha ndawonye kunemakethe eyodwa ehola enye, lapho izimakethe zaseShayina, eNdiya, eMpumalanga Ephakathi naseNingizimu-mpumalanga ye-Asia ziba yizingxenye ezixhumene zemakethe eyodwa njengoba ubukhulu bukhula.

Kuyasiza uma ilungu libuza ukuthi imakethe yamazwe ngamazwe ingeyesibili kweyaseShayina yini. Impendulo yeprojekthi uqobo ukuthi imiphakathi yokuqala yakha isisekelo futhi manje idlulisela okuhlangenwe nakho kwayo; ifomula evala ngayo ithi i-O² kanye ne-AICS kanye nokuthuthukiswa komkhakha kanye nokubusa komphakathi kanye nokuvumelana komhlaba wonke.

Umthombo: Harry (Spartan OS), 'Kusukela ekululameni okumise okuka-U kuya emkhakheni womhlaba wonke', okwadluliselwa esiteshini se-Phalanx ngomhla ka-26 Septhemba 2026, kwaphinde kwashicilelwa kuphelele esigabeni esithi Okusemthethweni

Imali engenayo

I-staking, amabhondi, i-turbine. Izinga ngalinye nomkhawulo walo nosuku lwalo.

Umuntu uzuza kanjani ku-Spartan OS?

Imithombo emihlanu, yonke ikhokhwa njalo emahoreni angu-12, emine yayo ivulekile kusukela ku-$1. I-staking eguquguqukayo ngo-0.3% emahoreni angu-12. I-staking yesikhathi eside ngo-1.1% kuya ku-1.3% ngosuku izinsuku ezingu-180, 360 noma 540. Ibhondi lokushisa ngo-1.5% ngosuku okusele, kusukela ku-$500. Imali engenayo yamazinga engu-8%, 4% no-2% we-ROI emazingeni amathathu. Imiklomelo yezikhundla V1 kuya ku-V12, ekhokhwa nsuku zonke isuka ku-pool ye-DAO.

Amazinga njengoba kushiwo yi-Spartan OS ngomhla ka-7 no-14 Septhemba 2026. Amazinga ayashintsha. Yonke iphozishini yesikhathi eside inomkhawulo omiswa nge-USDT lapho ungena. Yonke i-RM ezuziwe idlula ku-turbine ngaphambi kokuba ifike esikhwameni. Akusona isithembiso senzuzo.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 6

I-staking eguquguqukayo isebenza kanjani?

Kusukela ku-$1, akukho kukhiya. 0.3% njalo emahoreni angu-12 ku-RM yakho, cishe u-0.6% ngosuku, inzalo inqwabelana ngokwayo uma ishiywa ingaphakathi. Cishe u-20% ngenyanga uma ingathintwa. Imali eyinhloko ingakhishwa noma nini. Akukho mkhawulo.

Ku-$1,000: cishe u-$6 ngosuku, cishe u-$180 ngenyanga, cishe u-$200 ngokunqwabelana kwenzalo. Lezi yizibalo ze-RM; umphumela wamadola uncike entengweni ye-RM ngosuku lokuthengisa. Isifinyezo esishicilelwe sibhala izinga njengebhandi elingu-0.22% kuya ku-0.93%; izinga elibukhoma ngomhla ka-7 Septhemba lalingu-0.3% emahoreni angu-12, liyashintsha.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 7; Idokhumenti yomholi, Septhemba 2026, Ingxenye II

I-staking yesikhathi eside isebenza kanjani?

Kusukela ku-$1, izinsuku ezingu-180, 360 noma 540. Izinga lansuku zonke njengoba kushiwo: 1.1%, 1.2%, 1.3%. Umkhawulo wenkokhelo yonke: 4×, 4.5×, 5× wenani lokungena nge-USDT, omiswa ngesikhathi ungena. Iphozishini iqhubeka ikhokha ize ifike kulowo mkhawulo, noma ngabe yisiphi isikhathi (kuhlolwe ngomhla ka-25 Septhemba 2026); imali eyinhloko ikhululwa ngezingxenye zansuku zonke phakathi nesikhathi kanye nenzalo nemiklomelo eyengeziwe, futhi konke kubalwa ngaphakathi komkhawulo: imali eyinhloko ayikhokhwa ngaphezulu uma umkhawulo usuphelile (kuhlolwe ngomhla ka-26 Septhemba 2026).

Ku-$1,000: $11, $12 noma $13 ngosuku; cishe u-$330, $360 noma $390 ngenyanga ngamazinga ashiwo. I-oda lesikhathi eside libonisa izingxenye ezintathu: imali eyinhloko, inzalo nemiklomelo eyengeziwe, konke kungenziwa uku-claim nsuku zonke. Inzalo iyanqwabelana njalo emahoreni angu-12 uma ishiywa ingaphakathi; imiklomelo eyengeziwe ayinqwabelani, ngakho yenze uku-claim nsuku zonke. Ngomhla ka-14 Septhemba amazinga acashunwa njengangaphezu kuka-1.0%, 1.1% no-1.2%.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, amaslayidi 7 no-8; Idokhumenti yomholi, Septhemba 2026, Ingxenye II

Umkhawulo usho ukuthini?

Okuningi kakhulu iphozishini engakukhokha, yonke imithombo ihlanganisiwe, okumiswa nge-USDT ngesikhathi ungena. U-$1,000 ofakwe izinsuku ezingu-540 ungakhokha okungeqile ku-$5,000 wenani le-RM. Bese iphozishini iyaphela bese uvula entsha. I-staking eguquguqukayo ayinamkhawulo.

Qala ngomkhawulo. Izinga elingenalo uphahla liyindaba; izinga elinophahla liyisivumelwano. Kuhlolwe ngomhla ka-25 Septhemba 2026: iphozishini iqhubeka ikhokha ize ifike emkhawulweni, noma ngabe yisiphi isikhathi sayo. Ngamazinga ashiwo, amaphozishini ezinsuku ezingu-360 no-540 afika ophahleni lwawo cishe ezinyangeni eziyishumi, ngaphambi kokuba isikhathi siphele, kanti ibhondi lokushisa cishe ezinyangeni ezintathu. Kuhlolwe ngomhla ka-26 Septhemba 2026: imali eyinhloko ingaphakathi komkhawulo. Imali eyinhloko nenzuzo kukhululwa ndawonye futhi kokubili kubalelwa ku-4×, 4.5× noma 5×; imali eyinhloko akuyona inkokhelo eyengeziwe ngaphezulu. Isibali sisebenzisa lokho kuchaza kuphela. Idokhumenti yomholi ibeka imikhawulo njengo-400%, 450% no-500%.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 7; Idokhumenti yomholi, Septhemba 2026, Ingxenye I

U-$1,000 ukhokha malini ngosuku?

Ngamazinga ashiwo, ngaphambi kwanoma iyiphi imali engenayo yeqembu: $6 eguquguqukayo, $11 ezinsukwini ezingu-180, $12 ezinsukwini ezingu-360, $13 ezinsukwini ezingu-540, $15 ebhondini lokushisa. Ku-$10,000: $60, $110, $120, $130 noma $150 ngosuku.

Izinga elilula lansuku zonke njengoba kushiwo ngomhla ka-7 Septhemba 2026, ukunqwabelana kwenzalo akufakiwe. Amazinga ayashintsha; imikhawulo imiswa nge-USDT lapho ungena. Akusona isithembiso senzuzo. Sho yonke imiphumela nge-RM bese uvumela olalele ukuthi aguqule.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 8

Liyini ibhondi le-liquidity? Liyafana yini ne-staking?

Cha. Amabhondi athengwa kudeshibhodi efanayo kodwa angumkhiqizo ozimele. Ibhondi le-liquidity lithengisa i-RM ngesaphulelo kunemakethe (cishe u-2% kuya ku-5% ezinsukwini ezingu-180, 4% kuya ku-10% ezingu-360, 6% kuya ku-16% ezingu-540 ngezinsuku ezishiwo), likhokha njenge-staking ehambisana nalo, ngaphansi komkhawulo ofanayo, ngaphandle kwemiklomelo eyengeziwe. Kusukela ku-$1.

Isibonelo esibaliwe esivela emhlanganweni: u-$1,000 ofakwa ebhondini lezinsuku ezingu-540 ngesaphulelo esingu-15% uthenga i-RM eyinani lika-$1,150; ngo-$30.46 nge-RM ngayinye intengo yokungena ingu-$26.21. I-staking ikhulula i-RM ngokushesha futhi yengeze imiklomelo eyengeziwe; ibhondi lithenga i-RM eningi ngaphansi kophahla olufanayo. Buza ukuthi umuntu ufuna ukuphatha yiphi. Izaphulelo ziyashintsha nemakethe, futhi iphrojekthi yakusho lokho ngamazwi acacile ngomhla ka-25 Septhemba 2026, usuku eyatshela ngalo neqembu lamazwe ngamazwe ukuthi liqale ngebhondi kulesi sigaba; imali eyinhloko yebhondi nemiklomelo kukhululwa nsuku zonke. Bheka amakhadi amabhondi nesigaba esithi Okusemthethweni.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 9; Idokhumenti yomholi, Septhemba 2026, Ingxenye II

Liyini ibhondi lokushisa?

Kusukela ku-$500, akukho nani eliphezulu. Likhulula u-250% we-oda, okungu-150% okusele, ngo-1.5% ngosuku okusele ngaphandle kokunqwabelana kwenzalo, umkhawulo ungu-2.5×. Lengeza ukushajwa kwamandla okungu-20% ne-airdrop ye-GD engu-3%. Yindlela abaholi abathenga ngayo amandla emali engenayo yamazinga, futhi ingenye yezindlela ezimbili kuphela zokuthola i-GD.

Isibalo sansuku zonke esiphezulu kakhulu, uphahla oluphansi kakhulu, nokuwukuphela komnyango oya ku-GD ngaphandle kwemakethe evulekile. Ngezinga elishiwo lifika emkhawulweni walo cishe ezinyangeni ezintathu.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, amaslayidi 8 no-9; Idokhumenti yomholi, Septhemba 2026, Ingxenye II

Yini i-turbine?

Lapho yonke i-RM oyizuzayo yenziwa khona uku-claim, ivela ku-staking, emabhondini, emiklomelweni yezikhundla nasemalini engenayo yamazinga ngokufanayo. Uthenga inani elifanayo le-RM ku-DEX, ngesilinganiso esingu-1:1, ulinde amahora angu-24, bese womabili amanani aba ngawakho. Yonke inkokhelo futhi iwukuthenga.

Leyo yincazelo yenkundla yokuthi kungani i-RM ihlale ngaphezu kuka-$30 kusukela yethulwa ngesikhathi ikhokha inzuzo yansuku zonke: inzuzo ngokwayo iyingcindezi yokuthenga. Kusho ngomoya owodwa: konke okuzuzayo kudlula ku-turbine, thenga inani elifanayo, ulinde amahora angu-24, bese kuba ngokwakho. Imali engenayo yamazinga kuphela edinga amandla ngaphezulu.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 11; Idokhumenti yomholi, Septhemba 2026, Ingxenye III

Iyini imiklomelo eyengeziwe?

Ingxenye yesithathu emaphozishini esikhathi eside kuphela, exhaswa ngu-35% wentela eyengeziwe yokuthengisa futhi engenziwa uku-claim njalo emahoreni angu-12. Ayinqwabelani, ngakho yenze uku-claim nsuku zonke. Noma ubani onama-$200 noma ngaphezulu ephozishinini yezinsuku ezingu-360 noma 540 uyahlanganyela kuyo.

Uma abanye bethuka bathengise ngesikhathi intengo yehla, intela eyengeziwe abayikhokhayo iyahlukaniswa: 65% iyashiswa, 35% iya kule pool. Abanikazi bakhokhelwa ukwehla kwentengo.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, amaslayidi 7 no-11

Yiziphi izigaba ze-genesis?

Izigaba ezintathu zezinsuku eziyisithupha njengoba kushicilelwe: isigaba sokuqala ngo-$4 nesiphindaphindi esingu-5.0×, i-airdrop ye-GD engu-8% nenkokhelo engu-1%; isigaba sesibili ngo-$3, 4.5×, 5%, 0.8%; isigaba sesithathu ngo-$2, 4.0×, 3%, 0.5%. Amakholomu ngaweprojekthi; ukuthi ngalinye lisetshenziswa kanjani akukachazwa ngokugcwele.

Lena yingxenye yemodeli okungenzeka kakhulu ukuthi ishintshe. Ngaphambi kokwethula noma yini kuyo, hlola isimemezelo samanje ku-x.com/Spartan_Arena_. Uma izibalo zihluka, ikhasi ledokhumenti yomholi selithathelwe indawo.

Umthombo: Idokhumenti yomholi, Septhemba 2026, Ingxenye VI

Yimaphi amazinga, izintengo nemikhawulo yanamuhla?

Njengoba kuboniswa ku-spartanar.org ngomhla ka-24 Septhemba 2026: RM $30.81. Eguquguqukayo 0.2962% nge-rebase ngayinye, ama-rebase amabili ngosuku, akukho mkhawulo. Imikhawulo yesikhathi eside 4×, 4.5× no-5×. Amabhondi 1.29%, 11.46% no-16.61% ngaphansi kwentengo ye-RM ezinsukwini ezingu-180, 360 no-540. Isikhwama sokuzinza: kusukela ku-500 USDT, umkhawulo wokukhulula 250%, i-GD ikhululwa kancane kancane emasontweni angu-30. Amandla 260% ku-staking yezinsuku ezingu-360, 557% ekushiseni i-RM. Izinkokhelo 5% eziyisisekelo, 1% zokuvikela. Isilinganiso esengeziwe se-turbine 1%.

Ideshibhodi yabonisa inani lemakethe elingu-$226.45 wezigidi, isamba esikhona se-RM 7,350,151, i-treasury $61.5 wezigidi (inani elingenabungozi $10.93 wezigidi), 69.67% ye-RM ifakwe ku-staking, inani eliphelele elikhiyiwe $157.5 wezigidi, i-pool eguquguqukayo $57.05 wezigidi, ibhalansi ye-LP bond $106.6 wezigidi, isikhwama sokuthenga kabusha 2,083,658 USDT. Amazinga ayashintsha; hlola i-dApp ngaphambi kokucaphuna, futhi usebenzise isigaba esithi Imigomo yanamuhla ukuze uthole uhlu oluphelele.

Umthombo: spartanar.org, kufundwe ngomhla ka-24 Septhemba 2026

Ngibala kanjani ukuthi imali ethile ikhokha malini, noma ukuthi iqembu lifanelekela siphi isikhundla?

Sebenzisa izibali ezimbili kuleli khasi. Esokuqala sithatha imali, umkhiqizo, izinga (eligcwaliswe kusengaphambili njengoba kushiwo), intengo nesikhathi esibekiwe, bese sibonisa usuku lokuqala, izinsuku ezingu-30, isikhathi esibekiwe, umkhawulo nosuku owufinyelelwa ngalo, nge-RM nange-USDT, kanye nayo yonke imikhiqizo eceleni ngeceleni. Esesibili sithatha iphozishini yakho nemilenze yakho, sithole isikhundla, bese sibonisa umklomelo we-DAO endaweni encane, imali engenayo yamazinga, amandla nemigqa yamabhonasi, nomthamo ofanayo uphinde wahlukaniswa waba yimilenze emibili kuya kweyisithupha.

Zombili ziphawula konke okucatshangelwayo. Imigqa emithathu yamabhonasi ilandela imithetho ehloliwe (umehluko ebangeni phakathi kwamabhandi; isikhundla esifanayo nokweqa ku-10% kuya ku-15% wenzuzo yephozishini enjalo eseduze kakhulu) ezisekelweni ezilinganiselwe, futhi umugqa ngamunye usho ukuthi iyiphi ingxenye eyisilinganiso. Okuthi 'Kopisha isifinyezo' kukunikeza umbhalo ongawunamathisela kumuntu okhuluma naye, kufakwe umkhawulo nosuku.

Umthombo: Leli khasi, 24 Septhemba 2026

Yisiphi isabelo sayo yonke imali efakwayo esiya kunethiwekhi?

Asikho isabelo esinjalo. I-Spartan OS ithi ayiyona imodeli yokwaba imali lapho u-$100 ngamunye ehlukaniswa abe yizingxenye ezimisiwe zenethiwekhi, umphakathi nemiklomelo. Imali engena kuphrothokholi iya ohlangothini lwempahla (i-liquidity, i-treasury, i-liquidity ephethwe yiphrothokholi, kuya ngomkhiqizo); ngokwehlukile, iphrothokholi ikhiqiza i-RM ngokuyisekela ngokwemithetho yayo, iyikhiye, iyikhulule ngendlela elawulwayo, futhi i-O^2 ilinganisa lokho kunikezwa nesidingo. Impendulo yamaphesenti ingachaza imodeli iphrojekthi ethi ayiyiqhubi.

Uma othile ebuza iphesenti, nikeza izinhlangothi zombili: yiziphi izimpahla zephrothokholi ezidalwa ngu-$100, nokuthi yisiphi isamba se-RM sesikhathi esizayo esidalwa ngokuwusekela nokuthi sifika kanjani emakethe. Umbuzo wokuhlolisisa wesitatimende uqobo yiwona okufanele uwunikeze ongabazayo: kuyunithi ngayinye yemali, yiziphi izimpahla ezidalwayo noma ezitholwayo, yisiphi isamba se-RM noma isikweletu sesikhathi esizayo esiveliswayo, sikhululwa kanjani, futhi yini esilinganisa nesidingo sangempela ne-liquidity. Bese ukhomba idatha eyiphendulayo: ukukhishwa kwe-RM okusele, imithamo yokuthenga kabusha neyokushisa, i-POL nokujula kwe-liquidity, ukugcinwa kwabahlanganyeli, ukuziphatha ngaphansi kwengcindezi.

Umthombo: Isitatimende sokuthi imali engena kuphrothokholi iphathwa kanjani, esatholwa ngomhla ka-24 Septhemba 2026, siphinde sashicilelwa esigabeni esithi Okusemthethweni

Kungani i-turbine ikhona, ngamazwi eprojekthi uqobo?

Ukudala isidingo eceleni kokunikezwa. Ngaphansi kwenjini ye-Turbo ye-1:1, ukubamba iqhaza kudala ukuthengwa okuphoqelekile kwe-RM kwenani elifanayo, nesikhathi sokulinda. Inhloso yesitatimende icacile: uhlelo aluklanyelwe ukudala ukukhishwa kwamathokheni kuphela; luzama ukudala isidingo semakethe esihambisanayo se-RM ngesikhathi imiklomelo nokunikezwa kudalwa futhi kukhululwa.

Hlanganisa lokhu nekhadi le-turbine ukuze uthole indlela esebenza ngayo (uku-claim, ukuthenga i-RM efanayo, amahora angu-24). Iphuzu lezomnotho ukuthi konke ukukhishwa kufika nesidingo sokuthenga esilinganayo, okuyimpendulo yeprojekthi embuzweni wonke imodeli yokukhiqiza okufanele ibhekane nawo: ubani othenga isamba esisha.

Umthombo: Isitatimende sokuthi imali engena kuphrothokholi iphathwa kanjani, esatholwa ngomhla ka-24 Septhemba 2026, siphinde sashicilelwa esigabeni esithi Okusemthethweni

Ingabe imali yami eyinhloko ibalwa ngaphakathi komkhawulo?

Yebo. Imali eyinhloko yokuqala yephozishini ye-staking noma yebhondi ifakiwe ngaphakathi komkhawulo wokukhulula ophelele ongu-4×, 4.5× noma 5×. Indlela ikhulula imali eyinhloko nenzuzo ndawonye ngokuhamba kwesikhathi, futhi imali eyinhloko ayibuyiselwa ngokwehlukile ngaphezulu uma umkhawulo usuphelile. Ephozishinini engu-5×, kokubili imali eyinhloko nenzuzo ekhululwa yiphrothokholi kubalwa ngaphakathi kwaleso samba esingu-5×. Kuhlolwe ngomhla ka-26 Septhemba 2026.

Kusho njengoba iphrojekthi isho: imali eyinhloko nenzuzo kukhululwa ndawonye, kokubili ngaphakathi komkhawulo, futhi imali eyinhloko akuyona inkokhelo eyengeziwe ngaphezulu. Ngakho u-$1,000 wezinsuku ezingu-540 ungakhokha u-$5,000 wenani le-RM sekukonke, lapho u-$1,000 kuyimali yakho eyinhloko ebuyayo. Ngamazinga ashiwo, amaphozishini ezinsuku ezingu-360 no-540 afika emkhawulweni wawo ngaphambi kokuba isikhathi siphele; impendulo yeprojekthi ithi akukho okukhokhwayo ngemuva komkhawulo, ngakho kufunde njengoba kunjalo futhi ubuze ngaphambi kokuthembisa okuhlukile. Isibali manje sisebenzisa lokhu kuchaza kuphela.

Umthombo: Izimpendulo zemibuzo emine yokulandelela, ezatholwa ngomhla ka-26 Septhemba 2026, zaphinde zashicilelwa esigabeni esithi Ukuhlolisisa

Ilungu elisha lamazwe ngamazwe kufanele liqale nge-staking evamile noma ngebhondi?

Impendulo yeprojekthi ngomhla ka-25 Septhemba 2026: ibhondi, kulesi sigaba. Lapho ebuzwa ukuthi ibhondi linikezani ngaphezu kwe-staking evamile, impendulo ka-Harry yaba ukuthi ibhondi linesaphulelo kanti i-staking izuza inani elikhulu lezinhlamvu zemali. Umyalelo odluliselwe eqenjini lamazwe ngamazwe ngalo lelo hora: tshela imakethe yamazwe ngamazwe ukuthi ithenge ibhondi kulesi sigaba esikhundleni se-staking evamile.

Kudlulisele njengesiqondiso seprojekthi, sinosuku, ungalokothi ukusho njengesincomo sakho senzuzo. Izizathu zisekhadini lokuqhathanisa: i-USDT efanayo ithenga i-RM eningi ngebhondi, futhi imali eyinhloko nemiklomelo kukhululwa nsuku zonke. Isaphulelo siyashintsha, ngakho vula ikhasi lebhondi ngaphambi kokusicaphuna. Ukulandelana okubekwe yi-Phalanx ngomhla ka-3 Okthoba 2026: ibhondi kuqala; i-staking ngemuva kokuba umuntu esengene ohlelweni futhi enayo i-RM ayithenge kumholi wakhe.

Umthombo: Iqembu lamazwe ngamazwe le-Spartan OS, iqembu lomsebenzi, 25 Septhemba 2026, kwaphinde kwashicilelwa esigabeni esithi Okusemthethweni

U-1,000 USDT wathengani ngomhla ka-25 Septhemba, emakethe uma kuqhathaniswa namabhondi?

Ngentengo yemakethe ka-$30.8081, cishe u-32.459 RM. Ngebhondi le-LP lezinsuku ezingu-360 ngo-$27.5301 (10.64% ngaphansi kwemakethe), cishe u-36.324 RM, okwengeziwe okungu-3.865. Ngebhondi le-LP lezinsuku ezingu-540 ngo-$26.2535 (14.79% ngaphansi kwemakethe), cishe u-38.090 RM, okwengeziwe okungu-5.631. Zonke izibalo njengoba zithunyelwe yiphrojekthi ngomhla ka-25 Septhemba 2026.

Lezi zibalo ziyisithombe sosuku olulodwa; ikhadi lokuqhathanisa esigabeni esithi Okusemthethweni linazo kanye nosuku, futhi isibali semikhiqizo sithatha isaphulelo sanamuhla ekhasini lebhondi. I-RM eyengeziwe iyisiqalo esingcono ekungeneni; lokho iphozishini ekukhokhayo ngemuva kwalokho kuyizinga nomkhawulo ofanayo ne-staking yesikhathi eside ehambisana nayo.

Umthombo: Iqembu lamazwe ngamazwe le-Spartan OS, iqembu lomsebenzi, 25 Septhemba 2026, kwaphinde kwashicilelwa esigabeni esithi Okusemthethweni

Ibhondi likhokha kuphela uma selivuthiwe, noma nsuku zonke?

Nsuku zonke. Kokubili kumabhondi e-LP ezinsuku ezingu-360 nezingu-540, imali eyinhloko nemiklomelo kukhululwa nsuku zonke phakathi nesikhathi sebhondi; akukho ukulinda kuze kube sekuvuthweni ukuze uthole imali eyinhloko. Kuhlolwe yiphrojekthi ngomhla ka-25 Septhemba 2026.

Kuyahambisana nomthetho wangomhla ka-26 Septhemba othi imali eyinhloko ingaphakathi komkhawulo: imali eyinhloko nenzuzo kukhululwa ndawonye futhi kokubili kubalwa ngaphakathi komkhawulo ongu-4×, 4.5× noma 5×. Yisho 'kukhululwa nsuku zonke, ngaphakathi komkhawulo' bese izimpendulo zombili ziyavumelana.

Umthombo: Iqembu lamazwe ngamazwe le-Spartan OS, iqembu lomsebenzi, 25 Septhemba 2026, kwaphinde kwashicilelwa esigabeni esithi Okusemthethweni

Isaphulelo sebhondi simisiwe yini?

Cha. 'Isaphulelo asimisiwe. Iphrothokholi izolungiswa ngokwezimo zangempela.' Ngomhla ka-24 Septhemba ikhasi lebhondi labonisa u-1.29%, 11.46% no-16.61% ngaphansi kwemakethe ezinsukwini ezingu-180, 360 no-540; ngomhla ka-25 Septhemba iphrojekthi yacaphuna u-10.64% no-14.79% ezingu-360 no-540. Funda isaphulelo ekhasini lebhondi ngalolo suku.

Ungalokothi ubhale isaphulelo ngaphandle kosuku lwaso. Inkambu yebhondi esibalini ithi 'njengoba kuboniswa ekhasini lebhondi' ngalesi sizathu.

Umthombo: Iqembu lamazwe ngamazwe le-Spartan OS, iqembu lomsebenzi, 25 Septhemba 2026, kwaphinde kwashicilelwa esigabeni esithi Okusemthethweni

Iqembu nezikhundla

Imali engenayo yamazinga, amandla, izitebhisi zika-V1 kuya ku-V12, amaphuzu e-AICS.

Imali engenayo yamazinga isebenza kanjani?

8% we-ROI ezuzwe ngabantu obangenise ngqo, 4% ezingeni lesibili, 2% kwelesithathu, ikhokhwa njalo emahoreni angu-12. Iwukuphela komthombo odinga amandla ukuze uwukhiphe, futhi idlula ku-turbine njengakho konke okunye.

Isibonelo esibaliwe sesikhathi esisodwa: izinga lokuqala, abantu abathathu abakhiqiza u-20 RM umuntu ngamunye: 60 × 8% = 4.8 RM. Izinga lesibili, abantu abayisithupha ku-15 RM: 90 × 4% = 3.6 RM. Izinga lesithathu, abayishumi ku-10 RM: 100 × 2% = 2 RM. Isamba 10.4 RM, esidinga amayunithi angu-10.4 wamandla ukuze kukhishwe.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 10; Idokhumenti yomholi, Septhemba 2026, Ingxenye IV

Ayini amandla, futhi ngiwathola kanjani?

Iyunithi edingekayo ukuze ukhiphe imali engenayo yamazinga: iyunithi eyodwa nge-RM ngayinye ekhishwayo. Ayidingeki ku-staking yakho siqu, emabhondini noma emiklomelweni yezikhundla. Izindlela ezimbili ezihlukene zokuyithola, ngeziphindaphindi i-dApp ezibonisayo ngalolo suku: yenza uku-stake kwe-RM izinsuku ezingu-360 (260% wephozishini ngomhla ka-26 Septhemba 2026) noma ushise i-RM (557% wenani elishisiwe, ngakho cishe u-0.18 RM oshisiwe umboza u-1 RM wemali engenayo yamazinga). Zombili iziphindaphindi zingamapharamitha ephrothokholi aguququkayo; i-dApp iyona okokubhekisela kokugcina (kuhlolwe ngomhla ka-26 Septhemba 2026).

Ukukhipha u-$1,000 wemali engenayo yamazinga kudinga amayunithi angu-1,000: ku-557%, shisa i-RM eyinani elicishe libe ngu-$180; ku-260%, phatha cishe u-$385 we-RM ku-staking yezinsuku ezingu-360. Ibhondi lokushisa lengeza ukushajwa kwamandla okungu-20%. I-150% ne-200% ekuhlaziyweni kwemodeli yezomnotho nebanga lokuphindwa ka-2 kuya ku-6 ezimpendulweni zokuhlolisisa zangomhla ka-24 Septhemba sekuthathelwe indawo yizibalo ze-dApp ezibukhoma, ngomyalelo weprojekthi uqobo wangomhla ka-26 Septhemba 2026. Vula ikhasi lamandla ngaphambi kokucaphuna isiphindaphindi, futhi usho usuku.

Umthombo: Idokhumenti yomholi, Septhemba 2026, Ingxenye III

Izikhundla V1 kuya ku-V12 zisebenza kanjani?

Imilenze emibili, hhayi emithathu. Umlenze omkhulu unikeza isikhundla, omncane uyakhokha umklomelo. I-V1 idinga u-$500 ofakwe ku-staking, abangeniswe ngqo abathathu abafanelekayo ($100 noma ngaphezulu ngamunye) no-$10,000 emlenzeni ngamunye kwemibili, futhi ikhokha cishe u-$15 kuya ku-$25 ngosuku kusuka ku-pool ye-DAO. V2: $1,500, abangeniswe ngqo abane, $50,000 umlenze ngamunye, cishe u-$80 kuya ku-$180 ngosuku. V3: $3,000, abahlanu, $150,000, cishe u-$150 kuya ku-$300.

V4: $5,000, abangeniswe ngqo abayisithupha, $300,000 umlenze ngamunye, $300 kuya ku-$500 ngosuku. V5: $7,000, abayisishiyagalombili, $600,000, $800 kuya ku-$1,200. Izibalo zika-V6 kuya ku-V12 zingokokubhekisela kuphela, zibekwa nsuku zonke yizinga lomklomelo webhulokhi namaphuzu e-AICS: akumisiwe, akuqinisekisiwe. I-Origin yayidinga amaqembu amathathu; i-Spartan OS idinga amabili. Umlenze omkhulu uyindawo enkulu; yonke eminye imilenze ndawonye iyindawo encane, futhi umklomelo ukhokhwa kuyo (kuhlolwe ngomhla ka-24 Septhemba 2026). I-V10 kuya ku-V12 zidinga imilenze emibili ngayinye ephethe isikhundla esingezansi. Umehluko phakathi kwezikhundla uhloliwe njengomehluko wamaphesenti phakathi kwamabhandi amabili, okhokhelwa isikhundla esiphezulu. Ibhonasi yesikhundla esifanayo ingu-10% kuya ku-15% wenzuzo efanelekile yephozishini yesikhundla esifanayo eseduze kakhulu ngaphansi kwakho, kanye, hhayi kuyo yonke iphozishini enjalo engezansi; umklomelo wokweqa (wokudlula) ulandela isimiso esifanayo sephozishini eseduze kakhulu (kuhlolwe ngomhla ka-26 Septhemba 2026). I-staking yomuntu siqu ye-V12 ingu-50,000 USDT, kuhlolwe ngalo lolo suku.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 10; Idokhumenti yomholi, Septhemba 2026, Ingxenye IV

I-V1 idingani?

U-$500 owufake ku-staking ngokwakho, abangeniswe ngqo abathathu abano-$100 noma ngaphezulu ngamunye, no-$10,000 emlenzeni ngamunye kwemibili. Imali engenayo yesikhundla yansuku zonke eshiwo ku-V1: cishe u-$15 kuya ku-$25, ishintsha ngaphakathi kwebanga ngokwamaphuzu e-AICS.

Njengoba isethulo sisho: abantu abathathu namaqembu amabili ka-$10,000. I-Origin yayidinga amaqembu amathathu ka-$50,000.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 10

Ayini amaphuzu e-AICS?

Amaphuzu kuyo yonke i-akhawunti, ashicilelwe ngomhla ka-24 Septhemba 2026 njenge-Score = 0.2H + 0.4C + 0.2A + 0.2R esikhathini esiqhubekayo sezinsuku ezingu-30: okuphethwe 0.2, ukusebenza 0.4, umnikelo 0.2, ukugcinwa 0.2, kanti u-0.4 ekusebenzeni uhlolwe ngalo lolo suku. Ahambisa imiklomelo ngaphakathi kwamabhandi ayo, ngakho ama-V6 amabili angakhokhelwa ngokuhlukile. Uhlelo lukhokhela ikhwalithi yokubamba iqhaza, hhayi ubukhulu kuphela.

Izinhlamvu njengoba zibhaliwe azizichazi izici; izisindo ezingenhla ziyincazelo ehloliwe. Ukuthi isici ngasinye silinganiswa kanjani akukashicilelwa. Kusho lokho uma ubuzwa.

Umthombo: Idokhumenti yomholi, Septhemba 2026, Ingxenye IV

Ngilichaza kanjani uhlangothi lweqembu kumholi omusha?

Imali engenayo yamazinga kuqala: 8, 4, 2 amaphesenti e-ROI emazingeni amathathu, njalo emahoreni angu-12, amandla ayadingeka ukuze uyikhiphe. Bese kuba izitebhisi: imilenze emibili, omkhulu unikeza isikhundla, omncane uyakhokha. Bese kuba i-V1 ngamazwi alula: $500, abantu abathathu, amaqembu amabili ka-$10,000. Yima lapho. Uma bebuza nge-V6 nangaphezulu, yisho ukuthi kulinganiselwa, okokubhekisela kuphela.

Iningi labahlanganyeli lizohlala ku-V1 kuya ku-V3. Yethula izikhundla eziphezulu njengesakhiwo sohlelo, hhayi njengecebo lomuntu ophambi kwakho. Umlenze omncane yiwona onquma kuzo zonke izikhundla: buza ngawo kuqala.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 10, amanothi; Idokhumenti yomholi, Septhemba 2026, Ingxenye VII

Imihlangano yomphakathi ixhaswa kanjani?

Ngaphansi kwezinqubomgomo zemihlangano yomphakathi zangomhla ka-26 Agasti 2026: umphakathi onemfanelo edingekayo ufaka isicelo kusengaphambili nemali encike ebukhulwini, 500 USD emhlanganweni wabantu abangu-30, 800 USD wabangu-50, 1,500 USD wabangu-100. Imihlangano ibanjelwa ku-inthanethi noma eqenjini lomphakathi, iphethwe ngabaholi bendawo kukhona namalungu eqembu eliyinhloko. Uma ukusebenza ngemuva komcimbi kufinyelela okungenani ku-150% wemali, okweqile kubuyiselwa njengomklomelo; uma kungenjalo, umphakathi osingathile ukhokha ingxenye yezindleko zomcimbi.

Faka isicelo ezinsukwini ezintathu kuya kwezinhlanu ngaphambili, khokha nge-elekthronikhi, thola imvume ngaphambi komcimbi, futhi ugcine izithombe zesikrini nesixhumanisi. Abahlanganyeli bahambela wonke umhlangano. Inqubomgomo icela abesifazane abakhulelwe, abantu abangaphezu kweminyaka engu-65 nanoma ubani onesifo senhliziyo noma umfutho wegazi ophakeme ukuthi bangazibandakanyi noma batshele abahleli kuqala. Njengoba kushicilelwe; hlola imigomo yamanje neqembu lokusebenza.

Umthombo: Umtapo wezinsiza we-SpartanOS (t.me/SpartanOSLibrary), isihloko senqubomgomo yoxhaso, 26 Agasti 2026

Isixhumanisi sokumema sisebenza kanjani, futhi esami ngisithola kuphi?

I-dApp ibeka yonke i-akhawunti ngaphansi komuntu okwaxhunywa ngesixhumanisi sakhe okokuqala, futhi lokhu kuboshwa akunakushintshwa kamuva. Isixhumanisi se-Phalanx ngu-spartanar.org/myinvite?code=0x83659d0BDF57ac8550060E869fC5926e52E2e5Fe; ikhodi yikheli lesikhwama sommemile. Bhalisa ngesixhumanisi omholi wakho akunika sona. Isixhumanisi sakho siqu sisekhasini elithi My Invite ku-dApp, kanye nesamba sabamenyiwe, abangeniswe ngqo bakho, ukusebenza kweqembu namarekhodi okumema ngokwezinga.

Imali engenayo yamazinga (8%, 4%, 2% we-ROI ezizukulwaneni ezintathu) nesikhundla ekhasini le-DAO kulandela kulokho kuboshwa. Ongeniswe ngqo ubalwa njenge-node kusukela ku-100 USDT. Ungalokothi ubhalise ngesixhumanisi esitholakale engxoxweni esobala: umlenze ungunomphela.

Umthombo: spartanar.org, kufundwe ngomhla ka-24 Septhemba 2026

Yini indawo enkulu nendawo encane?

Umlenze wakho omkhulu kunayo yonke uyindawo enkulu; yonke eminye imilenze ihlanganisiwe iyindawo encane. Kuhlolwe ngomhla ka-24 Septhemba 2026. Indawo enkulu inikeza isikhundla; umklomelo we-DAO ukhokhwa endaweni encane, ngezinga lebhulokhi lansuku zonke, ngaphakathi kwebhandi lesikhundla. Imilenze emibili efinyelela isidingo yiyona encane edingekayo; imilenze eminingi ifaka okuningi komthamo ofanayo endaweni encane.

Isibonelo seprojekthi se-V1: umlenze oqinile ka-10,000 neminye imilenze ndawonye ku-10,000. Esibalini sezikhundla, engeza yonke imilenze onayo; ikhasi lithola indawo enkulu bese lihlanganisa okusele.

Umthombo: Phalanx Community, kuhlolwe ngomhla ka-24 Septhemba 2026; isibonelo se-V1 se-Spartan OS

Umehluko phakathi kwezikhundla usebenza kanjani?

Umehluko wamaphesenti phakathi kwezikhundla ezimbili ukhokhelwa isikhundla esiphezulu. Kuhlolwe ngomhla ka-24 Septhemba 2026 ngesibonelo seprojekthi uqobo: uma i-V7 ikhokha u-60% kanti i-V8 ikhokha u-70%, i-V8 ithola umehluko ongu-10% emlenzeni waleyo V7. Ibhonasi yesikhundla esifanayo nomugqa wokweqa (wokudlula) kwahlolwa ngomhla ka-26 Septhemba 2026: 10% kuya ku-15% wenzuzo efanelekile yephozishini eseduze kakhulu yesikhundla esifanayo, noma eseduze kakhulu yesikhundla esiphezulu, ngaphansi kwakho, kanye, hhayi kuyo yonke iphozishini enjalo emugqeni ongezansi.

Isisekelo umehluko osebenza kuso asikachazwa; isibali siwusebenzisa endaweni encane elinganiselwe yomholi wesikhundla esiphansi ngezinga lebhulokhi, futhi siyakusho lokho. Caphuna umthetho, hhayi isibalo sesibali.

Umthombo: Phalanx Community, kuhlolwe ngomhla ka-24 Septhemba 2026

I-V10, V11 ne-V12 zidingani?

Imilenze emibili ngayinye ephethe isikhundla esingezansi: imilenze emibili ye-V9 ku-V10, imilenze emibili ye-V10 ku-V11, imilenze emibili ye-V11 ku-V12. Kuhlolwe ngomhla ka-24 Septhemba 2026; kuyisidingo sesikhundla, hhayi somthamo. Iphozishini yomuntu siqu nenani lama-node: V10 18,000 USDT nama-node angu-18, V11 20,000 no-19, V12 50,000 no-20 (isibalo se-V12 sihlolwe ngomhla ka-26 Septhemba 2026).

Ikhasi le-pool yemiklomelo likubhala njengo-"2 V9s"; abanye abagqugquzeli babekufunde njengomthamo ophindwe kabili. U-25,000 obhalwe ku-V12 ekhasini 16 lokuhlaziywa kwemodeli yezomnotho akufanele usetshenziswe: iphrojekthi ihlolile ngomhla ka-26 Septhemba 2026 ukuthi u-50,000 USDT yi-staking yomuntu siqu ye-V12, futhi yathi ayikho ipharamitha ehlukile yesisindo sokubusa.

Umthombo: Phalanx Community, kuhlolwe ngomhla ka-24 Septhemba 2026; Ukuhlaziywa kwemodeli yezomnotho, ikhasi 16

Iyini ifomula ye-AICS?

Njengoba kushiwo ngomhla ka-24 Septhemba 2026: Score = 0.2H + 0.4C + 0.2A + 0.2R, esikhathini sokuhlola esiqhubekayo sezinsuku ezingu-30, nesisindo esingu-0.4 ekusebenzeni (kuhlolwe ngalo lolo suku) no-0.2 ngamunye kokuphethwe, emnikelweni nasekugcinweni. Ukuhlola kubheka ukubamba iqhaza kwabanikazi, ama-akhawunti asebenzayo, isilinganiso sokubamba iqhaza kwesikhathi eside, ukugcinwa, ukusebenza nomnikelo emkhakheni nase-liquidity yawo. Amanethiwekhi amabili esikhundleni esifanayo akudingeki athole izikhuthazo ezisebenzayo ezifanayo ncamashi.

Izinhlamvu njengoba zibhaliwe azizichazi izici; ukwaziswa kwangoSepthemba kwanikeza okuphethwe 0.2, ukusebenza 0.4, umnikelo 0.2, ukugcinwa 0.2, futhi u-0.4 ekusebenzeni wahlolwa ngomhla ka-24 Septhemba. Sho ifomula njengoba ibhaliwe nezisindo njengoba zihloliwe. Amaphuzu angakhuphuka ngokubamba iqhaza kwesikhathi eside, ukugcinwa, amakheli asebenzayo nomnikelo owakhayo, futhi ehle ngokuthengisa okukhulu, ukwehla kokugcinwa noma umnikelo obuthakathaka ku-liquidity.

Umthombo: Isitatimende sokuthi imali engena kuphrothokholi iphathwa kanjani, esatholwa ngomhla ka-24 Septhemba 2026, siphinde sashicilelwa esigabeni esithi Okusemthethweni

Ingabe iqembu elikhulu lihlala lizuza kakhulu?

Akwenziwanga ngaleyo ndlela. I-Spartan OS ithi imiklomelo yenethiwekhi yesikhathi eside akuhloswe ukuthi incike kuphela enanini labantu umuntu abangenisayo noma emthamweni inethiwekhi ewukhiqizayo. I-AICS ihlola ikhwalithi nempilo yokubamba iqhaza ngesisekelo esiqhubekayo sezinsuku ezingu-30, ngakho imiklomelo ixhumana kakhulu nekhwalithi yenethiwekhi: ukubamba iqhaza kwesikhathi eside, ukugcinwa, amakheli asebenzayo nomnikelo owakhayo kukhuphula ukuhlolwa; ukuthengisa okukhulu nokwehla kokugcinwa kukwehlisa.

Lokhu kushintsha indlela umholi akha ngayo. Abantu abayishumi abenza uku-stake, abahlalayo futhi abasebenzisa izinhlelo zokusebenza bathola amaphuzu angcono kunabangamashumi amahlanu abangena baphume. Izitebhisi zezikhundla zisabeka izidingo; i-AICS ihambisa inkokhelo ngaphakathi kwebhandi. Bonisa kokubili, futhi usho ukuthi yikuphi umholi akulawulayo usuku nosuku.

Umthombo: Isitatimende sokuthi imali engena kuphrothokholi iphathwa kanjani, esatholwa ngomhla ka-24 Septhemba 2026, siphinde sashicilelwa esigabeni esithi Okusemthethweni

Ibhonasi yesikhundla esifanayo ikhokhwa kanjani, futhi emaphozishinini amangaki?

10% kuya ku-15% wenzuzo efanelekile yephozishini yesikhundla esifanayo eseduze kakhulu ngaphansi kwakho, kanye. Isibonelo seprojekthi uqobo: i-V5 enama-akhawunti amabili e-V5 ngaphansi kwayo, elilodwa esizukulwaneni sokuqala nelinye kwesesibili, ikhokhelwa kuphela nge-V5 yesizukulwane sokuqala. Awuwutholi futhi umklomelo wesikhundla esifanayo kuyo yonke i-V5 engezansi kulowo mugqa. I-V8 ene-V8 eqenjini ithola u-10% kuya ku-15% wenzuzo efanelekile yephozishini ye-V8 efanelekayo eseduze kakhulu. Kuhlolwe ngomhla ka-26 Septhemba 2026.

Umklomelo wokweqa (wokudlula) ulandela isimiso esifanayo sephozishini eseduze kakhulu. Ukuthi u-10% noma u-15% usebenza nini ngaphakathi kwebanga akushiwo; caphuna ibanga. Isibali sisebenzisa umthetho kumholi wesikhundla esifanayo oseduze kakhulu emlenzeni ngamunye, ngesisekelo esilinganiselwe, futhi siyakusho lokho. Ukuthi amaphozishini amabili esikhundla esifanayo emilenzeni emibili ehlukene ayakhokha yini womabili akukashiwo: amazwi athi iphozishini eseduze kakhulu ngaphansi kwesakhiwo sakho, eyodwa, futhi isibonelo singumugqa owodwa.

Umthombo: Izimpendulo zemibuzo emine yokulandelela, ezatholwa ngomhla ka-26 Septhemba 2026, zaphinde zashicilelwa esigabeni esithi Ukuhlolisisa

Iyini i-staking yomuntu siqu ye-V12, 25,000 noma 50,000?

50,000 USDT, njengoba ithebula lezikhundla lenguqulo yabaholi yamanje likubhala. Iphrojekthi ithi u-50,000 uyisidingo se-staking yomuntu siqu ku-V12, nokuthi ayikho ipharamitha ehlukile yesisindo sokubusa. U-25,000 osekhasini 16 lokuhlaziywa kwemodeli yezomnotho akufanele usetshenziswe. Kuhlolwe ngomhla ka-26 Septhemba 2026.

Ngakho izitebhisi zifundeka kanje: i-staking yomuntu siqu V10 18,000, V11 20,000, V12 50,000 USDT, nama-node angu-18, 19 no-20 nemilenze emibili ngayinye ephethe isikhundla esingezansi. Uma ilungu likukhombisa ikhasi lika-25,000, yisho ukuthi ithebula elivela kulo selithathelwe indawo yisibalo senguqulo yabaholi, bese ukhomba le mpendulo.

O² NENTENGO

Okuvikela intengo, lokho okungakwazi ukukwenza, intela yokuthengisa.

Yini i-O²?

Iphrothokholi yokulinganisa ezivumelanisayo ye-RM. I-Spartan OS iyibeka njengeyokuqala emhlabeni: imodeli ye-Olympus DAO ne-Origin ye-liquidity ephethwe yiphrothokholi, ethuthukisiwe ukuze imithetho ivumelane nemakethe esikhundleni sokuthi imakethe ivumelane nemithetho emisiwe. Ilinganisa ukunikezwa nesidingo futhi ivikela i-liquidity. Ayiyibeki intengo.

Izendlalelo ezine: i-liquidity (i-liquidity ephethwe yiphrothokholi kanye nokuphathwa kwe-liquidity okuguquguqukayo), ukuziphatha (ukuthenga kabusha, imiklomelo nokulawulwa kohlangothi lokuhweba), isamba esikhona (ukushisa, ukuthenga kabusha nezinketho zokushisa amathokheni e-LP) nenjini ezivumelanisayo (ukuhlaziywa kwesimo semakethe nokukhethwa kwempendulo). Izinguquko zentela ezibonakalayo ziyigobolondo langaphandle kuphela.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 11; Isethulo sencazelo eyinhloko ye-O², Spartan OS, Septhemba 2026

I-O² ibhekani?

Intengo emaphakathi elinganiswe ngesikhathi, intengo emaphakathi yokuhweba, umthamo wokuthenga, umthamo wokuthengisa, isilinganiso sokuthenga nokuthengisa nokujula kwe-liquidity, kuhlolwa kabusha njalo emahoreni amathathu. Ukuthatha inzuzo okujwayelekile nokuthengisa ngokwethuka kungehlisa intengo kokubili, kodwa akuyona into efanayo. Uhlelo lusabela kuphela uma ukuguquguquka kuba ukungalingani kwangempela. Intengo iwuphawu, hhayi isinqumo.

Injini yemizwa yokwesaba nokuhaha ihlala eceleni: ukuhaha okweqile kungaholela ekujahweni kwentengo okungazinzile, ukwesaba okweqile kungabangela ukuphuma okugxilile, futhi iphrothokholi ihlobanisa isimo samanje necebo lokwenza.

Umthombo: Isethulo sencazelo eyinhloko ye-O², Spartan OS, Septhemba 2026, amaslayidi 4 no-7

Iyini intela yokuthengisa?

Ukuthenga kumahhala. Ukuthengisa kuqala ku-5%. Uma intengo yehla ngaphezu kuka-5% uma iqhathaniswa nesilinganiso sayo samahora amathathu, intela ikhuphuka ngamabhandi: ukwehla okungu-5% kuya ku-8% kukhokha u-8% kuya ku-13%, ukwehla okungu-8% kuya ku-15% kukhokha u-13% kuya ku-20%, ukwehla okungu-15% noma ngaphezulu kukhokha u-20% kuya ku-30%. Ukuthengisa kancane kushibhile; ukulahla ngobuningi akunjalo. Inhloso ukwehlisa ijubane lokuwa okulandelanayo, hhayi ukuvimba ukuphuma.

Entelweni engaphezu kuka-5%, u-65% uyashiswa kanti u-35% uya kubanikazi besikhathi eside. U-1.2% omisiwe wakho konke ukuthengisa uthenga kabusha i-RM ne-GD bese uyakushisa. Okubeka intela ngaphakathi kwebhandi akushicilelwe: caphuna ibhandi. Sho ngokusobala ukuthi ukuphuma ngesikhathi sokwehla kwemakethe kubiza kakhulu ngokuhlosiwe.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 11; Idokhumenti yomholi, Septhemba 2026, Ingxenye V

Intela yokuthengisa iyaphi?

1.2% wakho konke ukuthengisa uthenga kabusha i-RM ne-GD bese uyakushisa. Kunoma iyiphi intela eyengeziwe engaphezu kuka-5%, u-65% ushiswa ngokuphelele kanti u-35% uya kunoma ubani onama-$200 noma ngaphezulu ephozishinini yezinsuku ezingu-360 noma 540. Isamba esikhona siyehla; abanikazi bakhokhelwa ukwehla kwentengo.

Ukwabiwa kwezinkokhelo okushicilelwe ekuthengiselaneni kungu-5%: 0.5% isikhwama senkundla, 1.2% isikhwama sokuthenga kabusha, 1.3% isikhwama somphakathi, 2.0% isikhwama somkhakha. Imiklomelo yentela eyengeziwe ikhiywa amahora angu-72 futhi yabiwe ngokwesisindo; indlela yokulinganisa isisindo ayikashicilelwa.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 11; Idokhumenti yomholi, Septhemba 2026, Ingxenye V

I-O² iziphatha kanjani ngesikhathi sokwehla, ihora nehora?

Njalo emahoreni amathathu imakethe ihlolwa kabusha ngedatha entsha. Ukungalingani kokuqala kuqalisa ukuvikela. Ukuzinza kuqalisa ukuhoxiswa kwalokho kuvikela kancane kancane. Igagasi elisha lokuthengisa limisa okwesikhashana ukuhoxiswa futhi livuselele ukuvikela okuqinile. Uma ukululama kuqhubeka, ukuhoxiswa kungaphela phakathi kwamahora angu-24.

I-O² iziphatha njengomjikelezo wempendulo, hhayi njengeswishi yokuvula nokuvala. Umjikelezo wokwenza uhamba kanje: idatha yemakethe, ukuhlola, isu, ukuhlola ukwenziwa, ukwenza, ukuhlola kabusha emahoreni amathathu. Isu elivumelekile lisadinga isikhathi esivumelekile sokwenza: uma ukuguquguquka kweqa kungena ebangeni elingajwayelekile, ukwenza kungahlehliswa.

Umthombo: Isethulo sencazelo eyinhloko ye-O², Spartan OS, Septhemba 2026, amaslayidi 6 no-9

Kwenzekani ezimweni ezeqisayo?

Amathuluzi ajulile ohlangothi lwesamba agcinelwe izimo zobungozi ezingajwayelekile. Ukushiswa kwamathokheni e-LP akulona ithuluzi lansuku zonke: kucatshangelwa kuphela uma kunokwehla okungajwayelekile okuqhubekayo nokuwohloka kokujula kwe-LP, kulawulwa yizimo zesexwayiso ze-TWAP nemvume yokubusa. Amazinga obungozi ahlukene avula amathuluzi ahlukene; indlela eyodwa ayilokothi icelwe ukuxazulula yonke into.

Idokhumenti yomholi ibala umqondo ofanayo njengokushiswa kwe-pool eyisisekelo: indlela yokugcina engenalo izinga lokuqalisa elishicilelwe. Amapharamitha enjini yemakethe ezivumelanisayo nawo awakashicilelwa. Ungachazi ukuthi isebenza kanjani ngaphezu kwalokhu, ngoba iphrojekthi ayikakwenzi.

Umthombo: Isethulo sencazelo eyinhloko ye-O², Spartan OS, Septhemba 2026, islayidi 8; Idokhumenti yomholi, Septhemba 2026, Ingxenye V

Yini i-O² engenakuyenza?

Ukwenza isidingo. Ngamazwi eprojekthi uqobo, iphrothokholi ingathenga isikhathi; ukuvumelana kuphela okudala ukwesekwa okuhlala njalo. I-O² ingavikela i-liquidity, yehlise ijubane lokuthengisa okugxilile futhi inciphise ingcindezi yohlangothi lwesamba. Imakethe inquma intengo.

Phendula umbuzo abawucabangayo ngaphambi kokuba bawubuze: yini evimbela ukuthi iwe njengezinye. Impendulo eqotho ukuthi iphrothokholi ivikela i-liquidity futhi yehlise ijubane lokuwa okulandelanayo, futhi ayithembisi intengo. Bese kuba amakhadi amane: i-turbine, intela, ukushisa, i-pool.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 11, amanothi; Isethulo sencazelo eyinhloko ye-O², Spartan OS, Septhemba 2026, amaslayidi 10 no-12

Liyini isondo lomnotho le-Spartan OS?

Ukukhula kuqhuba imiklomelo. Imiklomelo iqhuba isidingo sokuthenga, ngoba yonke inkokhelo idlula ku-turbine. Isidingo sokuthenga siqinisa ukwesekwa. Ukwesekwa kuqinisa ukuzethemba. Ukuzethemba kubasa igagasi elilandelayo lokukhula. Ukulingana kwephrothokholi nesidingo somkhakha kuyakhulisana.

Umthombo: Isethulo sencazelo eyinhloko ye-O², Spartan OS, Septhemba 2026, islayidi 11

I-O² isabela kuphi ngempela?

Ukunikezwa nesidingo, hhayi intengo yodwa. Ngamazwi eprojekthi, intengo ingumphumela; ukunikezwa nesidingo kuyimbangela. Njalo emahoreni amathathu i-O² ifunda umthamo wokuthenga, umthamo wokuthengisa, i-TWAP, intengo emaphakathi yokwenziwa, isilinganiso sokuthenga nokuthengisa, ukujula kwe-liquidity nezimo zokunikezwa nesidingo zizonke. Uma ukungalingani kubalulekile ikhuphula ukuvikela kohlangothi lokuthengisa; uma izimo zibuyela ebangeni elinempilo yehlisa ukuvikela kancane kancane, futhi ukubuyela ezingeni eliyisisekelo kudinga ukuthi izimo zihlale zinjalo ngokuqhubekayo.

Isitatimende siyibiza ngokuthi ivalvu yokuphepha ezivumelanisayo esendlalelweni sokwenza. Kusho lokho ngamazwi alula: yehlisa ijubane lokuwa okulandelanayo futhi inike i-liquidity isikhathi; ayinqumi intengo futhi ayivimbi muntu ukuthi athengise.

Umthombo: Isitatimende sokuthi imali engena kuphrothokholi iphathwa kanjani, esatholwa ngomhla ka-24 Septhemba 2026, siphinde sashicilelwa esigabeni esithi Okusemthethweni

Izindlela zingakuvimba yini ukuwa kwemakethe?

Cha, futhi iphrojekthi iyakusho lokho. Iphrothokholi ingaphatha izindlela; ayikwazi ukulawula ukuziphatha kwabantu. Ngisho ne-O², ukuthengisa okukhulu okungazelelwe nokushaqeka kwemakethe akunakugwenywa ngokuphelele. I-O² iphatha ukulingana kokunikezwa nesidingo kanti i-AICS iphatha impilo yenethiwekhi; zombili zinciphisa ubungozi futhi ayikho esusa inkululeko yanoma ubani yokuthengisa. Yingakho i-Spartan OS ithi igcizelela imfundo yokuvumelana, imihlahlandlela yomphakathi nesiko lesikhathi eside.

Sebenzisa umugqa weprojekthi uqobo: izindlela zigcina ukulingana, ukuvumelana kwakha inani lesikhathi eside. Futhi kuyisiphetho esiqotho sanoma iyiphi ingxoxo nge-O². Ukuthi umklamo uyasebenza yini kufanele kwahlulelwe ngedatha ye-on-chain ngokuhamba kwesikhathi, hhayi ngencazelo.

Umthombo: Isitatimende sokuthi imali engena kuphrothokholi iphathwa kanjani, esatholwa ngomhla ka-24 Septhemba 2026, siphinde sashicilelwa esigabeni esithi Okusemthethweni

Yini evimbela i-RM ukuthi ibe yithokheni elikhishwayo bese lithengiswa?

Izindlela eziyisikhombisa ezinhlangothini zombili zebhalansi, njengoba i-Spartan OS izibala: ukukhulula okulawulwayo; isidingo se-Turbo se-1:1; ukukhiya kwesikhathi eside ngamabhondi ezinsuku ezingu-360 no-540, i-staking yesikhathi eside nokunqwabelana kwenzalo; ukushisa, lapho i-RM ishiselwa amandla aphindwe ka-2 kuya ku-6 enanini layo kanye ne-staking yamandla esakhiweni sezinsuku ezingu-360; i-AICS; i-O²; nesidingo sezinhlelo zokusebenza. Ukuthenga kwe-Turbo kuhlala esikhathini sokuthula samahora angu-24 futhi intela yokuthengisa eyisisekelo ingu-5%, ngakho ukuthenga akunakuba yi-oda lokuthengisa lobukhulu obufanayo ngemuva kwehora elilodwa.

Izilinganiso iphrojekthi ethi zibalulekile: isamba esisha se-RM, isamba esijikelezayo sangempela, isidingo sokuthenga se-Turbo, isidingo sezinhlelo zokusebenza, i-RM ekhiywe isikhathi eside, i-RM eshisiwe nokujula kwe-liquidity, kunokuthi i-RM engakanani ekhiqizwayo. Kanye nomngcele wayo, ngamazwi ayo uqobo: lezi zindlela zithuthukisa isakhiwo sokunikezwa nesidingo, futhi akukho siqinisekiso sentengo; isidingo esizinzile kufanele sikhule ngokwanele ukuze simunce isamba esizinzile. Nge-O²: ukubuyela okusheshayo kakhulu ezingeni eliyisisekelo lika-5% kungaphakathi kwamahora angu-24, futhi kuphela uma izimo zokululama zihlala zinjalo ngokuqhubekayo emijikelezweni yamahora amathathu. Ngesiphindaphindi sokushisa: ezinsukwini ezimbili kamuva iphrojekthi yathi ibanga lokuphindwa ka-2 kuya ku-6 akufanele leqe amapharamitha e-dApp abukhoma, abonisa u-557% wokushisa no-260% we-staking yamandla ngomhla ka-26 Septhemba 2026, kokubili kuyaguquguquka.

Umthombo: Impendulo emibuzweni eyisikhombisa yokuhlolisisa, eyatholwa ngomhla ka-24 Septhemba 2026, iphinde yashicilelwa esigabeni esithi Ukuhlolisisa

Uma i-O² ikhona, kungani iphrojekthi iqhubeka ikhuluma ngabantu?

Ngoba izindlela zilungisa amapharamitha futhi azikwazi ukulawula ukuziphatha, ngamazwi eprojekthi uqobo. I-O² ifunda ukunikezwa nesidingo, i-TWAP, ukusebenza kokuthengiselana, izilinganiso zokuthenga nokuthengisa nokujula kwe-liquidity, futhi ikhuphule ukuvikela uma imakethe ingalingani. I-AICS ilinganisa impilo yenethiwekhi ngamaphuzu. Ayikho kuzo engavimba umuntu ukuthi abe nokuhaha lapho intengo ikhuphuka noma ukwesaba lapho yehla, yingakho i-Spartan OS iqamba ukubusa komphakathi njengesisekelo sesibili eceleni kwezindlela.

I-Olympus DAO iyisibonelo iphrojekthi esisebenzisayo: ukuklanywa kwezindlela kunomthelela omkhulu, kodwa izindlela zodwa azizixazululanga zonke izinkinga zemakethe. Sho zombili izingxenye. Umgqugquzeli othengisa i-O² sengathi iyisithembiso esiqinile uphikiswa umbhalo weprojekthi uqobo.

Umthombo: Harry (Spartan OS), 'Kusukela ekululameni okumise okuka-U kuya emkhakheni womhlaba wonke', okwadluliselwa esiteshini se-Phalanx ngomhla ka-26 Septhemba 2026, kwaphinde kwashicilelwa kuphelele esigabeni esithi Okusemthethweni

Isikhwama ne-bridge

Engeza inethiwekhi, i-bridge, i-gasDAI, ngenisa amathokheni, i-swap, dlala.

Ngiqala kanjani, isinyathelo ngesinyathelo?

Faka i-Bitget Wallet bese ulondoloza amagama okuvuselela (seed phrase). Shintshela ku-Anubis Chain (i-chain ID 6714), noma uyengeze kwesinye isikhwama. Dlulisa nge-bridge amadola ambalwa e-DAI nge-app.anubisbridge.com noma nge-galebridge.net: leyo yi-gasDAI yakho yezinkokhelo. Letha i-USDT ku-Anubis ngendlela efanayo, inani elincane kuqala. Vula i-dApp ye-Spartan OS ngesixhumanisi sokumema somholi wakho noma ngekhodi yakhe bese uxhuma isikhwama. Bese uthenga ibhondi lezinsuku ezingu-540, kusukela ku-$1, ufunda intengo nomkhawulo esikrinini, futhi wenze uku-claim njalo emahoreni angu-12 nge-turbine.

Izinyathelo eziyisikhombisa, kusihlwa okukodwa. Isigaba esithi Ngena kuleli khasi sikuhambisa kukho konke, kusukela ekufakeni isikhwama kuya ebhondini lezinsuku ezingu-540 nokwenza uku-claim kokuqala, kanye nenguqulo ebhaliwe namavidiyo eqembu esinyathelweni ngasinye; ikhasi elilodwa 06 likufaka ekhasini elilodwa. I-staking akusona esinye salezi eziyisikhombisa: ifika ngemuva kokuba usungenile ohlelweni futhi unayo i-RM oyithenge kumholi wakho. Hlola yonke indlela entsha ngenani elincane kuqala.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 13; Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Ingxenye IV; Iqembu lamazwe ngamazwe le-Spartan OS, iqembu lomsebenzi, 25 Septhemba 2026 (ibhondi kuqala)

Akuphi amavidiyo ezifundo, futhi asebenzisa siphi isikhwama?

Esigabeni esithi Izifundo: izifundo ezingu-13, amavidiyo angamashumi amabili nanhlanu eqembu le-Phalanx, kusukela ekufakeni isikhwama (A1) kuya ekwenzeni uku-claim nge-turbine (D1) nendlela yokuphuma (B5). Khetha isikhwama sakho kanye phezulu esigabeni bese isifundo ngasinye sibonisa ividiyo yaso: i-Bitget Wallet ne-AstraCore kuyo yonke indlela, i-TokenPocket ezifundweni ezimbili zesikhwama. Isinyathelo ngasinye sesigaba esithi Ngena sibonisa amavidiyo angaso.

Izwi nemibhalo engezansi ngesiNgisi, imizuzu emibili kuya kwemine ngayinye, aqoshwe ezinhlelweni zokusebenza zangempela ekupheleni kukaSepthemba 2026. Amavidiyo akhomba isigaba 20, Izixhumanisi, ukuze uthole izilungiselelo zeketango namakheli amathokheni. Izikrini ziyashintsha, amapharamitha awashintshi; izinga elibonwa evidiyweni yizinga losuku lokuqoshwa.

Umthombo: Amavidiyo ezifundo eqembu le-Phalanx, atholwe ngomhla ka-2 Okthoba 2026

Zikuphi izilungiselelo zeketango namakheli amathokheni ashiwo emavidiyweni?

Isigaba 20, Izixhumanisi, siqala ngazo: igama lenethiwekhi Anubis, i-RPC https://rpc.anubispace.org, i-chain ID 6714, uphawu DAI (gasDAI), i-explorer https://browser.anubispace.org; kanye namakheli ama-smart contract e-RM, GD, USDT ne-DAI ku-Anubis, ngalinye linenkinobho yokukopisha. Qhathanisa izinhlamvu ezine zokuqala nezine zokugcina ngaphambi kokuthi ulondoloze elilodwa.

Uhlu oluphelele lwama-smart contract angamashumi amabili nanye, ngalinye lihlolwe ku-explorer, lusesigabeni esithi Imigomo yanamuhla. Thatha amakheli kuleli khasi noma ku-anubischain.ai, ungalokothi uwathathe engxoxweni.

Umthombo: Izinhlu ze-akhawunti yesevisi ye-Spartan OS, 25 no-26 Septhemba 2026; ikheli ngalinye lihlolwe ku-browser.anubispace.org

Yiziphi izilungiselelo zenethiwekhi zesikhwama?

Igama lenethiwekhi ANUBIS Mainnet. I-chain ID 6714 (nge-hex 0x1a3a). I-RPC URL https://rpc.anubispace.org. Uphawu lwemali gasDAI. I-explorer yamabhulokhi https://browser.anubispace.org. I-chain ID yinani elibalulekile: uma ingalungile, isikhwama sikunethiwekhi engalungile.

Ibhaliswe ku-chainlist.org/chain/6714. Hlola i-RPC uyiqhathanise ne-anubischain.ai ngaphambi kokuyishicilela noma kuphi.

Umthombo: Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Ingxenye I noMhlahlandlela 01

Umuntu omusha kufanele asebenzise siphi isikhwama?

I-Bitget Wallet ngezinyathelo ezimbalwa kakhulu: i-Anubis Chain isifakiwe ngaphakathi, i-swap nokudlulisa phakathi kwamaketango kusebenza ngaphakathi kwesikhwama, futhi uxhaso lwe-gas olufika ekudluliseni okuthathu okungadingi i-gas ngosuku lusebenza ngayo. I-AC Wallet (AstraCore) iqanjwe yi-Spartan OS njengomlingani wesikhwama wamasu onconywa ngokusemthethweni futhi iyisango lemikhankaso ye-AstraCore. I-OKX Wallet, i-TokenPocket ne-Binance Wallet nazo zisekela i-Anubis; i-MetaMask idinga ukuthi inethiwekhi yengezwe ngesandla.

Noma ngabe yisiphi isikhwama: bhala amagama okuvuselela ephepheni, ungalokothi uwathathe isithombe, futhi ungalokothi uwathayiphe kunoma yini ewacelayo. Amavidiyo ezifundo kuleli khasi abonisa i-Bitget, i-TokenPocket, i-OKX ne-Binance Wallet.

Umthombo: Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Ingxenye IV; Umhlahlandlela we-Anubis Chain, 20 Septhemba 2026

Ngiyidlulisela kanjani i-USDT noma i-DAI ku-Anubis?

Nge-bridge esemthethweni: i-Anubis Bridge ku-app.anubisbridge.com noma i-GaleBridge ku-galebridge.net, kusuka ku-Ethereum, BNB Chain noma Polygon. Xhuma isikhwama eketangweni lomthombo, ukhethe impahla ne-Anubis (6714) njengendawo okuyiwa kuyo, uvume, udlulise nge-bridge, bese uhlola ukufika ku-browser.anubispace.org. Inani elincane lokuhlola kuqala.

I-Anubis Bridge imahhala futhi ithatha amahora amabili kuya kwamathathu; i-GaleBridge ithatha imizuzwana futhi ikhokhisa u-0.5% kuya ku-1.5%, njengoba kushiwo emhlanganweni wangomhla ka-7 Septhemba. I-Bitget Wallet idlulisa nge-bridge ngaphakathi kwesikhwama. I-Bridgers ne-Stargate ziyizindlela zezinkampani zangaphandle i-Anubis engaziphathi. Ungalokothi ulandele isixhumanisi se-bridge esivela emlayezweni.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, islayidi 13; Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Imihlahlandlela 06 kuya ku-08

Ukuthengiselana kwami kuyehluleka ngenxa ye-gas. Ngenzeni?

Awunayo i-gasDAI. Dlulisa nge-bridge inani elincane le-DAI nge-bridge esemthethweni; ibhalansi efikile iyi-gas yakho. Amadola ambalwa amboza izinkulungwane zokuthengiselana. Ungalokothi uthenge i-gasDAI kunoma ubani oyinikeza ngqo.

Umthombo: Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Umhlahlandlela 09

I-RM noma i-GD ayiveli esikhwameni sami.

Amathokheni awaveli uze ungenise ikheli lawo lenkontileka. Thatha ikheli esigabeni esithi Imigomo yanamuhla kuleli khasi (RM 0x2e04…e59d, GD 0x21b6…1b4c, kuhlolwe ku-explorer ngomhla ka-24 Septhemba 2026), uqhathanise izinhlamvu ezine zokuqala nezine zokugcina, bese usebenzisa isikrini sesikhwama sokungenisa ithokheni (Import token). I-RM ne-GD ziyizinkontileka ezihlukene: zingenise zombili. Uma uphawu olufundwa yisikhwama lungafani, yima: ikheli alilona elifanele.

Umthombo: Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Isiqondiso 10

Ngiyithenga kanjani i-RM?

Ku-RocketSwap, inkundla yokushintshana yeketango ngokwalo, usebenzisa i-USDT edluliswe nge-bridge. Yivule ngesixhumanisi esiku-anubischain.ai, uxhume isikhwama ku-Anubis, ukhethe i-USDT iye ku-RM, ufunde isilinganiso (umthelela entengweni nenani elincane ozolithola), uvume kanye, bese wenza i-swap. Ukuthengiselana ngakunye kubiza ingxenyana yesenti nge-gasDAI.

Umthelela omkhulu entengweni usho ukuthi i-pool incane uma iqhathaniswa nokuhweba kwakho: nciphisa inani noma ulihlukanise. Ngenxa ye-mempool ebethelwe, akekho ongandulela (front-run) i-swap yakho. Hlola ku-explorer usebenzisa i-hash yokuthengiselana.

Umthombo: Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Isiqondiso 11

Ngikuhlola kanjani ukuthengiselana noma ikheli?

Kunamathisele ku-browser.anubispace.org. Ikheli likhombisa ibhalansi yalo ye-gasDAI, amabhalansi amathokheni nakho konke ukuthengiselana. I-hash yokuthengiselana ikhombisa isimo, ibhulokhi, inkokhelo, umthumeli, umamukeli nokudluliswa kwamathokheni. Inkontileka yethokheni ikhombisa igama, uphawu, isamba esikhona nabanikazi; uma igama lingafani, ikheli alilona elethokheni langempela.

Izithombe-skrini ze-explorer ziqeda izingxabano eziningi. Ikhasi lasekhaya libala amabhulokhi amasha kakhulu nesikhathi esiphakathi kwawo, futhi yilapho kubonakala khona isikhathi sebhulokhi samanje.

Umthombo: Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Isiqondiso 13

Izinkinga ezivamile nokufanele ukwenze

Ibhalansi engalungile ngemva kokudlulisa nge-bridge: linda umzuzu, hlola i-explorer, ungenise ithokheni. Kuyehluleka ngenxa ye-gas: dlulisa i-DAI encane nge-bridge. I-MetaMask ithi i-chain ID ayifani: i-RPC ayilungile, yifake kabusha. Okudluliswe nge-bridge akufikanga: hlola ukuthengiselana kokukhiya eketangweni lomthombo, hlola ukuthi indawo okuyiwa kuyo ingu-6714, unikeze isikhathi. Uphawu lwethokheni olungalungile: ikheli alilungile, susa ithokheni bese ulingenisa kabusha. Uhlelo lokusebenza aluxhumeki: shintshela isikhwama ku-Anubis (6714).

Umthombo: Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Ingxenye V

Ayini amakheli ezinkontileka e-USDT, USDC, DAI, ETH, BNB, POL ne-LGNS ku-Anubis?

Njengoba kushicilelwe yi-Anubis Chain: USDT 0xDfb6a28BC6DC51fed17c27C880F2c66cDd040A3e. USDC 0x7DD9c7cBC32dF500Fa3C06fD60Cd62C4E97B2eEF. DAI 0x83fd06F0846d9D90B3016bF670Efe2E0B11cDe14. Hlola ngalinye ku-browser.anubispace.org/tokens ngaphambi kokungenisa: igama, uphawu nesamba esikhona kumele kufane. Amakheli anjengoba ephrintiwe kudokhumenti ethi Imibuzo engu-100 (Julayi 2026) nasesitatimendeni sangomhla ka-28 Juni; iphutha lokubhala ku-PDF lingenzeka, i-explorer iyona okubhekiselwa kuyo. I-RM 0x2e045e1380f5f5b6e7550328910a7377c9fce59d ne-GD 0x21b6b0b3fab224921d3054d187e324a673411b4c, kuhlolwe ku-explorer ngomhla ka-24 Septhemba 2026; bheka isigaba esithi Imigomo yanamuhla.

Umthombo: Imibuzo nezimpendulo ezingu-100 ze-Anubis Chain, okusemthethweni, Julayi 2026, Q40; Isimemezelo esishicilelwe kabusha ku-SpartanOS Resource Library, 28 Juni 2026

Ukudlulisa nge-bridge kuthatha isikhathi esingakanani, futhi kubiza malini?

Isikhathi sincike eketangweni lomthombo: ku-Ethereum i-bridge ilinda ukuvunywa kwamabhulokhi angu-12 kuya ku-20, ngakho kuthatha imizuzu eminingana kusukela ekuqaleni kuya ekugcineni; uhlelo lwe-bridge lukhombisa isilinganiso samanje. Izindleko yi-gas yeketango lomthombo kanye nenkokhelo yesevisi ye-bridge eboniswa ohlelweni. Akukho nani elincane, akukho nani eliphezulu, akukho mkhawulo wesamba sonke. I-Anubis yeluleka ukuhlola kokuqala kwe-10 kuya ku-50 USDT.

Ocingweni lwangomhla ka-7 Septhemba abaholi bachaza i-Anubis Bridge njengemahhala kodwa ehamba kancane (amahora amabili kuya kwamathathu), ne-GaleBridge njengemizuzwana ngo-0.5% kuya ku-1.5%. Ukubuyisa kuyindlela ephambene: ukushisa ku-Anubis, ukukhululwa eketangweni lomthombo. Ungalokothi uthumele izimpahla ezisohlangothini lwe-Anubis ngqo enkundleni yokushintshana.

Umthombo: Imibuzo nezimpendulo ezingu-100 ze-Anubis Chain, okusemthethweni, Julayi 2026, Q30, Q42, Q43 ne-Q45

Ngingayithumela i-RM, noma i-USDT ese-Anubis, ngqo enkundleni yokushintshana?

Cha. I-USDT ebophelwe entengweni ese-Anubis iyimpahla ehlukile ku-USDT ese-Ethereum noma ese-BNB Chain, futhi izinkundla zokushintshana azizifaki ema-akhawuntini izimali ezithunyelwa zivela ku-Anubis Chain. Qala ubuyisele nge-bridge eketangweni lomthombo, bese uthumela usuka lapho. Ikheli elifanayo le-0x likhona kuwo wonke amaketango e-EVM, yingakho leli phutha lilula ukulenza.

Uma zithunyelwe ngephutha, izimpahla zihlala ku-Anubis ekhelini elilawulwa yinkundla yokushintshana kodwa engalibheki. Ukuzibuyisa kuncike ngokuphelele enkundleni yokushintshana. Kusho lokhu ngaphambi kokukhipha kokuqala, hhayi ngemva.

Umthombo: Imibuzo nezimpendulo ezingu-100 ze-Anubis Chain, okusemthethweni, Julayi 2026, Q41, Q52 ne-Q53

Isikhwama sami asikhombisi inani ledola le-USDT ese-Anubis. Ingabe kukhona okungalungile?

Ngokuvamile cha. Izikhwama eziningi azinawo umthombo wentengo wamathokheni aseketangweni elisha, ngakho ibhalansi iboniswa ingenalo inani ledola. Okubalulekile yibhalansi uqobo: yihlole ku-browser.anubispace.org ngokunamathisela ikheli lakho.

Uma nebhalansi ingekho, kungenzeka ukuthi ithokheni alikangeniswa, noma isikhwama sisenethiwekhini engalungile. I-chain ID 6714, bese ungenisa ikheli lenkontileka.

Umthombo: Ithimba losizo le-Anubis Chain eqenjini labagqugquzeli, Septhemba 2026; Imibuzo nezimpendulo ezingu-100 ze-Anubis Chain, okusemthethweni, Julayi 2026, Q57

Ngilahlekelwe amagama okuvuselela (seed phrase). Ukhona ongabuyisa isikhwama sami?

Cha. Amagama okuvuselela esikhwama ozigcinela sona yiwona kuphela ukhiye. Akekho ongawasetha kabusha: hhayi i-Anubis Chain, hhayi umenzi wesikhwama, hhayi umuntu wosizo. Uma isikhwama sisavuleka, senzele isipele manje, wakhe isikhwama esisha, udlulisele izimpahla kuso, uhoxise izimvume ezingadingeki, bese ugcina amagama amasha ngaphandle kwe-inthanethi.

Noma ubani othi angakubuyisela amagama okuvuselela ngenkokhelo uwukulahlekelwa kwesibili okulindile.

Umthombo: Imibuzo nezimpendulo ezingu-100 ze-Anubis Chain, okusemthethweni, Julayi 2026, Q50

Ngithumele ekhelini elingalungile. Kungabuyiselwa emuva yini?

Ukuthengiselana okusekuvunyiwe akunakubuyiselwa emuva yinoma ubani. Uma ulawula lelo kheli, lingenise, ushintshele kunethiwekhi efanele bese ubuyisela izimpahla. Uma lingelenkundla yokushintshana noma lomunye umuntu, yibo kuphela abangasiza. Uma kungekho ophethe ukhiye, izimpahla zilahlekile. Iphrojekthi ayikwazi ukuguqula iketango.

Umthombo: Imibuzo nezimpendulo ezingu-100 ze-Anubis Chain, okusemthethweni, Julayi 2026, Q59, Q60 ne-Q81

Ukuthengiselana kwami sekuyisikhathi eside kulindile.

Hlola i-hash ku-browser.anubispace.org, bese uhlola ngokulandelana: isikhwama siku-chain ID 6714; ibhalansi yanele inani kanye ne-gas; akukho kuthengiselana kwangaphambili okuvela ekhelini elifanayo okusalindile, ngoba ukuthengiselana kwenziwa ngokulandelana kwe-nonce; uma isikhwama sinikeza okuthi Sheshisa (Speed Up) noma Khansela (Cancel), kusebenzise ngaphambi kokuba ukuthengiselana kungene. Ungaphindi uthumele nge-nonce entsha, kungenzeka ukhokhe kabili.

Umthombo: Imibuzo nezimpendulo ezingu-100 ze-Anubis Chain, okusemthethweni, Julayi 2026, Q62

Ngiyihlukanisa kanjani inkontileka esemthethweni nethokheni lomgunyathi?

Ngena ngeziteshi ezisemthethweni kuphela, ungalokothi ungene ngesikhangiso sosesho noma ngomlayezo. Qhathanisa ikheli lenkontileka eliphelele nelishicilelwe ngokusemthethweni: igama, uphawu noma ilogo okufanayo akufakazeli lutho. Ku-explorer, hlola ukuthi inethiwekhi ingu-6714 bese uqhathanisa ikheli, uphawu, amadesimali negama. Ikhodi yomthombo ehloliwe isiza ekubuyekezeni; ayifakazeli ukuthi iqembu lingobani. Bese uhlola ngenani elincane.

Umthombo: Imibuzo nezimpendulo ezingu-100 ze-Anubis Chain, okusemthethweni, Julayi 2026, Q80

Isikhwama sami sibala amanethiwekhi amaningana abizwa ngokuthi yi-Anubis. Iyiphi efanele?

Leyo ene-chain ID 6714. Amanethiwekhi angaba negama elifanayo kodwa angabi yiketango elifanayo. Faka imingcele ngesandla: igama Anubis, RPC https://rpc.anubispace.org, i-chain ID 6714, uphawu DAI, i-explorer https://browser.anubispace.org. Uma i-RPC ingalondolozeki, ungakhethi i-'Anubis' ohlwini lokusesha lwesikhwama; lungisa i-RPC bese uzama futhi.

Umthombo: Inothi losizo le-Anubis Chain eliphiniwe eqenjini labagqugquzeli, Septhemba 2026

Ukuthengiselana okukodwa kubiza malini?

Ukudlulisa okujwayelekile kulinganiselwa cishe ku-0.000252 DAI, njengoba kusho Imibuzo Evame Ukubuzwa (FAQ); ukudluliswa kwamathokheni, ama-swap nokubiza izinkontileka kusebenzisa okwengeziwe. Isikhwama sikhombisa inkokhelo ngaphambi kokuba usayine. Ukuthengiselana okwehlulekile kusasebenzisa i-gas yengxenye eyenziwe; okungazange kusakazwe akubizi lutho.

Umthombo: Imibuzo nezimpendulo ezingu-100 ze-Anubis Chain, okusemthethweni, Julayi 2026, Q54 kuya ku-Q56

Ayini amakheli ezinkontileka ze-RM ne-GD?

RM: 0x2e045e1380f5f5b6e7550328910a7377c9fce59d. GD: 0x21b6b0b3fab224921d3054d187e324a673411b4c. Womabili aku-Anubis Chain (6714). I-explorer iwafunda njenge-Rome (RM), amadesimali angu-9, ne-Gladiator (GD), amadesimali angu-18, isamba esikhona esingu-390,000. Njengoba kuthunyelwe yithimba losizo le-Anubis Chain ngomhla ka-13 Septhemba 2026 futhi kwaqhathaniswa ne-browser.anubispace.org ngomhla ka-24 Septhemba 2026.

Ngenisa kokubili; kuyizinkontileka ezihlukene. Qhathanisa izinhlamvu ezine zokuqala nezine zokugcina nesigaba esithi Imigomo yanamuhla, bese uhlola igama isikhwama esilifunda emuva. I-USDT ebophelwe entengweni ingu-0xDfb6a28BC6DC51fed17c27C880F2c66cDd040A3e kanti i-DAI ingu-0x83fd06F0846d9D90B3016bF670Efe2E0B11cDe14. Uma ingxoxo ikhombisa ikheli elihlukile, ingxoxo inephutha.

Umthombo: Ithimba losizo le-Anubis Chain, 13 Septhemba 2026; browser.anubispace.org, 24 Septhemba 2026

Liyini ikheli le-dApp ye-Spartan OS, futhi yini ekuyo?

spartanar.org. Amakhasi: Dashboard (Data Analysis), Flexible Stake, i-staking yesikhathi eside yezinsuku ezingu-180, 360 no-540, Long-Term Liquidity Bond, RM Stability Vault, Charge Incentive Pool, My Invite, Spider Web Rewards (imali engenayo yamazinga), DAO (isikhundla), Turbine, Energy, Genesis Cornerstone, DAO Vote ne-Trading Center (i-swap). Ingxenye engezansi ixhumanisa ku-home.spartanar.org naku-x.com/Spartan_Arena_ futhi ikhombisa ibheji ye-CertiK.

Lithayiphe, noma ulivule ngesixhumanisi sokumema somholi wakho okokuqala ukuze i-dApp ibophe ommemile. Idesibhodi iyona okubhekiselwa kuyo kuwo wonke amazinga nemikhawulo; ikhasi le-DAO libuyekezwa nge-rebase ngayinye, hhayi ngesikhathi sangempela. Ungalokothi uxhume isikhwama kudomeyini elingisayo.

Umthombo: spartanar.org, kufundwe ngomhla ka-24 Septhemba 2026

Isikhwama sami sithole inethiwekhi ebizwa ngokuthi yi-Anubis. Ingabe yiyona efanele?

Kuphela uma i-chain ID ingu-6714. Umyalelo kaHarry kwilungu elinokudlulisa nge-bridge okubambekile, 21 Septhemba: hlola izilungiselelo zenethiwekhi ngesandla uziqhathanise nemingcele esemthethweni ye-mainnet, futhi ungathembeli egameni elikhonjiswa esikhwameni. Igama lenethiwekhi Anubis, RPC rpc.anubispace.org, i-chain ID 6714, uphawu lwemali DAI, i-explorer browser.anubispace.org. Amanethiwekhi angaba negama elifanayo kodwa abe ngamaketango ahlukene; i-chain ID iyona eyisihlonzi.

Uma i-RPC ingakwazi ukwengezwa, ungakhethi okuthi 'Anubis' ekusesheni kwamanethiwekhi kwesikhwama uqobo. Yengeze ngesandla usebenzisa imingcele engenhla, uyithayiphe, bese uhlola ukuthi ingu-6714 ngaphambi kwanoma yikuphi ukuthengiselana.

Umthombo: Harry, ingxoxo yokusebenza, 21 Septhemba 2026; imingcele njengoba ishicilelwe yi-akhawunti yesevisi ye-Spartan OS

I-swap ye-GaleBridge sekuyisikhathi eside ilindile. Ngenzeni manje?

Vala umsebenzi olindile bese uphuma ku-GaleBridge. Vula isikhwama uhlole ukuthi impahla isekhona yini, bese uvula umlando wokuthengiselana uhlole ukuthi ingabe kukhona okwathunyelwa ngempela futhi kwaqedwa on-chain. Uma impahla ingathintekile futhi akukho kuthengiselana okuphumayo okuphumelele, umsebenzi awuzange uqedwe: phinda uxhume isikhwama ku-GaleBridge bese uzama futhi. Ezimweni ezijwayelekile ukudlulisa kuqedwa phakathi kwemizuzwana.

Ukushintsha ifoni akusizi uma isimo sokulinda singesokuthengiselana noma sesikhathi sokusebenza sesikhwama. Ngaphambi kokuphinda uzame, hlola ukuthi isikhwama siku-chain ID 6714. Izinyathelo zikaHarry zangomhla ka-21 Septhemba 2026, ngokulandelana; okuqoshiwe kwezifundo kukhombisa izikrini ze-bridge.

Umthombo: Harry, ingxoxo yokusebenza, 21 Septhemba 2026

Ukuphepha

Imithetho evimbela ukulahlekelwa. Yisho ngaphambi, hhayi ngemva.

Iyini imithetho yokuphepha yomsebenzisi ngamunye?

Thayipha amakheli, ungawachofozi: izixhumanisi zivela ku-anubischain.ai noma kuma-akhawunti amathathu asemthethweni e-X kuphela. Hlola izinhlamvu ezine zokuqala nezine zokugcina zalo lonke ikheli lenkontileka nelomamukeli. Hlola yonke indlela entsha ngenani elincane. Funda yonke imiyalezo yesikhwama. Gcina amagama okuvuselela ngaphandle kwe-inthanethi. Hlola ukuthi i-chain ID ingu-6714. Sho ukuthi buyini ubungozi ngaphambi, hhayi ngemva.

Ayikho i-akhawunti esemthethweni eyoke icele amagama okuvuselela. Ikheli elisengxoxweni, ku-DM, esithombeni-skrini noma emlayezweni odluliselwe alisemthethweni, noma ngabe lithunyelwe ngubani.

Umthombo: Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Ingxenye V

Ikheli noma isixhumanisi kusemthethweni nini?

Uma kuvela ku-anubischain.ai noma ku-x.com/AnubisChainL1 (i-akhawunti eyinhloko ye-Anubis Chain kusukela ngomhla ka-16 Septhemba 2026), x.com/ANUBISCHAIN_, x.com/Spartan_Arena_ noma x.com/Anubis_Labs. Akukho kwenye indawo. Umphakathi we-Telegram nomtapo wezinsiza kwenzelwe izingxoxo namafayela, akusoze kwenzelwa amakheli.

Umthombo: Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Ingxenye III

Buyini ubungozi? Busho ngokucacile.

I-Anubis Chain iyinethiwekhi entsha enomlando omfushane. Ama-bridge ayingxenye ehlaselwa kakhulu embonini, futhi yonke impahla idlula kwelinye lawo. Amathokheni anesamba esincane ne-liquidity encane anyakaza kakhulu. I-RM inentela yokuthengisa ekhuphuka njengoba intengo yehla, ngakho ukuphuma ngesikhathi sokwehla kubiza kakhulu ngamabomu. I-TempleRaid ingumdlalo wenhlanhla. Amasistimu amathathu kwamahlanu e-Spartan OS awakabi bikho. Izinto zohlelo lwendlela zingase zibambezeleke.

Akukho kulokho okungavamile kuphrojekthi esesigabeni esinje. Konke kufanele kushiwo ngokuzwakalayo yinoma ubani owethula iphrojekthi kumuntu ongakaze ezwe ngayo. Okulapha akusona iseluleko sezezimali, futhi asikho isibalo esiyisithembiso senzuzo.

Umthombo: Incazelo ebanzi, Septhemba 2026, Ingxenye VII; Idokhumenti yomholi, Septhemba 2026, Ingxenye VII

Kukhona yini okuqinisekile kulokhu?

Cha. Imikhawulo, amazinga aguququkayo, isidingo samandla nentela encike entengweni konke kusho ukuthi imiphumela incike ezimeni nasekuziphatheni. Izinga ngalinye linomkhawulo walo nosuku lwalo, futhi wonke amazinga ayashintsha.

Umthombo: Idokhumenti yomholi, Septhemba 2026, Ingxenye VII

Kufanele ngiziveze kanjani izibalo?

Qala ngomkhawulo. Sho ibhandi, hhayi okuphezulu. Chaza i-turbine ngaphambi kwemiklomelo. Sho okungakashicilelwa. Gcina izinsiza zomphakathi zihlukene nemigomo yohlelo. Sho ukuthi buyini ubungozi.

Njalo nomkhawulo, njalo nosuku, hhayi neze njengesithembiso. Izinga elingenamkhawulo liyindaba; izinga elinomkhawulo liyinkontileka. Yethula amafayela njengoba ekhishiwe, uhumushe ngemvume, ungalokothi uhlele inombolo.

Umthombo: Idokhumenti yomholi, Septhemba 2026, Ingxenye VII

Zikhona yini izexwayiso zokuphepha zamanje?

Zimbili, zangoSepthemba 2026. I-Anubis Chain ayikaze ishicilele uhlelo lokusebenza lwezokuxhumana kunoma yisiphi isitolo sezinhlelo; uhlelo olubizwa ngokuthi 'Anubischat' alusemthethweni futhi akufanele lufakwe noma luxhunywe esikhwameni (19 Septhemba). I-CertiK ne-Anubis Chain zixwayisa ukuthi ikhodi eyingozi exhunyaniswe ne-FomoPeek ingapakishwa kabusha ezinhlelweni ze-iOS bese ifunda okhiye, amagama okuvuselela nezingxoxo: buyekeza uye ku-iOS 26.7, gwema izinhlelo ezivela emithonjeni engaziwa, ungalokothi uthayiphe amagama okuvuselela ohlelweni olungekho emthethweni (20 Septhemba).

Dlulisela zombili izaziso ziphelele. Umgqugquzeli osakaza isexwayiso sokuphepha kusenesikhathi wenzele iqembu okuningi kunalowo osakaza ishadi lentengo.

Umthombo: Isimemezelo esishicilelwe kabusha ku-SpartanOS Resource Library, 19 no-20 Septhemba 2026

Yimaphi ama-akhawunti neziteshi ezisemthethweni?

I-akhawunti eyinhloko ye-X ye-Anubis Chain kusukela ngomhla ka-16 Septhemba 2026 ngu-@AnubisChainL1; i-@ANUBISCHAIN_ endala inezimemezelo zangaphambili. Anubis Labs: @Anubis_Labs. Spartan OS: @Spartan_Arena_. Iwebhusayithi: anubischain.ai. Umtapo wezinsiza wesiNgisi ku-Telegram: t.me/SpartanOSLibrary. I-dApp ye-Spartan OS: spartanar.org, ingxenye yayo engezansi ixhumanisa ku-x.com/Spartan_Arena_ naku-home.spartanar.org.

Okunye konke kuyingxoxo nje. Amakheli nezixhumanisi kuthathwa kule mithombo, hhayi neze engxoxweni, noma ngabe umthumeli ubonakala esesikhundleni esiphezulu kangakanani.

Umthombo: Isimemezelo esishicilelwe kabusha ku-SpartanOS Resource Library, 16 Septhemba 2026; SpartanOS Resource Library (t.me/SpartanOSLibrary)

Ingabe 'ukubusa komphakathi' kusho ukuthi amalungu awavunyelwe ukuthengisa?

Cha, futhi iphrojekthi ikusho lokho ngokusobala. Izimpahla ze-on-chain zingezabanikazi bazo futhi wonke umhlanganyeli unelungelo lokuzenzela izinqumo zakhe. Imikhuba yomphakathi ingukuzibusa: inkululeko yokukhetha kanye nokuqonda ukuthi ukukhetha kuyithinta kanjani imakethe ehlanganyelwayo. Iphrothokholi ayinqumeli abasebenzisi futhi umphakathi awunqumeli abasebenzisi; umphakathi ovuthiwe usiza abantu ukuthi baqonde imakethe ukuze benze izinqumo ezinhle.

Uma ilungu litshelwe, noma kuphi, ukuthi ukuthengisa akuvunyelwe noma ukuthi umholi angabamba izimpahla zalo, kulungise khona lapho bese ukhomba le mpendulo. Inkulumo yephrojekthi: ukusabalaliswa kwamandla kweqiniso akufanele kusho ukungabikho kokuhleleka, futhi inkululeko akufanele isho ukungabikho komthwalo wemfanelo.

Umthombo: Harry (Spartan OS), 'Kusukela ekululameni okumise okuka-U kuya emkhakheni womhlaba wonke', okwadluliselwa esiteshini se-Phalanx ngomhla ka-26 Septhemba 2026, kwaphinde kwashicilelwa kuphelele esigabeni esithi Okusemthethweni

Ukuhlola

Lapho ungahlola khona isibalo ngasinye ngokwakho, nalokho okushiwo kuphela.

Ngingazihlola kuphi izibalo ngokwami?

I-chain ID neyunithi yenkokhelo: chainlist.org/chain/6714. Noma yikuphi ukuthengiselana, inkontileka noma ikheli: browser.anubispace.org. Izinkontileka ze-bridge: etherscan.io, bscscan.com, polygonscan.com. Ukuhlolwa: skynet.certik.com. Imininingwane yemakethe ye-RM: geckoterminal.com, dextools.io. Izimemezelo ezisemthethweni: anubischain.ai nama-akhawunti amathathu e-X.

Umthombo: Incazelo ebanzi, Septhemba 2026, Ingxenye VII

Yini ehloliwe, futhi yini eshiwo yiphrojekthi kuphela?

Okungahlolwa namuhla: i-chain ID 6714 ne-gasDAI, ukuhambisana ne-EVM, izinkontileka ze-bridge emaketangweni omthombo amathathu, ukuhlolwa kwe-GaleBridge, i-RocketSwap ku-CertiK Skynet, imizuliswano ye-TempleRaid nokuhweba kwe-RM ku-explorer. Okushiwo yiphrojekthi: izibalo zesithombe-simo (snapshot) se-Origin, abasebenzisi abangu-16 wezigidi, izibalo zombiko wedatha ezingaphezu kwalokho okuku-explorer, isibophezelo sika-$300 wezigidi, izinkontileka ezingu-137 nokuthunyelwa kokuhlolwa, wonke amazinga nezibalo zedeshibhodi, abasebenzisi be-DeBox abangu-26 wezigidi, nazo zonke izinto zohlelo lwendlela ezingenalo usuku.

Uhlu lwesibili luwuhlu lwalokho okushiwoyo, kwethulwa njengoba iphrojekthi ikusho, ngoba bekungakwazi ukuhlolwa ngomthombo ozimele. Umgqugquzeli obuzwa nganoma yikuphi kwakho kufanele asho khona lokho ngqo.

Umthombo: Incazelo ebanzi, Septhemba 2026, Ingxenye VII

Ingabe kukhona okuke kwahlolwa?

I-GaleBridge yahlolwa yi-CertiK ngo-Okthoba 2025: okutholakele okuthathu, akukho okubucayi, umbiko uku-skynet.certik.com. I-RocketSwap ibhaliwe ku-CertiK Skynet. I-Anubis Chain yamemezela ukuhlolwa kwe-CertiK ne-Armor kwezinkontileka eziyinhloko ezingu-137 ngomhla ka-13 Julayi 2026. I-Anubis Labs yamemezela ngomhla ka-2 Agasti 2026 ukuthi i-Spartan OS iqedile ukuhlolwa kwayo kwe-CertiK: akukho okubucayi, akukho okukhulu, okutholakele okuthathu okuphakathi nendawo kuxazululiwe.

Cela izixhumanisi zombiko ku-skynet.certik.com ngaphambi kokuphinda umphumela kumuntu ongabazayo; isimemezelo yizwi lephrojekthi, umbiko ngowe-CertiK.

Umthombo: Incazelo ebanzi, Septhemba 2026, Ingxenye II; Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Ingxenye III; izimemezelo zangomhla ka-13 Julayi no-2 Agasti 2026

Siyini isikhathi sebhulokhi? Ngibone izinombolo ezahlukene.

Izethulo zithi amamilisekhondi angu-450; umbiko wedatha kaSepthemba 2026 uthi cishe umzuzwana owodwa; imibhalo yezobuchwepheshe yenethiwekhi ichaza umgomo wemizuzwana emibili; amakhasi e-docs.anubispace.org athi imizuzwana engu-0.45. Isibalo samanje sisesigabeni se-explorer esikhombisa amabhulokhi akamuva. Sho noma yisiphi ongasikhombisa, futhi usho ukuthi sivelaphi.

Umthombo: Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Ingxenye I

Ngenzenjani uma leli khasi lingakwazi ukuphendula umbuzo?

Cindezela 'Umbuzo ongaphendulwanga' ngaphansi komsizi, noma inkinobho yokuphawula ezansi kwesikrini, bhala umbuzo njengoba ubuzwe, bese ucindezela okuthi Thumela: i-Telegram ivuleka nenothi selilungele iqembu le-Phalanx. Inguqulo elandelayo izoba nempendulo. Kuze kube yilapho, sho ukuthi uzothola, kunokuba uqagele.

Umgqugquzeli othi 'Angazi, ngizohlola' ugcina abantu abaningi kunalowo oqamba inombolo.

Umthombo: Leli khasi

Yimuphi umbuzo ofanele wokuhlolisisa ongawubuza nge-Spartan OS?

Iphrojekthi iyawuhlongoza: ngeyunithi ngayinye yemali eyinhloko engena ku-Spartan OS, yiziphi izimpahla zephrothokholi ezakhiwayo noma ezitholwayo, yisiphi isamba se-RM esihambisana nazo noma isikweletu sethokheni sesikhathi esizayo esidalwayo, leyo RM ikhululelwa kanjani ekusakazekeni, futhi yiziphi izindlela ezikhona zokulinganisa leso samba nesidingo sangempela semakethe ne-liquidity?

Nalapho ungabheka khona impendulo: ukukhishwa kwe-RM okusele, amanani okuthenga kabusha nokushisa, i-POL nokujula kwe-liquidity, ukuhlala kwabasebenzisi, nokuthi isistimu yenze kanjani ngaphansi kwengcindezi yemakethe. I-explorer, ideshibhodi nekhasi le-Charge Incentive Pool kunezibalo eziningi zalezi; ukwehla nokululama kwangomhla ka-13 Septhemba yisona kuphela isigameko sengcindezi esirekhodiwe kuze kube manje.

Umthombo: Isitatimende sokuthi imali engena kuphrothokholi iphathwa kanjani, esatholwa ngomhla ka-24 Septhemba 2026, siphinde sashicilelwa esigabeni esithi Okusemthethweni

Yikuphi ukugeleza kwemali okudlula ku-Spartan OS, futhi yini efika kubanikazi?

I-Spartan OS ihlukanisa izinto ezintathu umgqugquzeli ajwayele ukuzihlanganisa: ukugeleza kwemali eyinhloko, ukunqwabelana kwephrothokholi nokunqwabelana kwenani kubanikazi. Imali eyinhloko engena emkhiqizweni ilandela indlela yempahla yalowo mkhiqizo (LP, i-treasury, i-POL, eminye imisebenzi yephrothokholi), futhi ukwahlukaniswa okuqondene nomkhiqizo othile akufanele kwethulwe njengephesenti lemali engenayo elisebenza yonke indawo. I-treasury ne-liquidity kungukunqwabelana kwephrothokholi, hhayi imali engenayo yabanikazi. Ngezimpawu zephrojekthi uqobo: i-treasury ≠ isabelo sabanikazi; i-liquidity ≠ isabelo sabanikazi; ukukhuphuka kwentengo ≠ ukwabiwa kokugeleza kwemali.

Inani labanikazi lichazwa njengelingaqondile namuhla: ku-RM ngesidingo sokuthenga se-Turbo, ukukhiya, izinguquko esambeni esisakazekile, ukushisa, ukusetshenziswa kwezinhlelo zokusebenza, nokuthenga kabusha nokushisa okuxhumene nemali engenayo lapho kusebenza khona; ku-GD ngesamba esinqunyiwe esingu-390,000, amalungelo okubusa nokusetshenziswa kwezinhlelo zokusebenza. Isendlalelo esilandelayo yimali engenayo evela ezinhlelweni zokusebenza zangaphandle ezifana ne-GoPlay, i-TempleRaid nalokho okulandelayo, engalandelelwa iye ku-treasury, ku-liquidity, ekuthengeni kabusha nasekushiseni, noma ekwabiweni okucacile. Ngaphandle uma inkontileka noma umthetho wephrothokholi obhaliwe uthi u-X% wemali engenayo uya kubanikazi be-RM noma be-GD, ungasho ukuthi kunjalo. Ukugeleza kwemali eyinhloko ≠ imali engenayo; izimpahla zephrothokholi ≠ isabelo sabanikazi; ukuthenga kabusha nokushisa ≠ ukwabiwa kwemali okuqondile.

Umthombo: Impendulo emibuzweni eyisikhombisa yokuhlolisisa, eyatholwa ngomhla ka-24 Septhemba 2026, iphinde yashicilelwa esigabeni esithi Ukuhlolisisa

Yini ehlolwa on-chain, futhi yini eshiwo off-chain kuphela?

Okuse-on-chain futhi okungahlolwa yinoma ubani: amakheli ezikhwama, izinkontileka zamathokheni, ukudluliswa kwe-RM ne-GD, ama-swap, izinguquko ze-liquidity, ukushisa, ukusebenzisana nezinkontileka, ama-hash okuthengiselana nokuxazululwa kokugcina. Okuse-off-chain futhi okufanele kuphathwe ngokwehlukile: izingxenye zokubalwa kwamaphuzu e-AICS, ukuchazwa kwenhloso, ukuhlaziywa kwedatha yangaphandle, ukubizwa kwe-API nezinqumo zomenzeli. Umthetho we-Spartan OS uqobo: umphumela ose-on-chain awusho ukuthi lonke ukubala bekuse-on-chain.

Umngcele wokwethemba njengoba iphrojekthi iwudweba: i-AI nengqalasizinda ye-off-chain kuphatha ubuhlakani, ukuhlaziya nengqondo yokwenza; iketango lihlola isimo, izimpahla, ukuthengiselana nokuxazululwa. Ukwenza ukubala kwe-off-chain ngokwako kuhloleke kungadinga ama-algorithm asobala, ama-oracle, ama-TEE, ubufakazi be-ZK, amasiginesha noma amanethiwekhi abahloli, kuye ngokuthi kwenziwa kanjani, futhi akukho kulokho okushiwo ukuthi sekusebenza. Ngakho uma othile ebuza ukuthi amaphuzu e-AICS ase-on-chain yini, impendulo ithi ukuthengiselana akuholela kukho kuse-on-chain, kanti ukubalwa kwamaphuzu akwethulwa njengokuhlolwe on-chain.

Umthombo: Impendulo emibuzweni eyisikhombisa yokuhlolisisa, eyatholwa ngomhla ka-24 Septhemba 2026, iphinde yashicilelwa esigabeni esithi Ukuhlolisisa

I-Spartan OS ifakazela kanjani ukuthi umenzeli we-AI wenze lokho akushoyo?

Izigaba ezimbili zobufakazi, zihlukaniswe. Umphumela wokwenza: i-hash yokuthengiselana, inkontileka ebiziwe, okuphume esikhwameni, okufikile nokuthi kuxazululiwe yini, konke kufundeka ku-explorer ngaphandle kokuthemba umlayezo othi 'Kuqediwe'. Ukubala: ukuthi kungani umenzeli enqume kanjalo, ukuthi okokufaka kwakhe bekulungile yini nokuthi isinyathelo ngasinye sokucabanga besilungile yini. Iketango lifakazela okokuqala. Alikufakazeli okwesibili, futhi i-Spartan OS iyakusho lokho.

Ukuhlolwa ngokubethela (cryptographic) kokubala kwangaphakathi komenzeli kungadinga ama-TEE, ubufakazi be-ZK, ama-oracle, amanethiwekhi abahloli noma amasiginesha, futhi kufanele kwahlulelwe ngobuchwepheshe bokuhlola obusebenza ngempela. Umthetho okufanele uwudlulisele: ungalokothi uthembele kumenzeli othi uqedile; hlola ukuthi iketango likhombisa ukuthi uqedile. Ingqalasizinda yenhloso efana ne-dappOS yenzelwe ukusindisa umsebenzisi ezinyathelweni zesandla, kanti umphumela wempahla usabuyela ekuxazululweni kwe-on-chain.

Umthombo: Impendulo emibuzweni eyisikhombisa yokuhlolisisa, eyatholwa ngomhla ka-24 Septhemba 2026, iphinde yashicilelwa esigabeni esithi Ukuhlolisisa

Ingabe '35M kuya ku-50M' kungumgomo noma kuyisithembiso?

Kungumgomo wentuthuko, ngamazwi ephrojekthi: 'lezi zinombolo zimele imigomo yentuthuko, akuzona iziqinisekiso zenzuzo noma zezintengo ze-RM zesikhathi esizayo.' Ukulandelana ekunikezayo ngu-35M, 36M, 50M, bese kuba umkhakha omkhulu womhlaba wonke, futhi yengeza ngokuthi intengo ye-RM izoqhubeka nokunqunywa ukuhlinzekwa nesidingo, izimo ze-liquidity nokuthuthukiswa komkhakha.

Cashunisa isexwayiso kanye nenombolo njalo. I-35 wezigidi uqobo yisisekelo semali eyinhloko esiphelele esishiwo yiphrojekthi ngomhla ka-26 Septhemba 2026; izibalo zedeshibhodi ezisesigabeni esithi Imigomo yanamuhla yilezo umfundi angaziqhathanisa nazo.

Umthombo: Harry (Spartan OS), 'Kusukela ekululameni okumise okuka-U kuya emkhakheni womhlaba wonke', okwadluliselwa esiteshini se-Phalanx ngomhla ka-26 Septhemba 2026, kwaphinde kwashicilelwa kuphelele esigabeni esithi Okusemthethweni

Yimaphi amakheli ezinkontileka i-Spartan OS ewashicilele, futhi ingabe ayaphumelela lapho ehlolwa?

Amakheli angamashumi amabili nanye, ashicilelwe ama-akhawunti esevisi yephrojekthi ngomhla ka-25 no-26 Septhemba 2026: RM, GD, USDT ne-DAI; i-treasury; i-staking eguquguqukayo, neyezinsuku ezingu-180, 360 no-540; amabhondi e-liquidity ezinsuku ezingu-180, 360 no-540; amabhondi amathathu esikhathi eside anenzalo enqunyiwe; izinkontileka zokushisa, zemiklomelo yomphakathi, ze-Turbo, zamaphuzu omsebenzi nezesikhwama sokuzinza; kanye ne-pool yezikhuthazo zokushaja. Kuhlolwe ku-browser.anubispace.org ngomhla ka-26 Septhemba: angamashumi amabili ayizinkontileka ezinomlando wokuthengiselana osebenzayo (inkontileka ye-Turbo yodwa ingaphezu kwesigidi sokuthengiselana). Ikheli le-pool yezikhuthazo zokushaja alisiyo inkontileka ku-explorer: liyikheli elivamile elingenakho ukuthengiselana kwalo. Lithathe njengelingakafakazelwa futhi ungathumeli lutho kulo.

Ikhodi yomthombo ihloliwe ku-explorer ezinkontilekeni zamathokheni e-USDT ne-DAI kuphela; i-RM, i-GD nezinkontileka zemikhiqizo zifakiwe eketangweni kodwa ikhodi yazo yomthombo ayishicilelwe ukuze ifundwe. Kusho lokho uma ubuzwa: i-bytecode nakho konke ukuthengiselana kusobala, ikhodi efundekayo ayisobala, futhi iphrojekthi ingakushintsha lokho ngokuhlolisa izinkontileka. Ithebula eliphelele elinezibalo lisesigabeni esithi Imigomo yanamuhla.

Umthombo: Ama-akhawunti esevisi ye-Spartan OS, uhlu lwezinkontileka lwangomhla ka-25 no-26 Septhemba 2026, kuhlolwe ku-browser.anubispace.org ngomhla ka-26 Septhemba; ithebula elisesigabeni esithi Imigomo yanamuhla

Ukuqhathanisa

I-Anubis iqhathaniswa namanye amaketango. I-Spartan OS iqhathaniswa nezinye izinhlelo.

Yini eyenza i-Anubis Chain ihluke kwamanye amaketango?

Izinkokhelo ngeyunithi ebophelwe kudola esikhundleni sethokheni le-gas elishintshashintshayo. I-mempool ebethelwe evimbela ukwandulelwa (front-running) ngokwakheka kwayo. Ubumfihlo ngokukhetha ngobufakazi obungadaluli lutho (zero-knowledge), kanti iphrothokholi ihlala ihloleka. Amabhulokhi okugcina angenakuhlelwa kabusha. Ukuhambisana okuphelele ne-Ethereum, ngakho akukho okubhalwa kabusha. Futhi isisekelo esingumnikazi weketango nesixhasa okusebenza kulo.

Ngakunye kwalokhu kuchazwa yi-Anubis emibhalweni yayo; okushiwo nge-mempool nobumfihlo kuvela emibhalweni ye-Anubis Network, iyunithi yenkokhelo ne-chain ID kungahlolwa ku-chainlist.org. Amathebula amabili kuleli khasi: elethu, eliqhathanisa neketango elijwayelekile le-EVM, nokuqhathanisa kwamaphuzu ayisishiyagalombili kwe-Anubis Chain uqobo okuvela esithombeni-lwazi sikaJulayi 2026.

Umthombo: Umhlahlandlela wezobuchwepheshe, Septhemba 2026, Ingxenye II; Incazelo ebanzi, Septhemba 2026, Ingxenye II

Yini eyenza i-Spartan OS ihluke kwezinye izinhlelo zesitayela se-Olympus?

Imali eyinhloko ikhululwa ngezingxenye zansuku zonke kusukela ngosuku lokuqala esikhundleni sokubanjwa kuze kuphele isikhathi. Yonke iphozishini yesikhathi eside inomkhawulo onqunywe ngo-USDT lapho ungena, iyakhokha ize ifinyelele kuwo, futhi imali eyinhloko ibalwa ngaphakathi kwalowo mkhawulo (kwafakazelwa ngomhla ka-26 Septhemba 2026). Imilenze emibili inikeza isikhundla, hhayi emithathu. Yonke inkokhelo idlula ku-turbine bese iba ukuthenga. Intela yokuthengisa ekhuphuka njengoba intengo yehla inciphisa ukuwa okulandelanayo. Amaphuzu akhokhela umholi okhuthele ngaphezu kongakhuthele. Futhi isebenza eketangweni eliphethwe yisisekelo esifanayo.

Njengoba kushiwo yi-Spartan OS emihlanganweni yokwazisa yangomhla ka-7 no-14 Septhemba 2026. I-Origin yayidinga amaqembu amathathu angu-$50,000; lapha i-V1 ingu-$500, abantu abathathu namaqembu amabili angu-$10,000.

Umthombo: Isethulo sabagqugquzeli v14.2, 17 Septhemba 2026, amaslayidi 7, 10, 11, 12; Idokhumenti yomholi, Septhemba 2026

Yibuphi ubuchule obusha be-Anubis ne-Spartan OS?

Eketangweni: i-gas ebophelwe kudola, i-mempool ebethelwe, ubumfihlo obukhethwayo nokuthengiselana okungadingi i-gas ngomkhokheli (paymaster), njengoba kuchazwe emibhalweni ye-Anubis. Ku-Spartan OS: O², iphrothokholi yokulinganisa ezivumelanisayo eshintsha imithetho ngokuya ngemakethe; i-Token Router, enikeza umenzeli we-AI ithokheni lakhe futhi ixazulule imali yakhe engenayo on-chain; nohlelo lapho inzuzo uqobo iyingcindezi yokuthenga.

I-Spartan OS ibeka i-O² njengokokuqala emhlabeni. I-Token Router imenyezelwe kodwa ayikashicilelwa ngokuphelele. Chaza lokho okumenyezelwe bese ume lapho.

Umthombo: Incazelo ebanzi, Septhemba 2026, Izingxenye II kuya ku-IV; Isethulo sencazelo eyinhloko ye-O², Spartan OS, Septhemba 2026; Imibhalo ye-Anubis Chain (docs.anubispace.org)

Siyini isivikelo (moat) se-Spartan OS, uma amathokheni nezinkontileka kungakopishwa?

Izendlalelo ezinhlanu ndawonye, ngokwencazelo yephrojekthi uqobo, futhi asikho esanele sisodwa: isendlalelo somnotho (RM, GD, O², i-Turbo ye-1:1, AICS, i-Stable Vault, i-staking yesikhathi eside namabhondi, amandla, ukushisa, ukunqwabelana kwenzalo); isendlalelo sezinhlelo zokusebenza (GoPlay, TempleRaid nalokho okulandelayo); isendlalelo se-AI, senhloso nesokwenza (ingqalasizinda yesitayela se-dappOS eguqula inhloso ibe ukuqondisa nokwenza kanti ukuxazululwa kubuyela eketangweni); ingqalasizinda yeketango (Anubis Chain enezikhwama, ama-bridge, ama-DEX, ama-explorer, ukwenziwa kwezinkomba nezinhlelo zokuwela amaketango ezifana ne-The Graph, Blockscout ne-LayerZero); nokwandiswa komkhakha.

Uhlelo lwendlela kusukela ku-Q3: ingqalasizinda yokuwela amaketango ye-LayerZero ne-OFT, ukuthuthukiswa kwe-explorer, i-RocketSwap V3, i-Guard multisig, i-NFT ne-DID, i-AI Meme ne-AI Agent, ukwenza izimpahla zangempela zibe amathokheni (RWA), inkundla yokuhweba ngezinkontileka engalawulwa yisikhungo esisodwa, nomshwalense wokuhweba ngezinkontileka. I-Spartan OS ngokwayo ithi akukho kulokhu okungethulwa njengemikhiqizo esebenzayo ekhiqiza imali engenayo: imikhiqizo esebenzayo yahlulelwa ngokusetshenziswa nangedatha ye-on-chain, ukuhlanganiswa ngenqubekela phambili yezobuchwepheshe nangezimemezelo ezisemthethweni, imikhiqizo yesikhathi esizayo uma isifakiwe. Ithi kusesekuseni ukuchaza isivikelo sayo njengesingenakukopishwa; isivikelo senethiwekhi, okufanele siboniswe ngokujula kwe-liquidity, abasebenzisi abakhuthele, ukwamukelwa, umsebenzi wonjiniyela, imali engenayo yangaphandle nokuhlanganiswa.

Umthombo: Impendulo emibuzweni eyisikhombisa yokuhlolisisa, eyatholwa ngomhla ka-24 Septhemba 2026, iphinde yashicilelwa esigabeni esithi Ukuhlolisisa

Ibhondi lezinsuku ezingu-540 ne-staking yesikhathi eside yezinsuku ezingu-540: uyini umehluko?

Kokubili kuthatha izinsuku ezingu-540, kokubili kunomkhawulo ongu-5×, kokubili kuzuza ngokukhiqizwa kwamabhulokhi nsuku zonke futhi kokubili kungenza ukunqwabelana kwenzalo. Ibhondi lingenwa nge-USDT futhi ubuhle balo yisaphulelo: i-RM eningi lapho ungena, bese kukhululwa imali eyinhloko nemiklomelo nsuku zonke. I-staking yesikhathi eside ingenwa nge-USDT noma nge-RM futhi ubuhle bayo yisivuno sesikhathi eside kanye nemiklomelo eyengeziwe. Ngamafuphi ephrojekthi: ibhondi = ukungena ngesaphulelo, i-RM eningi, ukukhululwa nsuku zonke, ukunqwabelana kwenzalo, kuze kufike ku-5×; i-staking = ukungena nge-USDT noma nge-RM, isivuno sesikhathi eside, imiklomelo eyengeziwe, imiklomelo yansuku zonke, ukunqwabelana kwenzalo, kuze kufike ku-5×.

Isibonelo sephrojekthi esibaliwe: uma intengo ye-RM ingu-30 nentengo yebhondi ingu-24, u-10,000 USDT uthenga u-333.3 RM emakethe no-416.7 RM ngebhondi, okungu-83.4 ngaphezulu lapho ungena. Buza umuntu ukuthi yini ayifunayo: i-RM eningi ngosuku lokuqala, noma imiklomelo eyengeziwe ye-staking.

Umthombo: Iqembu lamazwe ngamazwe le-Spartan OS, iqembu lomsebenzi, 25 Septhemba 2026, kwaphinde kwashicilelwa esigabeni esithi Okusemthethweni

INGXENYE IV

Ukuphikisa

Lokho abantu abakusho bephikisa, nempendulo eqinile. Impendulo emfushane okufanele uyisho ngokuzwakalayo, ende eyesikhathi lapho bephikelela, nomusho ongafanele uwusho.

Zonke izibalo njengoba kushiwo yi-Spartan OS noma i-Anubis Chain ngosuku olushiwo. Amazinga ayashintsha; imikhawulo imiswa lapho ungena. Akusona iseluleko sezezimali.

01 · INGABE LOLU WUHLELO LWE-PONZI?

Buza ukuthi basho ukuthini, bese uphendula ngendlela okusebenza ngayo. I-Ponzi ikhokha imali endala ngemali entsha futhi iyakufihla lokho. Lapha yonke inkokhelo iwukuthenga: i-turbine yenza i-claim ngayinye ithenge inani elifanayo le-RM ku-DEX ngaphambi kokuba ikhululwe, i-treasury, i-liquidity namakheli ezikhwama asobala ku-explorer yomphakathi, futhi yonke iphozishini yesikhathi eside inomkhawulo onqunywe ngamadola ngosuku evulwa ngalo.

Inguqulo ethembekile inezingxenye ezintathu. Okokuqala, okungahlolwa namuhla: izinqolobane ze-bridge ku-Etherscan, izibalo ze-treasury ne-liquidity edeshibhodini ye-dApp, ukuhweba kwe-RM nemizuliswano ye-TempleRaid ku-browser.anubispace.org, ukuhlolwa kwe-CertiK kwezinkontileka ze-Spartan OS (azikho ezibucayi, azikho ezinkulu, ezintathu ezimaphakathi zixazululiwe). Okwesibili, okuyisitatimende sephrojekthi uqobo kunokuba kube yiqiniso ongalihlola: amazinga, uhlelo lwendlela, izibalo zabasebenzisi. Okwesithathu, ubungozi: amazinga ayashintsha, intengo iyanyakaza, intela yokuthengisa iyakhuphuka lapho intengo yehla, futhi umkhawulo usho ukuthi iphozishini iyaphela. Umuntu ozwa zonke ezintathu kuwe uzokwethemba okunye.

Ungasho ukuthi 'akunakwenzeka'. Ungakuqhathanisi nebhange. Ungacaphuni isibalo sonyaka.

02 · INZUZO IPHEZULU KAKHULU UKUTHI IBE YIQINISO.

Iphezulu, iyashintsha, futhi inomkhawulo. U-1.1% kuya ku-1.3% ngosuku kuphozishini yesikhathi eside yizinga elishiwo ngalolo suku; umkhawulo ungu-4× kuya ku-5× walokho okufakiwe, unqunywe nge-USDT; i-pool eguquguqukayo ikhokha cishe u-0.3% njalo emahoreni angu-12 futhi ingashintsha. Sho umkhawulo ngomoya owodwa nezinga, njalo.

Chaza ukuthi inkokhelo ivelaphi njengoba iphrojekthi iyichaza: ukukhishwa kwe-RM, ukwabiwa kwenkokhelo yokuthengisa (0.5% inkundla, 1.2% ukuthenga kabusha, 1.3% umphakathi, 2.0% isizinda), intela eyengeziwe yokuthengisa lapho intengo yehla, ne-turbine eguqula yonke i-claim ibe ukuthenga. Bese uchaza okuyikhawulayo: umkhawulo kuyo yonke iphozishini yesikhathi eside, ukurekhodwa kwe-rebase, nephrothokholi ye-O² enciphisa ukuthengisa lapho intengo yehla. Okuphezulu nokungenamkhawulo kuyindaba. Okuphezulu, okunomkhawulo nokunosuku kuyishidi lemigomo.

Ungalokothi uthi 'kuqinisekisiwe'. Ungalokothi ubikezele imali engenayo yenyanga sengathi izinga limisiwe.

03 · UBANI ONGEMUVA KWAKHO? ANGIBATHOLI ABASUNGULI.

I-Anubis Foundation, eyakha i-Origin (LGNS), i-WebKey ne-Melos, futhi manje isinayo iketango layo. I-Anubis Labs yingalo yokuxhasa ngezimali; i-Spartan OS iwuhlelo lwayo lokusebenza lokuqala. Iqembu lishicilela ngaphansi kwegama lesisekelo esikhundleni samagama abantu, okuvamile kule ngxenye yemboni futhi kuyinto efanelekile ukungayithandi. Ongakuhlola ngumsebenzi: iketango belisebenza kusukela ngo-Ephreli 2026 nokuthengiselana okungaphezu kuka-100 wezigidi, futhi izinkontileka zahlolwa yi-CertiK.

Umkhondo wesisekelo usobala: iminyaka emibili, amazwekazi amahlanu, amaphrojekthi ayikhulu, nesithombe sesimo se-Origin sabanikazi abangu-2.5 wezigidi nenani lemakethe elingu-$1.4 wezigidigidi esiqongweni sayo. Abaphathi benkampani baqhuba i-Spartan OS ngohlelo olushiwo lokuyiqhuba iminyaka eminingi, nokuyenza ibe nkulu futhi ibe ngcono kune-Origin. Ihhovisi laseDubai nemihlangano yabaholi yilapho abantu bahlangana khona nabo ubuso nobuso. Sho ngokucacile ukuthi amagama abasunguli awadalulwa emphakathini, nokuthi umuntu othatha isinqumo kufanele alinganise lokho nekhodi esobala, iketango elisobala nokuhlolwa.

Ungaqambi igama lomsunguli noma ubuzwe bakhe. Ungathi uhlangene nomuntu ongakaze uhlangane naye.

04 · NGINGALAHLEKELWA YIMALI?

Yebo. I-RM iyithokheni elihwebelanwayo; inani ledola layo yonke inkokhelo lincike entengweni yangalolo suku. Ukuthengisa ngesikhathi intengo yehla kunentela ekhuphuka ngokwehla. I-TempleRaid ingumdlalo wenhlanhla. Iphozishini yesikhathi eside ayikwazi ukuhoxiswa ngaphambi kwesikhathi. Noma ubani okutshela okuhlukile akaluchazi uhlelo.

Bese uchaza lokho iphrojekthi ekwakhile ukunciphisa umonakalo, ngaphandle kokukwethula njengesisekelo sentengo: imikhawulo imiswa lapho ungena ukuze iphozishini ingakwazi ukujaha, i-turbine eguqula ama-claim abe ukuthenga, i-O² ekhuphula intela yokuthengisa futhi ivikele i-liquidity lapho intengo yehla ngo-5% noma ngaphezulu uma iqhathaniswa nesilinganiso samahora amathathu, isikhwama sokuthenga kabusha, nesikhwama sokuzinzisa intengo esingu-1,000,000 USDT ekhelini elishicilelwe. Akukho siqinisekiso kunoma yikuphi kwalokhu. Konke kuku-dApp noma ku-explorer.

Ungasho ukuthi 'ngeke ulahlekelwe'. Ungasho ukuthi intengo 'ihlala ibuya'.

05 · KUNGANI NGINGAKWAZI UKUKHIPHA IMIKLOMELO YAMI NGOKUSHESHA?

Ungakwazi, ngemva kwesinyathelo esisodwa. Yonke i-claim ingena ku-turbine: uthenga inani elifanayo le-RM ku-RocketSwap, i-claim iyavuleka ngemva kwamahora angu-24, futhi i-RM oyithengile nayo ingeyakho. Imali engenayo yamazinga idinga namandla ngaphezulu, iyunithi eyodwa nge-RM ngayinye, evela ku-staking yezinsuku ezingu-360 noma ekushiseni i-RM.

I-turbine yindlela iphrojekthi ekhomba kuyo uma ibuzwa ukuthi ithokheni elikhokha inzuzo nsuku zonke lihlale kanjani ngaphezu kuka-$30 izinyanga eziningi: inzuzo uqobo iyingcindezi yokuthenga. Kusho futhi ukuthi yonke inkokhelo idinga ukuthenga okulinganayo ngaphambi kokuba ithengiswe, okuyinto umgqugquzeli okufanele ayisho ngokuzwakalayo. Amandla asebenza kuphela emalini engenayo yamazinga engu-8%, 4% no-2%, hhayi ku-staking yakho siqu, emabhondini noma emiklomelweni yezikhundla.

Ungayichazi i-turbine njengenkokhelo yesevisi. Ungawashiyi ngaphandle amahora angu-24.

06 · INGABE KUHLOLIWE? INGABE IMALI YAMI IPHEPHILE KULELI KETANGO?

I-Spartan OS yaqeda ukuhlolwa kwe-CertiK ngomhla ka-2 Agasti 2026: i-multisig yokubusa, i-treasury, i-staking, ukwabiwa kwemiklomelo nezinkontileka eziyinhloko zamathokheni, kungekho okutholakele okubucayi noma okukhulu, futhi okutholakele okuthathu okuphakathi nendawo kwaxazululwa. I-GaleBridge yahlolwa yi-CertiK ngo-Okthoba 2025. I-Anubis Chain ithi izinkontileka eziyinhloko ezingu-137 zihlolwe yi-CertiK ne-Armor. Yonke impahla edluliswe nge-bridge yakhiwa ngokulingana okukodwa kokukodwa nezimpahla ezikhiywe ezinkontilekeni ze-bridge ongazifunda ku-Etherscan.

Ukuphepha lapho ungena kusezandleni zomsebenzisi ikakhulukazi: i-chain ID 6714, amakheli athayiphwe kuleli khasi, izinhlamvu ezine zokuqala nezine zokugcina zihloliwe, ukuhlola okuncane kuqala, amagama okuvuselela (seed phrase) ephepheni. Izaziso ezimbili zamanje zibalulekile: alukho uhlelo lokusebenza olusemthethweni olubizwa ngokuthi 'Anubischat', futhi i-CertiK ixwayisa ngekhodi eyingozi ephinde yafakwa ezinhlelweni zokusebenza ze-iOS. Dlulisela zombili. Ukuhlolwa kumboza ikhodi. Akusimbozi isixhumanisi sokukhwabanisa.

Ungasho ukuthi 'kuhloliwe' ngaphandle kokusho ukuthi kuhlolwe ngubani futhi nini. Ungathumeli izixhumanisi ezivela ezingxoxweni.

07 · NGALAHLEKELWA NGENXA YE-ORIGIN, NOMA NGENYE IPHROJEKTHI EFANA NALE.

Khona-ke usuyayazi imibuzo emibili ebalulekile: yini ekhawulela inkokhelo, futhi kwenzekani uma intengo yehla. I-Spartan OS iphendula owokuqala ngomkhawulo omiswa lapho ungena, kanti owesibili ngo-O^2, intela yokuthengisa nesikhwama sokuthenga kabusha. I-Origin yayidinga imilenze emithathu; i-Spartan OS idinga emibili. Ikhodi iyiyo leyo i-Origin eyayisebenza ngayo, eketangweni manje eliphethwe yisisekelo esifanayo.

Ungaphikisani ngokwedlule. Buza ukuthi yini eyonakala kubo: ngokuvamile izinga elingenamkhawulo, indlela yokuphuma eyavalwa, noma isithembiso somgqugquzeli. Bonisa umkhawulo, bonisa i-turbine, bonisa ithebula lentela yokuthengisa, futhi ubonise i-explorer. Bese ubayeka banqume ubukhulu, futhi uphakamise iphozishini encane kuqala. Cishe u-$55 wezigidi usesele ku-pool ye-Origin ku-Polygon ngemuva kweminyaka emibili; lelo yiqiniso ngokuhlala isikhathi eside, hhayi isithembiso ngale.

Ungawanyundeli amanye amaphrojekthi ngamagama awo. Ungathembisi ukuthi le ihlukile; bonisa okuhlukile.

08 · KUNGANI NGIDINGA ISIXHUMANISI SOKUMEMA? LOKHU WUKUMAKETHA KWAMAZINGA AMANINGI.

Uhlelo lukhokhela ukwakha umphakathi, obala: u-8%, 4% no-2% we-ROI emazingeni amathathu, bese kuba yizikhundla ezingu-12 ezikhokhwa ku-pool ye-DAO ngokomlenze omncane. Isixhumanisi sokumema yindlela i-dApp eyazi ngayo ukuthi ubani owethula bani. Akekho ozuza emalini efakwe ngumuntu omusha ongenisiwe; imali engenayo yamazinga iyisabelo salokho okuzuzwa yiphozishini yalowo muntu uqobo.

Sho lokho isakhiwo sezikhundla esikudingayo ngaphambi kokusho lokho esikukhokhayo: iphozishini yakho, inani labangeniswe ngqo kusukela ku-100 USDT, nevolumu emilenzeni emibili, umlenze omkhulu unikeza isikhundla, omncane uyakhokha. Iningi labantu lizohlala ku-V1 kuya ku-V3. Sebenzisa isibali sezikhundla nezibalo zabo zangempela kunokusebenzisa okuphezulu kwethebula. Isixhumanisi sokumema ngesabo ukusisebenzisa noma cha; imikhiqizo ye-staking ikhokha ngokufanayo noma kunjani.

Ungathengisi isitebhisi esingaphezu kwe-V5 kumuntu ongakavuli iphozishini yokuqala. Ungakubizi ngokuthi 'akudingi mzamo'.

09 · KWENZEKANI UMA IPHOZISHINI YAMI IFIKA EMKHAWULWENI?

Isiphelele. Iphozishini yezinsuku ezingu-540 eyathatha u-$1,000 isikhokhe u-$5,000 wenani le-RM, kuhlanganise nemali eyinhloko (kwafakazelwa ngomhla ka-26 Septhemba 2026: imali eyinhloko ibalwa ngaphakathi komkhawulo futhi ayikhokhwa ngaphezulu), bese iyavalwa. Uvula entsha uma ufuna ukuqhubeka. I-staking eguquguqukayo ayinawo umkhawulo futhi ayinasikhathi esinqunyiwe; imali eyinhloko ingakhishwa noma nini.

Ngamazinga njengoba kushiwo, amaphozishini ezinsuku ezingu-360 no-540 afika emkhawulweni wawo ezinyangeni ezingaba yishumi, ngaphambi kokuba isikhathi sawo siphele; iphozishini yezinsuku ezingu-180 ifika ekupheleni kwesikhathi sayo kuqala. Ibhondi lokushisa likhulula u-250% we-oda ezinyangeni ezingaba yisihlanu nengxenye ngo-1.5% ngosuku. Sho ukuthi yikuphi okusebenzayo, nokuthi konke lokhu kuyizibalo ezisekelwe ezingeni elishiwo lanamuhla, elishintshayo.

Ungawuchazi umkhawulo njengokulahlekelwa. Ungathembisi ukuvuselelwa ngemigomo efanayo.

10 · KUNGANI IQEMBU LASESHAYINA, FUTHI KUNGANI KONKE KUQALA NGESISHAYINA?

Ngoba isisekelo singesamaShayina, futhi ngoba umphakathi waso wakhiwa lapho kuqala: abanikazi be-Origin abangu-2.5 wezigidi, abasebenzisi be-Melos ne-WebKey, imicimbi yokwethula eKuala Lumpur nasesifundeni. Izinsiza zesiNgisi zikhona ngoba lowo mphakathi manje usakhiwa lapha. Iketango, izinkontileka ne-explorer akunalo ulimi.

Lo mtapo ukhona ngalesi sizathu: amadokhumenti asemthethweni ahunyushiwe noma akhiqizwe kabusha njengoba ekhishiwe, izimemezelo ngesiNgisi esilula zinosuku, izifundo ezinemibhalo engezansi yesiNgisi, nendawo eyodwa yokuhlola isibalo. Uma ukukhathazeka komuntu kumayelana nokuziphendulela kunolimi, kuphendule ngokuhlolwa, iketango elisobala nemihlangano yaseDubai.

Ungakwenzi kube ngobuzwe. Ungahumushi isibalo ongakasihloli.

11 · NGINGAFAKA IMALI ENKULU NGOKUSHESHA?

Ungakwazi. Ungakwenzi. Qala ngenani ongeke ulidinge, wenze umjikelezo owodwa ophelele (uku-stake, uku-claim, i-turbine, ukukhululwa), bese unquma. Uhlelo luklomelisa amaphozishini esikhathi eside, futhi iphozishini yesikhathi eside ayikwazi ukuhoxiswa ngaphambi kwesikhathi, ngakho isinqumo sesibili kufanele senziwe usunalo ulwazi lwesokuqala.

Umholi otshela umuntu omusha ukuthi aqale kancane nguye umholi lowo muntu ahlala naye. Bonisa amanani aphansi: u-1 USDT we-staking namabhondi, u-500 USDT wesikhwama sokuzinza, u-200 USDT wesitsha semiklomelo eyengeziwe kumaphozishini ezinsuku ezingu-360 no-540. Bese ubonisa ukuthi umkhiqizo ngamunye ukhokhani ngenani labo esibalini, kunamathiselwe umkhawulo nosuku.

Ungabeki isibalo esihlosiwe. Ungayinqwabeleli imikhiqizo umuntu ongamazi.

12 · MANGAKI AMAPHESENTI EMALI EFAKWAYO NGAYINYE AYA KUNETHIWEKHI?

Alikho, ngoba akusiyo indlela esebenza ngayo. I-Spartan OS ithi imali eyinhloko engena ephrothokholini iya ohlangothini lwezimpahla, ku-liquidity, ku-treasury naku-liquidity ephethwe yiphrothokholi, kanti i-RM yakhiwa ngokuhambisana nayo ngaphansi kwemithetho yephrothokholi, ikhiywe, ikhululwe ngendlela elawulwayo futhi ilinganiswe yi-O². Iphesenti belingachaza isikhwama esihlukanisa izimali ezifakwayo, futhi iphrojekthi ithi ayiqhubi isikhwama esinjalo.

Nikeza izinhlangothi zombili ngokuphefumula okukodwa: yiziphi izimpahla zephrothokholi imali ezidalayo, nokuthi yisiphi isamba se-RM esizayo esidalwa ngokumelene nayo nokuthi sifika kanjani emakethe. Bese unikeza umbuzo wokuhlolisisa wephrojekthi uqobo: kuyo yonke iyunithi yemali eyinhloko, yiziphi izimpahla ezidalwayo, yisiphi isamba se-RM noma isibopho esizayo esikhiqizwayo, sikhululwa kanjani, futhi yini esilinganisa nesidingo sangempela ne-liquidity. Khomba idatha ewuphendulayo: ukukhishwa okusele kwe-RM, amavolumu okuthenga kabusha nokushisa, i-POL nokujula kwe-liquidity, ukuhlala kwamalungu, nokwehla nokululama kwangomhla ka-13 Septhemba.

Ungaqambi amaphesenti ukuze wanelise umbuzo. Ungasho ukuthi izindlela ziqinisekisa noma yini; isitatimende sithi azikwazi ukulawula ukuziphatha.

13 · I-RM IMANE IWUKUKHISHWA OKUTHENGISWAYO. WONKE AMATHOKHENI ANJE AGCINA EYINGCINDEZI YOKUTHENGISA.

Yilobo bungozi uhlelo olwakhelwe ukububhekana nabo, futhi iphrojekthi iyakusho lokho ezimpendulweni zayo zokuhlolisisa. I-RM ayifiki emakethe lapho yakhiwa: i-staking yesikhathi eside, amabhondi ezinsuku ezingu-360 no-540 nokunqwabelana kwenzalo kuyayibamba; yonke i-claim ye-Turbo idinga ukuthenga okulingana nayo, bese kuhlala esikhathini sokuthula samahora angu-24; i-RM eshiswe ukuze kutholakale amandla iphuma esambeni unomphela; i-O² ikhuphula isivikelo sohlangothi lokuthengisa uma ukuthengisa kudlula ukuthenga; futhi izinhlelo zokusebenza zenzelwe ukuyisebenzisa. Akukho kulokho okuqinisekisa intengo.

Banike izibalo okufanele bazibheke kunokuphikisana: isamba esisha se-RM uma siqhathaniswa nesamba esijikelezayo, isidingo sokuthenga se-Turbo, i-RM ekhiywe isikhathi eside, i-RM eshisiwe, nokujula kwe-liquidity. Lezo yizilinganiso zephrojekthi uqobo, futhi zonke zisedeshibhodini noma ku-explorer. Umusho owodwa okufanele uwugcine: izindlela zithuthukisa isakhiwo sokunikezwa nesidingo; ukuthi isidingo sikhula ngokwanele yini ukuze simunce ukunikezwa yilokho idatha ezokubonisa, futhi akekho ongakuthembisa.

Ungasho ukuthi i-RM ayikwazi ukwehla. Ungasho ukuthi i-O² iyakumisa ukuthengisa; inciphisa ijubane lokwehla okulandelanayo futhi inika i-liquidity isikhathi.

14 · INGABE I-TEMPLERAID INGUKUGEMBULA?

Ingumdlalo wenhlanhla lapho kubekwa khona imali, eketangweni, onokungahleleki okufakazelekayo nemizuliswano yemizuzwana engamashumi ayisithupha, futhi umdlali angalahlekelwa yilokho akufakile. Iwuhlelo lokusebenza olulodwa ku-Spartan OS, hhayi uhlelo uqobo. Akekho odinga ukuyidlala ukuze enze i-staking.

Iphrojekthi ichaza indlela yomshwalense engemuva kwayo futhi imizuliswano ingafundwa ku-explorer. Sho ubungozi ngaphambi kwesici, njalo, futhi ungalokothi uthumele umdlalo kumuntu obuze nge-staking.

Ungayichazi i-TempleRaid njengemali engenayo. Ungayithumeli kunoma ubani ongaphansi kweminyaka engu-18 noma osendaweni yomthetho lapho ingavunyelwe khona.

15 · IZIGIDI EZINGU-35 KANYE NETHI 'IZIGIDI EZINGU-50 EZILANDELAYO' KUZWAKALA NJENGESITHEMBISO.

Ziyizinombolo zephrojekthi, zinelebula yephrojekthi uqobo. U-35 wezigidi USDT yisisekelo semali eyinhloko esiphelele esishiwo ngomhla ka-26 Septhemba 2026. U-36 wezigidi no-50 wezigidi yilokho umlayezo oya kubalingani bamazwe ngamazwe okubiza ngokuthi yimigomo yentuthuko, futhi isigaba esifanayo sithi akuzona iziqinisekiso zenzuzo noma zentengo ye-RM, enqunywa ukuhlinzekwa nesidingo, i-liquidity nokuthuthukiswa komkhakha.

Thumela umlayezo uphelele kunomusho wezinyathelo ezibalulekile. Umqondo wawo uphambene nesithembiso: iphrojekthi yafinyelela ezigidini ezingu-35 ngomjikelezo owawuhlanganisa ukwehla kwentengo nesikhathi lapho ukwethemba kwavivinywa khona, futhi itshela izimakethe ezintsha leyo ndaba ukuze zingakuthathi ukukhula njengomugqa oqondile. Umfundi angahlola izibalo zedeshibhodi esigabeni esithi Imigomo yanamuhla aziqhathanise nezigidi ezingu-35 bese azenzele isiphetho mayelana nebanga eliya ku-50.

Ungasho ukuthi 'siya ezigidini ezingu-50'. Ungaguquli inhloso ibe usuku. Ungacaphuni izinyathelo ezibalulekile ngaphandle komusho ozilandelayo.

05

INGXENYE V

Ukuhlolisisa: imibuzo eyishumi nanye, iphendulwe yiphrojekthi

Ilungu labuza iphrojekthi imibuzo eyisikhombisa ngomhla ka-24 Septhemba 2026, kwathi imibuzo emine elandelayo yaphendulwa ngomhla ka-26 Septhemba: ibhonasi yesikhundla esifanayo, i-staking ye-V12, isiphindaphindi samandla, nokuthi imali eyinhloko ingaphakathi yini komkhawulo. Izimpendulo, ezikhishwe yi-Spartan OS futhi zadluliswa njengezivela ku-Anubis Foundation, zikhiqizwe kabusha njengoba zinikeziwe, izinombolo zigcinwe. Caphuna impendulo iyonke noma uthumele isigaba; ngayinye inemingcele yayo ngamazwi ayo.

Zonke izibalo njengoba kushiwo yi-Spartan OS noma i-Anubis Chain ngosuku olushiwo. Amazinga ayashintsha; imikhawulo imiswa lapho ungena. Akusona iseluleko sezezimali.

Kwamukelwe ngomhla ka-26 Septhemba 2026 · imibuzo emine elandelayo

UMBUZO OLANDELAYO 1 KWENGU-4

Ingakanani i-% yomklomelo wesikhundla esifanayo? Ngingu-V8 futhi iqembu lami lingu-V8?

Umklomelo wesikhundla esifanayo ungu-10%–15%, obalwa ngokusekelwe emalini engenayo yomuntu osesikhundleni esifanayo oseduze kakhulu ngaphansi kwesakhiwo sakho.

Isibonelo, uma uyi-V5 futhi kunama-akhawunti amabili e-V5 ngaphansi kwakho—elinye esizukulwaneni sokuqala, elinye esizukulwaneni sesibili—umklomelo wesikhundla esifanayo ubalwa kusuka ku-V5 eseduze kakhulu, okuyi-V5 yesizukulwane sokuqala. Uthola u-10%–15% wemali engenayo efanele yaleyo V5.

Awuwutholi kaninginingi umklomelo wesikhundla esifanayo kuyo yonke i-V5 engaphansi kwaleyo ndawo.

Umklomelo wokweqa ulandela umgomo ofanayo wendawo eseduze kakhulu.

Ngakho-ke, uma uyi-V8 futhi kukhona i-V8 ngaphansi kweqembu lakho, uthola u-10%–15% wemali engenayo efanele yendawo ye-V8 eseduze kakhulu efanelekayo.

UMBUZO OLANDELAYO 2 KWENGU-4

Siyini isisindo sokubusa se-V12 — 25,000 noma 50,000?

Ngokwethebula lezikhundla lamanje lenguqulo yabaholi, i-V12 idinga u-50,000 USDT.

Ukuze sicacise, u-50,000 USDT usho imfuneko ye-staking yakho siqu ye-V12, hhayi ipharamitha ehlukile ethi "isisindo sokubusa".

Ngakho-ke umthetho wamanje uthi:

I-staking yakho siqu ye-V12 = 50,000 USDT.

Isibalo esingu-25,000 akufanele sisetshenziswe njengemfuneko yamanje ye-staking yakho siqu ye-V12.

UMBUZO OLANDELAYO 3 KWENGU-4

Isiphindaphindi samandla: i-DApp ibonisa u-260% no-557%, Ukuhlaziywa Kwemodeli Yezomnotho kuthi u-150% no-200%, kanti izimpendulo zalobu busuku zithi 2–6× ekushiseni. Yisiphi esilungile?

Okuboniswa yi-DApp njengamanje kufanele kusetshenziswe njengomthombo wokugcina wokubhekisela.

Kunezindlela ezimbili ezahlukene zamandla eziboniswa njengamanje ku-DApp:

I-staking yamandla = 260%

Ukushisa i-RM ukuthola amandla = 557%

Lezi yizindlela ezimbili ezihlukene futhi akufanele zixutshwe.

Okubaluleke kakhulu, u-260% no-557% ngamapharamitha ephrothokholi ashintshashintshayo, hhayi amazinga amiswe unomphela. Iphrothokholi ingawalungisa lawa manani, ngakho izibalo zingashintsha ngokuhamba kwesikhathi.

Izibalo ezingu-150%/200% ezisezinsizeni zangaphambilini zoKuhlaziywa Kwemodeli Yezomnotho, kanye nezincazelo zangaphambilini zebanga lokushisa elingu-2–6×, akufanele zithathe indawo yamapharamitha

e-DApp asebenza manje.

Ngakho-ke, abagqugquzeli kufanele bahlale besebenzisa amanani akamuva aboniswa ku-DApp.

Njengamanje: I-staking = 260%, Ukushisa = 557%. Lawa manani ayashintshashintsha futhi angalungiswa yiphrothokholi. I-DApp ihlala iwumthombo wokugcina wokubhekisela.

UMBUZO OLANDELAYO 4 KWENGU-4

Ingabe imali eyinhloko yokuqala evela ku-staking noma emabhondini ibalwa ngaphakathi ku-4×/5×, noma umklomelo we-4×/5× ukhokhwa nemali eyinhloko ngaphezulu?

Imali eyinhloko yokuqala ifakiwe ngaphakathi komkhawulo wokukhululwa ophelele we-4×/5×.

Indlela ikhulula imali eyinhloko + inzuzo ndawonye ngokuhamba kwesikhathi. Imali eyinhloko ayibuyiselwa ngokwehlukana ngaphezulu ngemuva kokuba i-4×/5× isiphelile.

Isibonelo, uma iphozishini inomkhawulo ophelele we-5×, kokubili imali eyinhloko nenzuzo ekhululwa yiphrothokholi kubalwa ngaphakathi kwaleso samba se-5×.

Ngakho-ke incazelo efanele ithi:

Imali eyinhloko + inzuzo kukhululwa ndawonye, futhi kokubili kufakiwe ngaphakathi komkhawulo wokukhululwa ophelele we-4×/5×. Imali eyinhloko akuyona inkokhelo eyengeziwe ngaphezu kwe-4×/5×.

Kwamukelwe ngomhla ka-24 Septhemba 2026 · imibuzo eyisikhombisa

UMBUZO 1 KWENGU-7

Iyiphi inhloso ethile yezomnotho efezwa yi-GD engenakufezwa ngethokheni lokubusa elijwayelekile noma ngethokheni elizinzile?

I-GD isebenza njengesendlalelo esiyivelakancane sokubusa namalungelo esizinda esikhathi eside se-SpartanOS. Ihlukaniswe ngamabomu kokubili namathokheni azinzile ne-RM ngoba lezi zimpahla zenza imisebenzi yezomnotho ehluke ngokuyisisekelo.

Amathokheni azinzile ikakhulukazi ahlinzeka ngokubeka intengo, ukungena kwemali eyinhloko, nokuphothulwa kwezinkokhelo. I-RM iyimpahla yezomnotho esetshenziswa kaningi kakhulu ezikhuthazweni, ku-staking, emabhondini, ku-liquidity, ekunqwabelaneni kwenzalo, ekushiseni, nasekubambeni iqhaza ezinhlelweni zokusebenza. I-GD yona, ngokuphambene, yakhelwe ukumela amalungelo okubusa ayivelakancane nokubamba iqhaza esizindeni isikhathi eside.

I-GD inesamba esiphezulu esimisiwe samathokheni angu-390,000. Isamba sayo esiphezulu asandi nje ngoba i-SpartanOS ithola abasebenzisi abaningi, i-TVL, noma izinhlelo zokusebenza.

Ukufinyelela ku-GD kubuye kukhawulwe wumnotho wamathokheni wokuqala. Izindlela ezifanele zihlanganisa amalungelo anikezwe abanikazi be-NFT bokuqala, izabelo zokubusa nezesizinda ezinqunywe kusengaphambili, amalungelo okubusa e-GD ahlobene ne-RM Stable Vault, kanye nokujikeleza emakethe yesibili.

Umehluko obalulekile uphathelene ne-GD ehlobene ne-RM Stable Vault. Lawo malungelo e-GD akhululwa ngokulinganayo emasontweni angu-30, kodwa awakhiqizwa kabusha ngenxa yokuthi i-Stable Vault ikhona. Avela ku-GD ebisivele yabiwe ngaphansi komnotho wamathokheni wokuqala, kuhlanganise nesabelo sokuqala esingu-25% sezikhuthazo ze-liquidity. Isakhiwo sokwabiwa sokuqala sibuye sihlanganise isigcinamali sobungozi se-treasury yephrothokholi esingu-5%. Ngakho-ke, i-Stable Vault ayishintshi umqondo wesamba esiphezulu se-GD esingu-390,000.

Isizathu sokuthi i-SpartanOS ingasebenzisi i-RM kuyo yonke into ukuthi i-RM uqobo yakhelwe ukujikeleza emjikelezweni wezomnotho ophindaphindeka kaningi kakhulu: izikhuthazo → i-staking → amabhondi → i-liquidity → izinhlelo zokusebenza → ukukhululwa → isidingo semakethe → ukushisa. Ukuhlanganisa leyo ndima namalungelo okubusa esikhathi eside ayivelakancane kakhulu esizindeni kungafaka izinhloso ezimbili ezahlukene zezomnotho empahleni eyodwa.

Namathokheni azinzile awakwazi ukwenza le ndima ngokugcwele. Inhloso yawo eyinhloko yezomnotho ukulinganisa amanani ngokuzinzile nokuphothula izinkokhelo, hhayi ukumela impahla yokubusa eyivelakancane enesamba esihlala simisiwe ngesikhathi isizinda esiyizungezile sikhula.

Lokhu kuhlukaniswa kwezindima zezomnotho akuyona into engavamile emalini yedijithali. Amaphrothokholi amakhulu nawo ahlukanise izimpahla zokuphothula izinkokhelo noma ezikhiqizayo nezimpahla zokubusa nezamalungelo esizinda. Ukuqhathanisa akusho ukuthi i-GD ilingana nalawo mathokheni; kubonisa umgomo obanzi wezomnotho wemali yedijithali: ukujikeleza kwezomnotho okuphindaphindeka kaningi kanye namalungelo okubusa ayivelakancane akudingeki ukuthi amelwe yimpahla efanayo.

Ithokheni lokubusa elijwayelekile lingaklanywa ngokwethiyori libe nezici ezifanayo. Ngakho-ke, umehluko we-GD awukhona nje ukuthi ibizwa ngokuthi ithokheni lokubusa. Umehluko wayo wesikhathi eside kufanele uvele ekutheni i-SpartanOS iyakwazi yini ukuqhubeka inamathisela amalungelo okubusa anenjongo, ukusebenziseka ezinhlelweni zokusebenza, nokubamba iqhaza esizindeni esambeni esimisiwe se-GD esingu-390,000. Isizinda singakhula. Izinhlelo zokusebenza zingakhula. Inani labasebenzisi lingakhula. Isamba esiphezulu se-GD asidingi ukukhula nazo. Leyo yinhloso eyinhloko yezomnotho ye-GD.

UMBUZO 2 KWENGU-7

Yini edala isidingo sesakhiwo se-GD ngokusetshenziswa kwangempela kwe-SpartanOS?

Isidingo sesakhiwo se-GD asikwazi ukuvela kubuvelakancane kuphela. Ubuvelakancane abudali isidingo ngokuzenzakalela. Ukusebenziseka kuyasidala.

Isakhiwo sesidingo sesikhathi eside esihloselwe i-GD sithi: isamba esimisiwe + ukutholakala okulinganiselwe + isidingo sokubusa + ukusebenziseka ezinhlelweni zokusebenza + ukukhula kwesizinda.

I-GD isiqala ukudlula ekubeni yimpahla yokubusa kuphela iye ekusetshenzisweni kwangempela ezinhlelweni zokusebenza. Isibonelo, izinhlelo zokusebenza ezifana ne-TempleRaid ziletha i-GD, i-RM, nezinye izimpahla zesizinda se-AnubisChain ekusetshenzisweni ezingeni lezinhlelo zokusebenza. Lokhu kumele ushintsho olubalulekile kusuka ekubambeni nje impahla yokubusa kuya ekuyisebenziseni kukho kokubili ukubusa nezinhlelo zokusebenza.

Njengoba imidlalo eyengeziwe, izinhlelo zokusebenza ze-DeFi, imikhiqizo ye-RWA, izinhlelo ze-DID/NFT, ingqalasizinda yokuhweba, namanye ama-DApp kungena esizindeni, i-GD ingasekela kancane kancane ukubamba iqhaza okwengeziwe ekubuseni, amalungelo ezinhlelo zokusebenza, izimvume zesizinda, noma okunye ukusebenziseka.

Ngakho-ke ubudlelwano bezomnotho esifuna ukubusungula buqondile: inani lezinhlelo zokusebenza lingakhula; inani labasebenzisi lingakhula; ubuningi bokusebenziseka obunamathiselwe ku-GD bungakhula; kodwa isamba esiphezulu se-GD sihlala singu-390,000. Lona ngumehluko obalulekile phakathi kwesidingo sokuqagela nesidingo sesakhiwo.

I-ETH inikeza iphuzu lokubhekisela elijwayelekile eliwusizo kulo mgomo, nakuba imodeli yayo yezomnotho ihlukile. Isidingo se-ETH asisekelwe kuphela ekutheni abantu bakhetha ukugcina i-ETH; i-ETH iyadingeka ku-gas, ibamba iqhaza ku-staking, futhi isetshenziswa kuso sonke isizinda se-Ethereum. I-GD kufanele

ekugcineni izifakazele ngomgomo ofanayo obanzi wezomnotho: ukusebenziseka kwangempela kufanele kusekele isidingo sesikhathi eside.

Ngaleso sizathu, i-GD akufanele ihlaziywe ngentengo yayo yemakethe kuphela. Izilinganiso ezinomqondo kakhulu zihlanganisa inani lamakheli e-GD asebenzayo, ukusabalala kobunikazi, ukubamba iqhaza ekubuseni, inani lezinhlelo zokusebenza ezisebenzisa i-GD, ukuxhumana ezinhlelweni zokusebenza, nokusetshenziswa kwangempela on-chain. Uma isizinda sikhula kodwa ukusetshenziswa kwe-GD kungakhuli, khona-ke isidingo sesakhiwo asikafakazelwa. Uma izinhlelo zokusebenza nabasebenzisi abaningi bedinga ngempela i-GD ngesikhathi isamba esiphezulu sihlala simisiwe ku-390,000, khona-ke i-GD ithuthukisa isidingo sesakhiwo esiqhutshwa ukusebenziseka.

UMBUZO 3 KWENGU-7

I-RM yakhelwe ukukhuthaza abasebenzisi, abathuthukisi, nokubamba iqhaza komphakathi. Yini evimbela i-RM ukuthi ibe ithokheni lokukhishwa nengcindezi yokuthengisa kuphela ngokuhamba kwesikhathi?

I-RM ayakhelwe ukulawula ukukhishwa kuphela. I-SpartanOS izama ukuphatha zombili izinhlangothi zesibalo: ukuthi i-RM ingena kanjani ekujikelezeni nokuthi yini edala isidingo se-RM uma isingenile. Uma indlela yezomnotho yesikhathi eside yethokheni imane ithi khiqiza → klomelisa → thengisa, khona-ke ukukhishwa okwandayo ekugcineni kungaguquka kube yingcindezi yokuthengisa eqhubekayo. Ngakho-ke i-SpartanOS ihlanganisa ukukhululwa okulawulwayo, ukukhiya kwesikhathi eside, isidingo sokuthenga emakethe, ukushisa, izikhuthazo eziguquguqukayo, isidingo sezinhlelo zokusebenza, nokulinganisa i-liquidity.

Okokuqala, ukukhiqizwa kwe-RM akusho ukuthi yonke i-RM ingena ngokushesha emakethe evulekile. I-staking yesikhathi eside, amabhondi e-liquidity esikhathi eside ezinsuku ezingu-360/540, ukunqwabelana kwenzalo, nohlelo lwamandla kuthinta ukuthi nini futhi ingakanani i-RM eba yisamba esijikelezayo sangempela. Uhlelo lwamandla lubuye ludale indlela yokusetshenziswa kwe-RM. I-RM ingashiswa ukuze kutholwe inani lamandla elingu-2–6×, kanti i-staking yamandla uqobo ilandela isakhiwo sezinsuku ezingu-360. Ngakho-ke i-RM inendlela yokusetshenziswa ngaphezu kwemisebenzi yayo yomklomelo neyokuhweba.

Okwesibili, i-Turbo Engine ye-1:1 yethula isidingo esihambisanayo sokuthenga emakethe. Ngaphansi kwendlela yomklomelo efanele, uhlelo alusebenzi ohlangothini lomklomelo kuphela. Imiklomelo ehambisanayo idinga ukuthengwa kwe-RM emakethe ngo-1:1, okudala uhlangothi lwesidingo olubhekene nokukhululwa kwamathokheni. Lona ngumehluko obalulekile. Inhloso akukhona ukwenqabela abasebenzisi ukuthengisa i-RM. Umbuzo wezomnotho ngowokuthi i-RM engena ekujikelezeni ihambisana yini nesidingo semakethe sangempela esanele. I-RM ethengwe nge-Turbo nayo ingena esikhathini sokuthula samahora angu-24, kanti intela eyisisekelo yokuthengisa ingu-5%, okunciphisa amathuba okuthi lokho kuthenga kuphenduke ngokushesha kube yi-oda lokuthengisa elilinganayo lesikhathi esifushane.

Okwesithathu, i-SpartanOS isebenzisa iphrothokholi yokulinganisa ezivumelanisayo ye-O2. I-O2 isebenza ngomjikelezo wamahora amathathu futhi ifaka i-TWAP ngesikhathi ibheka izinto eziguquguqukayo ezihlanganisa ivolumu yokuthenga/yokuthengisa, usayizi omaphakathi wokuthengiselana, izilinganiso zokuthenga/zokuthengisa, ukujula kwe-liquidity, nezimo ezibanzi zemakethe. Uma kuvela ukungalingani okukhulu kwesikhashana phakathi kokunikezwa nesidingo, isivikelo sokuthengisa singakhuphuka. Uma izimo sezibuyele esimeni esijwayelekile, uhlelo luphinda luhlole izimo njalo emahoreni amathathu futhi kancane kancane lubuyisela isivikelo ku-5% oyisisekelo. Ukubuyela okushesha kakhulu ezimweni eziyisisekelo phakathi namahora angu-24 kusadinga ukuthi izimo zokululama ezifanele zihlale zigcwaliseka ngokuqhubekayo. Ngakho-ke i-O2 ibhekana ne-liquidity nokungalingani kokunikezwa nesidingo. Ayiyona indlela enquma ukuthi intengo yemakethe ye-RM kufanele ibe yini, futhi akukho

siqinisekiso sentengo okufanele kufundwe kuyo. Umgomo oyisisekelo ulula: intengo ngumphumela; ukunikezwa nesidingo yimbangela. Uma kuba nokungalingani, isivikelo siyakhuphuka. Uma ukulingana kubuya, isivikelo sibuyela esimeni esijwayelekile.

Okwesine, i-SpartanOS isebenzisa i-AICS njengesendlalelo sezikhuthazo esiguquguqukayo. I-AICS isebenza ngokuhlola okuqhubekayo kwezinsuku ezingu-30: Amaphuzu = 0.2H + 0.4C + 0.2A + 0.2R. Ihlola izici zempilo yenethiwekhi ezihlanganisa isakhiwo sokumema, amakheli abanikazi, ukubamba iqhaza isikhathi eside, ukuhlala kwamalungu, umsebenzi, nomnikelo esizindeni. Ngenxa yalokho, ukufinyelela izinga elifanayo ngegama akusho ukuthi uzothola izikhuthazo ezifanayo ncamashi. Ukuthengisa okukhulu okuqhubekayo, ukuhlala okubuthakathaka kwamalungu, noma umnikelo wesikhathi eside owehlayo kungathinta ukuhlolwa kwe-AICS. Ngamazwi alula: i-AICS ihlola impilo yenethiwekhi; i-O2 iphatha ukulingana kwemakethe.

I-staking yesikhathi eside, amabhondi ezinsuku ezingu-360/540, ukunqwabelana kwenzalo, ukukhiya, ukushisa, nesidingo esikhulayo sezinhlelo zokusebenza bese kwengeza ezinye izingxenye zokunikezwa nesidingo. Imakethe ebanzi ye-DeFi isivele yabonisa ukuthi kungani lokhu kubalulekile. Amamodeli okumayina i-liquidity akhipha kakhulu angenakho ukusebenziseka okwanele, ukukhiya, noma isidingo sangempela ekugcineni angaguqula izikhuthazo zibe yingcindezi yokuthengisa. Ezinye izinhlelo ezinkulu zemali yedijithali ziphendule ezinkingeni ezifanayo zezomnotho ngokuhlanganisa ukukhiya, ukushiswa kwezinkokhelo, ukuthenga kabusha, noma isidingo sokusebenziseka.

I-SpartanOS ihlanganisa: ukukhululwa okulawulwayo + isidingo se-Turbo se-1:1 + ukukhiya kwesikhathi eside + ukushisa + i-AICS + ukulinganisa okuzivumelanisayo kwe-O2 + isidingo sezinhlelo zokusebenza. Ngakho-ke izilinganiso eziyinhloko zesikhathi eside akuzona nje ukuthi ingakanani i-RM ekhiqizwayo. Yilezi: isamba esisha se-RM, isamba esijikelezayo sangempela, isidingo sokuthenga se-Turbo se-1:1, isidingo sezinhlelo zokusebenza, i-RM ekhiywe isikhathi eside, i-RM eshisiwe, nokujula kwe-liquidity. Lezi zindlela zakhelwe ukuthuthukisa isakhiwo sokunikezwa nesidingo. Akusona isiqinisekiso sentengo yemakethe ye-RM. Ekugcineni, isidingo esiqhubekayo kufanele sikhule ngokwanele ukuze simunce ukunikezwa okuqhubekayo.

UMBUZO 4 KWENGU-7

Ikuphi ukugeleza kwemali kwangempela okudlula esizindeni, futhi yimaphi amaphesenti agcina eqongelelwa yiphrothokholi noma abanikazi bamathokheni?

I-SpartanOS ihlukanisa imiqondo emithathu okungafanele ididaniswe: ukugeleza kwemali eyinhloko, ukuqongelelwa yiphrothokholi, nokuqongelelwa kwenani kubanikazi bamathokheni.

I-SpartanOS ayichazwa ngokunembile njengemodeli elula yendabuko yokwabiwa kwezimali lapho, isibonelo, umsebenzisi efaka u-$100 bese u-X% omisiwe uba ngokuzenzakalela imali engenayo yephrothokholi kanti u-Y% uba ngokuzenzakalela imali engenayo yabanikazi bamathokheni. Indlela enembe kakhulu ukuhlaziya kokubili uhlangothi lwempahla nohlangothi lwesamba se-RM.

Uma imali eyinhloko ingena ku-SpartanOS, kuye ngomkhiqizo othile nemithetho yawo yezomnotho, leyo mali inikela esakhiweni sempahla yephrothokholi, kuhlanganise nemisebenzi efana ne-liquidity, i-treasury, i-POL, nezinye izimpahla zephrothokholi. Imikhiqizo ehlukene ingaba nezindlela ezihlukene zempahla. Ngakho-ke umkhiqizo othile ungahlaziywa ngokuthi ingakanani imali eyinhloko enikela ku-LP, ku-treasury/POL, noma kweminye imisebenzi yephrothokholi. Kodwa-ke, ukwabiwa kwempahla okuqondene nomkhiqizo othile akufanele kwethulwe njengamaphesenti okwabiwa kwemali engenayo asebenza kuso sonke isizinda se-SpartanOS.

Ngesikhathi esifanayo, iphrothokholi inquma ukukhiqizwa kwe-RM okuhambisanayo, ukukhiya, nezibopho zokukhululwa esikhathini esizayo ngokwemithetho yalowo mkhiqizo. Lokhu kusho ukuthi uma u-$100 engena kuphrothokholi, umbuzo wezomnotho ofanele awukhona kuphela ukuthi "U-$100 wabiwe kuphi?"

Uphinde ube ngowokuthi "Yiliphi inani lempahla yephrothokholi elidalwe yileyo $100, futhi yisiphi isamba se-RM esizayo esihambisanayo noma isibopho samathokheni esidalwe ngokumelene nayo?" Leyo RM akusho ukuthi ingena emakethe evulekile ngokushesha. Indlela yayo yezomnotho ingabandakanya: ukukhiya → ukukhululwa okulawulwayo → isidingo se-Turbo se-1:1 → ukuthenga kabusha → ukushisa → ukulinganisa okuzivumelanisayo kwe-O2.

Ngakho-ke, okubalulekile ngokwezomnotho akukhona nje ukuthi "Kwabiwa malini kule $100?" Umbuzo onomqondo kakhulu uthi: "Yiliphi inani lempahla yephrothokholi elidalwe yileyo $100, yisiphi isamba se-RM esizayo esidalwe ngokumelene nayo, leyo RM ingena kanjani futhi nini ekujikelezeni, futhi imakethe isimunca kanjani leso samba?"

Umfanekiso olula uthi: imali eyinhloko ingena kuphrothokholi → izimpahla zephrothokholi / i-treasury / i-POL / i-liquidity → ukukhiqizwa kwe-RM ngokwemithetho yephrothokholi → ukukhiywa kwe-RM nokukhululwa okulawulwayo → ukunikezwa nesidingo emakethe yesibili → i-O2 iqapha izimo zemakethe → izindlela zokuthenga kabusha / zokushisa / zokuvikela / ze-liquidity ziyasabela → uhlelo luya ekulinganeni okusha kokunikezwa nesidingo. Ngamazwi alula: i-SpartanOS ayihlukanisi nje izimali ezifakwayo; iphatha umnotho wamathokheni.

Ingxenye yesibili yombuzo, okugcina kuqongelelwa ngabanikazi bamathokheni, ibaluleke ngokufanayo. Izimpahla eziqoqwe ku-treasury/POL zimele ukuqongelelwa yiphrothokholi. I-liquidity inikela emnothweni wephrothokholi nasekujuleni kwemakethe. Akukho kukho okufanele kuchazwe ngokuzenzakalela njengemali engenayo yokheshi ekhokhelwa ngqo kubanikazi bamathokheni. Ngakho-ke: i-treasury ≠ isabelo senzuzo sabanikazi; i-liquidity ≠ isabelo senzuzo sabanikazi; ukukhuphuka kwentengo yethokheni ≠ ukwabiwa kokugeleza kwemali.

Njengamanje, ukuthola inani kwabanikazi be-RM ne-GD kufanele ikakhulukazi kuqondwe njengokuqongelelwa kwenani okungaqondile, hhayi njengemodeli yendabuko yesabelo senzuzo esimisiwe. Ku-RM, ukuqongelelwa kwenani kungenzeka ngesidingo sokuthenga emakethe se-Turbo se-1:1, ukukhiya, izinguquko esambeni esijikelezayo, ukushisa, ukusebenziseka ezinhlelweni zokusebenza, nezindlela zokuthenga kabusha/zokushisa ezixhumene nemali engenayo yezinhlelo zokusebenza lapho kusebenza khona. Ku-GD, ukuqongelelwa kwenani kuhlobene nesamba sayo esiphezulu esimisiwe esingu-390,000, amalungelo okubusa, nokwanda kokusebenziseka ezinhlelweni zokusebenza.

Isendlalelo esilandelayo esikhulu sezomnotho yimali engenayo yangaphandle yezinhlelo zokusebenza. Njengoba i-GoPlay, i-TempleRaid, nemidlalo yesikhathi esizayo, ama-DEX, izinhlelo zokusebenza eziwela amaketango, imikhiqizo ye-RWA, ingqalasizinda yokuhweba, namanye ama-DApp kudala umsebenzi wezomnotho wangaphandle wangempela, kuba nokwenzeka ukulandelela ukuthi ingakanani imali engenayo yezinhlelo zokusebenza engena ku-treasury, ingakanani eqinisa i-liquidity, ingakanani esetshenziselwa ukuthenga kabusha/ukushisa i-RM, nokuthi ikhona yini ingxenye eyabelwa ngokucacile abanikazi. Ngaphandle uma i-smart contract noma umthetho ocacile wephrothokholi uthi u-X% wemali engenayo yephrothokholi wabelwa ngqo abanikazi be-RM/GD, izimpahla zephrothokholi akufanele zethulwe njengokugeleza kwemali okuqondile kwabanikazi.

Ngakho-ke, njengamanje ayikho ifomula enembile esebenza yonke indawo efana nethi "$100 efakiwe = X% iya ngqo kubanikazi be-RM/GD." Uhlaka lokuhlolisisa olunomqondo kakhulu luthi: kuyo yonke iyunithi yemali eyinhloko engena ku-SpartanOS, yiziphi izimpahla zephrothokholi ezidalwayo noma ezitholwayo, yisiphi isamba se-RM esihambisanayo noma isibopho samathokheni esizayo esikhiqizwayo, leyo RM ikhululelwa kanjani ekujikelezeni, futhi yiziphi izindlela ezilinganisa leso samba nesidingo semakethe sangempela ne-liquidity? Bese: ingakanani imali engenayo yangaphandle yezinhlelo zokusebenza egcina ithathwa yi-treasury, yi-liquidity, wukuthenga kabusha/ukushisa, noma wukwabiwa ngqo kwabanikazi?

Le mihlukano ibalulekile: ukugeleza kwemali eyinhloko ≠ imali engenayo; izimpahla zephrothokholi ≠ isabelo senzuzo sabanikazi; ukuthenga kabusha/ukushisa ≠ ukwabiwa kwemali okuqondile.

UMBUZO 5 KWENGU-7

Uyini umsele wokuzivikela we-SpartanOS ozalelwe emalini yedijithali?

Umsele wokuzivikela we-SpartanOS akuyona i-RM yodwa, i-GD yodwa, i-O2 yodwa, noma i-smart contract eyodwa. Amathokheni angakopishwa. Ama-smart contract angakopishwa. Amapharamitha omnotho wamathokheni nawo angaphindwa. Umsele wokuzivikela ongaba khona uvela emthelelweni wenethiwekhi odalwa lapho izendlalelo eziningi zezomnotho, zezinhlelo zokusebenza, zengqalasizinda, ze-liquidity, zabathuthukisi, nezomphakathi zisebenza ndawonye.

Isendlalelo sokuqala yisendlalelo sezomnotho: RM + GD + O2 + Turbo ye-1:1 + AICS + Stable Vault + i-staking yesikhathi eside + amabhondi e-liquidity esikhathi eside + amandla + ukushisa + ukunqwabelana kwenzalo. Lezi zindlela zibhekana nezingxenye ezahlukene zohlelo lwezomnotho: ukunikezwa, isidingo, i-liquidity, ukubamba iqhaza isikhathi eside, nempilo yenethiwekhi.

Isendlalelo sesibili yisendlalelo sezinhlelo zokusebenza. I-GoPlay, i-TempleRaid, nezinhlelo zokusebenza zesikhathi esizayo zihloselwe ukusa i-RM ne-GD ngale komnotho wangaphakathi wephrothokholi zingene ekusebenzisekeni kwangempela ezinhlelweni zokusebenza. Njengoba izinhlelo zokusebenza zidala abasebenzisi, ukuthengiselana, nemali engenayo yangaphandle, umnotho wezinhlelo zokusebenza ungaqala ukubuyisela umsebenzi wezomnotho esizindeni se-RM/GD.

Isendlalelo sesithathu yisendlalelo se-AI / sezinhloso / sokwenziwa. Ingqalasizinda yezinhloso efana ne-dappOS imele indlela ebalulekile lapha. Ukubaluleka kwayo akukhona nje ukunamathisela ilebula ethi "AI" ku-Web3. Inhloso ukunciphisa ubunzima bokuxhumana neketango lamabhulokhi. Umsebenzisi uveza inhloso; ingqalasizinda efanele ingasiza ngokuqondisa, ukwenziwa, nokuxhumana ne-DApp, kanti ubunikazi bokugcina bempahla nokuphothulwa kubuyela esendlalelweni seketango lamabhulokhi. Ngamazwi alula: i-AI iphatha ubuhlakani nosizo lokwenziwa; iketango lamabhulokhi linikeza isimo esithembekile, izimpahla, nokuphothulwa kwenani.

Isendlalelo sesine yingqalasizinda yeketango lamabhulokhi. I-SpartanOS isebenzisa i-AnubisChain ukwenza ama-smart contract nokuphothula izimpahla, kanti isizinda esibanzi sixhumana nengqalasizinda ezikhwameni, kuma-bridge, kuma-DEX, kuma-explorer, engqalasizindeni yezinkomba/yedatha, nasezinhlelweni eziwela amaketango kuhlanganise nezindawo ezifana ne-The Graph, i-Blockscout, ne-LayerZero.

Isendlalelo sesihlanu wukukhula kwesizinda. Kusukela ku-Q3 kuqhubeke, uhlelo lwendlela lwesizinda luhlanganisa ukuthuthukiswa okuqhubekayo kulezi: ingqalasizinda yokuwela amaketango ye-LayerZero + OFT, ukuthuthukiswa kwe-explorer, i-RocketSwap V3, i-Guard multisig, i-NFT + DID, i-AI Meme / AI Agent, ukuguqula i-RWA ibe amathokheni, inkundla yokuhweba ngezinkontileka engalawulwa yisikhungo esisodwa, nomshwalense wokuhweba ngezinkontileka. Lokhu akufanele konke kwethulwe njengemikhiqizo esivele isebenza ekhiqiza imali engenayo. Imikhiqizo esebenzayo kufanele ihlaziywe ngokusetshenziswa komkhiqizo nedatha ye-on-chain. Ukuxhumanisa okusathuthukiswa kufanele kuhlaziywe ngenqubekela phambili yezobuchwepheshe nezimemezelo ezisemthethweni. Imikhiqizo yesikhathi esizayo kufanele ihlolwe ngezinkontileka, ukuthengiselana, abasebenzisi, nemali engenayo uma isisetshenziswe.

Amanethiwekhi amakhulu emali yedijithali abonisa ukuthi kungani lo mehluko ubalulekile. Umsele wokuzivikela we-Ethereum awukhona nje ikhodi yomthombo ye-EVM. Umthelela wayo wenethiwekhi uvela kubathuthukisi, ku-liquidity, ezikhwameni, ezinhlelweni zokusebenza, engqalasizindeni, ezindinganisweni, nakubasebenzisi abaxhumana phakathi kwabo. Ngokufanayo, ifomula ye-AMM uqobo lwayo ingakopishwa; ukwakha kabusha i-liquidity, ukuxhumanisa, abasebenzisi, amathuluzi abathuthukisi, nemithelela yenethiwekhi ezungeze i-DEX esikhulile kunzima kakhulu.

Ngakho-ke inethiwekhi i-SpartanOS ezama ukuyakha ithi: umnotho wamathokheni + i-liquidity + AI/izinhloso + izinhlelo zokusebenza + ingqalasizinda yeketango lamabhulokhi + abathuthukisi + abasebenzisi + umphakathi womhlaba wonke. Kungaba ngaphambi kwesikhathi ukuchaza lokhu

njengomsele wokuzivikela ophelele ongenakukopishwa. Incazelo enembe kakhulu ukuthi i-SpartanOS yakha umsele wokuzivikela wenethiwekhi, ukuqina kwawo okufanele ekugcineni kufakazelwe ngokujula kwe-liquidity, abasebenzisi abasebenzayo, ukwamukelwa kwezinhlelo zokusebenza, umsebenzi wabathuthukisi, imali engenayo yangaphandle, nokuxhumanisa phakathi kwezizinda.

UMBUZO 6 KWENGU-7

Yini ncamashi ehlolwa on-chain, futhi yini emane ishiwo yingqalasizinda ye-AI esebenza off-chain?

I-SpartanOS yenza umehluko ocacile phakathi kwesimo esise-on-chain nokubala okwenziwa off-chain.

Ulwazi olungahlolwa ngokuzimela on-chain luhlanganisa: amakheli ezikhwama, izinkontileka zamathokheni, ukudluliselwa kwe-RM/GD, ama-swap, izinguquko ku-liquidity, ukushisa, ukuxhumana nama-smart contract, ama-hash okuthengiselana, nokuphothulwa kokugcina kwezimpahla. La maqiniso awadingi ukuthi umsebenzisi athembe lokho okushiwo yisixhumi esibonakalayo se-SpartanOS. Angahlolwa ngokuzimela ngokuqhathaniswa nesimo seketango lamabhulokhi esifanele ngama-explorer futhi, lapho kusekelwa khona, ngengqalasizinda yedatha/yezinkomba yeketango lamabhulokhi yezinkampani zangaphandle. Lokho kungesinye sezici eziyisisekelo zeketango lamabhulokhi: abasebenzisi kufanele bakwazi ukuhlola ngokuzimela izimo ezibalulekile zezimpahla nezokuthengiselana kunokuba bathembele kuphela esixhumini esibonakalayo sephrothokholi uqobo.

Kodwa-ke, akuzona zonke izingxenye zohlelo eziba on-chain ngokuzenzakalela. Izingxenye ezifana nezingxenye zokubalwa kwamaphuzu e-AICS, ukuhunyushwa kwezinhloso, ukuhlaziywa kwedatha yangaphandle, izicelo ze-API, ukwenza izinqumo kwabenzeli, nokunye ukubala okwenziwa off-chain kufanele kuphathwe ngokwehlukana. Uma uhlelo lwe-off-chain lwenza isibalo bese luthumela ukuthengiselana eketangweni lamabhulokhi, iketango lamabhulokhi lingafakazela ukuthi ukuthengiselana kokugcina kwenzekile. Alifakazeli ngokuzenzakalela ukuthi konke ukubala kwe-off-chain okwandulelayo bekulungile. Ngakho-ke: umphumela on-chain ≠ konke ukubala on-chain.

Umngcele wokwethemba uchazwa ngokunembe kakhulu ngokuthi: i-AI / ingqalasizinda ye-off-chain iphatha ubuhlakani, ukuhlaziya, nomqondo wokwenziwa; iketango lamabhulokhi lihlola isimo esithembekile, izimpahla, ukuthengiselana, nokuphothulwa kokugcina kwenani.

Uma ukubala kwe-off-chain uqobo kudinga ukuhloleka ngokubethela, kungadingeka obunye ubuchwepheshe, kuye ngokuthi kusetshenziswa kanjani, kuhlanganise nezindlela zokubala ezisobala, ama-oracle, ama-TEE, ubufakazi be-ZK, amasiginesha okubethela, amanethiwekhi abahloli, noma ezinye izinhlelo zokubala okuhlolekayo.

Ngakho-ke sihlukanisa phakathi kwamaqiniso e-on-chain, angahlolwa ngokuzimela ngesimo seketango lamabhulokhi, nokubala kwe-off-chain, okudinga indlela yakho yokuhlola. Umphumela obhalwe eketangweni lamabhulokhi akufanele wethulwe njengobufakazi bokuthi konke ukubala kwe-off-chain kwenziwe noma kwahlolwa on-chain.

UMBUZO 7 KWENGU-7

I-SpartanOS ifakazela kanjani ukuthi umenzeli we-AI uyenzile ngempela insizakalo athi uyenzile?

Kunamazinga amabili ahlukene obufakazi: ukuhlolwa komphumela wokwenziwa nokuhlolwa kokubala.

Uma umenzeli ethi uqedile ukudlulisela, i-swap, uku-stake, noma ukuxhumana ne-smart contract, umsebenzisi akufanele aphoqeleke ukuthemba umlayezo wesixhumi esibonakalayo othi "Kuqediwe."

Ubufakazi obuyinhloko kufanele kube yiketango lamabhulokhi. Umsebenzisi kufanele akwazi ukuhlola i-hash yokuthengiselana, ukubizwa kwenkontileka, izimpahla ezingenayo, izimpahla eziphumayo, izinguquko esimweni sesikhwama, nokuphothulwa kokugcina.

Isibonelo, uma umenzeli ethi "Ngikushintshele Impahla A yaba Impahla B," ubufakazi obufanele akusona isitatimende somenzeli uqobo. Umsebenzisi kufanele akwazi ukuhlola ukuthi ukuthengiselana kukhona ngempela yini, iyiphi i-smart contract ebiziwe, ingakanani Impahla A ephume esikhwameni, ingakanani Impahla B etholiwe, nokuthi ukuthengiselana kuphothulwe ngempumelelo yini. Lokho wukuhlolwa komphumela wokwenziwa. Iketango lamabhulokhi lisebenza kahle kakhulu ekufakazeleni ukuthi isenzo esihlobene nempahla senzeke ngempela.

Kodwa-ke, i-hash yokuthengiselana ayifakazeli ngokuzenzakalela ukuthi kungani umenzeli enze isinqumo esithile, ukuthi konke okufakiwe bekunembile yini, noma ukuthi zonke izinyathelo zangaphakathi zokucabanga bezilungile yini. Leyo yinkinga ehlukile: ukuhlolwa kokubala. Uma inhloso kungukuhlola ngokubethela ukubala kwangaphakathi komenzeli, kungadingeka ezinye izindlela, ezifana nama-TEE, ubufakazi be-ZK, izinhlelo ze-oracle, amanethiwekhi abahloli, amasiginesha okubethela, noma ezinye izinhlobo zokubala okuhlolekayo.

Ngakho-ke asiyenzi inkulumo engalungile ngokobuchwepheshe ethi "ngoba ukuthengiselana kuse-on-chain, konke ukubala kwe-AI okungemuva kwakho kuthembekile ngokuzenzakalela." Imodeli enembe kakhulu ithi: i-AI iqonda inhloso, yenza ukuhlaziya, futhi isize ekwenziweni; iketango lamabhulokhi lihlola isimo sempahla nokwenziwa kokugcina.

Ingqalasizinda yezinhloso efana ne-dappOS ibonisa indlela ebanzi: abasebenzisi akudingeki ukuthi baqonde ngokwabo wonke umsebenzi weketango lamabhulokhi obandakanyekayo ekufezeni inhloso. Isendlalelo sezinhloso/sokwenziwa singenza kube lula ukuqondisa nokwenziwa, kanti imiphumela ebalulekile yezimpahla kufanele isabuyela ekuphothulweni okuhlolekayo eketangweni lamabhulokhi.

Umgomo uqondile: ungathembeli kuphela kumenzeli othi "Ngiwuqedile umsebenzi." Hlola ukuthi iketango lamabhulokhi liyafakazela yini ukuthi umsebenzi uqedwe ngempela. Uma imfuneko idlulela phambili, ukufakazela ukuthi kungani umenzeli enze isinqumo noma ukuthi ukubala kwakhe kwangaphakathi bekulungile, khona-ke lokho kudinga isendlalelo esihlukile sokubethela noma sokubala okuhlolekayo, futhi kufanele kuhlaziywe ngokobuchwepheshe bokuhlola obusetshenziswa ngempela.

UNGAZISEBENZISA KANJANI

Caphuna impendulo iyonke kunomusho owodwa wayo. Akukho siqinisekiso sentengo esinikezwa yizindlela zokusebenza, i-treasury akusona isabelo senzuzo, ukuthengiselana eketangweni akufakazeli ukubala okungemuva kwakho, izinto ezisohlelweni lwendlela akuyona imikhiqizo esebenzayo, futhi iziphindaphindi zamandla yizibalo eziguquguqukayo ezifundwa ku-dApp ngalolo suku. Uma ushiya leyo mingcele, awusayicaphuni iphrojekthi.

06

INGXENYE VI

Umlayezo oya kubalingani bamazwe ngamazwe, namabhondi

Imibhalo emibili evela ephrojekthini, ikhiqizwe kabusha njengoba inikeziwe. Okokuqala, umlayezo u-Harry awuthumela kuwo wonke umlingani omusha wamazwe ngamazwe ngomhla ka-26 Septhemba 2026: ukuthi i-Spartan OS yafinyelela kanjani ku-35 wezigidi ze-USDT, ukwehla kwemakethe nokululama, nesiko imiphakathi yokuqala elathatha kukho. Bese kuba imibhalo yebhondi yangomhla ka-25 Septhemba: isiqondiso sokuqala ngebhondi kulesi sigaba, lokho ama-USDT angu-1,000 akuthenga ngalolo suku, ukukhululwa kwansuku zonke, isaphulelo esishintshayo, nebhondi lezinsuku ezingu-540 uma liqhathaniswa ne-staking yezinsuku ezingu-540.

Kwamukelwe ngo-26 Septhemba 2026 · kusuka ku-Harry, Spartan OS · kudluliselwe esiteshini se-Phalanx · kukhiqizwe kabusha njengoba kunikeziwe, izihloko zezigaba zigcinwe

KUSUKELA EKULULAMENI OKUMISE OKWE-U KUYA OHLELWENI LWEMVELO LOMHLABA

Umlayezo oya kuwo wonke umlingani womphakathi womhlaba ojoyina i-SpartanOS

Namuhla, abalingani abaningi ngokwengeziwe abavela eNdiya, eMpumalanga Ephakathi, eNingizimu-mpumalanga ye-Asia, nakwezinye izingxenye zomhlaba bajoyina i-SpartanOS.

Emakethe yamazwe ngamazwe, okubonayo yi-SpartanOS yanamuhla:

Isisekelo semali esiphelele esingaphezu kuka-35 wezigidi ze-USDT, umphakathi womhlaba okhulayo, uhlelo lwemvelo olukhulayo, kanye nemakethe engena esigabeni esisha sentuthuko yamazwe ngamazwe.

Kodwa ngaphambi kokuthi sikhulume ngezindlela zokusebenza, inzuzo, noma intengo, kukhona okubaluleke nakakhulu:

Udinga ukuqonda ukuthi sifike kanjani lapha.

Ngoba ama-USDT angu-35 wezigidi esiwabona namuhla awakhiwanga ngobusuku obubodwa.

Futhi ukuvumelana esinakho namuhla akudalwanga ukwenyuka kwentengo okukodwa.

1. KUSUKELA NGO-8 EPHRELI KUZE KUBE NAMUHLA — UHAMBO LWETHU ALUKAZE LUBE UMUGQA OQONDILE

Kusukela ekwethulweni kwe-Anubis Chain ngo-8 Ephreli, kuya ekwethulweni okusemthethweni kwe-SpartanOS emakethe ngo-16 Juni, futhi manje kuya esisekelweni semali esiphelele esedlula ama-USDT angu-35 wezigidi futhi esiqhubeka sibheke esigabeni esibalulekile esilandelayo—

Sibhekane nomjikelezo wemakethe wangempela futhi ophelele.

Sibhekane nokukhula okusheshayo.

Sibhekane nokulungiswa kwentengo.

Sibone izikhathi zentshiseko enkulu kakhulu emakethe.

Futhi siphinde sabhekana nezikhathi lapho ukuzethemba kwavivinywa khona.

Okubaluleke kakhulu, sibhekane nokululama kwemakethe kwangempela okumise okwe-U.

Yingakho imiphakathi yokuqala iqonda igama elithi "ukuvumelana" ngendlela ehlukile kunomuntu osanda kungena ohlelweni lwemvelo.

Ngoba safunda isifundo esisodwa esibalulekile:

Ukuvivinywa kwangempela kohlelo lwemvelo akukhona ukuthi bangaki abantu abalukholwayo lapho imakethe ikhuphuka. Ukuvivinywa kwangempela ukuthi bangaki abantu abasazimisele ukwakha lapho imakethe iba nzima.

Kuwo wonke umjikelezo wemakethe, kancane kancane sakha isiko lomphakathi elikhona namuhla.

2. LAPHO INTENGO IKHUPHUKA, SIFUNDA UKUZIQEQESHA. LAPHO INTENGO YEHLA, SIYAKHA.

Lokhu kungokuhlangenwe nakho kokuqala esifuna ukwabelana ngakho nemiphakathi yethu yamazwe ngamazwe.

Lapho i-RM ikhuphuka ngokushesha futhi umuzwa wemakethe uqine kakhulu, sabona into ebalulekile:

Uma wonke umuntu egxila kuphela enzuzweni yesikhashana, ukuthengisa okugxilile, okukhulu, nokungahlelekile kungadala ingcindezi engadingekile ku-liquidity nasemuzweni wemakethe—ngisho noma iphrothokholi uqobo lwayo isaphilile.

Yingakho imiphakathi yethu yaqala ukukhuthaza:

Ukuhweba okunengqondo. Ukuhweba okusabalele. Ukuziphatha emakethe okuhlelekile.

Lokhu akusho ukuthi abantu bayenqatshelwa ukuthengisa.

Futhi impela akusho ukuthi noma ubani unelungelo lokulawula impahla yomunye umuntu.

Kusho ukuqonda umgomo owodwa olula:

Emakethe ye-liquidity eyabelwana ngayo, izenzo zomuntu ngamunye zingathinta uhlelo lwemvelo olubanzi.

Futhi lapho imakethe ingena ekulungisweni futhi izintengo zehla, asizange siyeke ukwakha.

Saqhubeka nokuthuthukisa umphakathi.

Saqhubeka nemfundo yemakethe.

Saqhubeka nemicimbi nokwandiswa kohlelo lwemvelo.

Sangenisa ababambiqhaza abasha futhi sakhuthaza ukuziphatha okunengqondo kakhulu emakethe ukuze kuncishiswe ingcindezi yemakethe egxilile.

Ekugcineni, sabhekana nokululama okumise okwe-U.

Kulokho okuhlangenwe nakho, sakha ifilosofi elula kakhulu kodwa ebalulekile:

Lapho izintengo ziphezulu, ziqeqeshe. Lapho izintengo ziphansi, qhubeka wakhe.

Ngesikhathi sokwenyuka kwentengo, lawula imizwa. Ngesikhathi sokulungiswa kwemakethe, qinisa ukuzethemba.

Lena akuyona imithetho ebhalwe ku-smart contract.

Yizifundo ezifundwe ngokuhlangenwe nakho kwangempela emakethe.

3. UMA SINE-O2, KUNGANI SISABEKA UBUBALULEKO OBUNGAKA KUBANTU?

I-DeFi isinikeze imboni izifundo eziningi ezibalulekile.

Amaphrothokholi esizukulwane sangaphambili, kuhlanganise ne-Olympus DAO, akhombisa amandla okuklanywa kwezindlela zomnotho.

Kodwa aphinde afundisa imboni into ebaluleke ngokufanayo:

Izindlela zomnotho zodwa azikwazi ukuxazulula zonke izinkinga zemakethe.

Ngakho-ke i-SpartanOS ayikopishi nje amamodeli e-DeFi angaphambili.

Sakha iphrothokholi yokulinganisa ezivumelanisayo i-O2.

I-O2 ibheka izimo zemakethe kuhlanganise nokunikezwa nesidingo, i-TWAP, ukusebenza okumaphakathi kokuthengiselana, izilinganiso zokuthenga/zokuthengisa, nokujula kwe-liquidity.

Lapho imakethe ingalingani, izindlela zokuvikela zingaqaliswa.

Lapho izimo zibuyela esimweni esijwayelekile, uhlelo luphinda luhlole idatha futhi lulungise ngokufanele.

Yingakho sivame ukuthi:

Intengo ingumphumela. Ukunikezwa nesidingo kuyimbangela. Lapho kuvela ukungalingani, ukuvikela kuyaqala. Lapho ukulingana kubuya, kulandela ukulungiswa.

Kodwa ngemva kokubhekana nemijikelezo yemakethe yangempela, siqonda okuthile ngokucacile nakakhulu:

Izindlela zokusebenza zingalungisa amapharamitha. Azikwazi ukulawula ukuziphatha kwabantu.

Ama-smart contract angasebenzisa imithetho.

I-O2 ingasabela kudatha yemakethe.

I-AICS ingahlola impilo yenethiwekhi.

Kodwa ayikho ikhodi engaqinisekisa ukuthi abantu ngeke babe nobugovu ngesikhathi sokwenyuka kwentengo.

Futhi ayikho indlela yokubala engaqinisekisa ukuthi abantu ngeke besabe ngesikhathi sokulungiswa kwemakethe.

Yingakho i-SpartanOS inesinye isisekelo esibaluleke ngokufanayo:

UKUBUSA KOMPHAKATHI.

4. IZIVUMELWANO ZOMPHAKATHI AZIMAYELANA NOKUVIMBELA — ZIMAYELANA NOKUZIBUSA

Lokhu kubaluleke kakhulu ukuthi imiphakathi yethu emisha yamazwe ngamazwe ikuqonde.

Lapho sikhuluma ngezivumelwano zomphakathi, asisho ukuthi:

"Awuvunyelwe ukuthengisa."

Impahla ye-on-chain ingeyabanikazi bayo.

Wonke umbambiqhaza unelungelo lokuzenzela izinqumo zakhe.

Esifuna ukukwakha yisiko lomphakathi elivuthiwe elingaphethwe yisikhungo esisodwa:

Unenkululeko yokukhetha, ngesikhathi esifanayo uqonda ukuthi ukukhetha kwakho kungayithinta kanjani imakethe ebanzi.

Yingakho imiphakathi yethu ixoxa ngezimo zemakethe.

Sifundisa ababambiqhaza abasha.

Sikhuthaza abantu ukuthi bagweme ukuziphatha emakethe okugxilile, okusezingeni elikhulu, nokuqhutshwa yimizwa.

Sikhuthaza ababambiqhaza besikhathi eside ukuthi banikele kakhulu ekuthuthukisweni kohlelo lwemvelo.

Futhi ngesikhathi sezimo ezinzima zemakethe, sisebenza ndawonye ukuthola izixazululo kunokuba sandise ukwesaba.

Yilokhu esikushoyo ngokuthi:

Ukubusa komphakathi.

Ukungaphathwa yisikhungo esisodwa kwangempela akufanele kusho ukungabikho kokuhleleka.

Futhi inkululeko akufanele isho ukungabikho komthwalo wemfanelo.

Iphrothokholi ayenzeli abasebenzisi izinqumo. Nomphakathi awubenzeli abasebenzisi izinqumo.

Kodwa umphakathi ovuthiwe ungasiza ababambiqhaza baqonde imakethe kangcono ukuze benze izinqumo ezinolwazi olwengeziwe, ezinomthwalo wemfanelo, nezesikhathi eside.

Lesi ngesinye sezifundo ezibaluleke kakhulu esizifundile.

5. KUNGANI SABELANA NGALO MLANDO NEMAKETHE YOMHLABA MANJE?

Ngoba i-SpartanOS isingene esigabeni esisha.

Esikhathini esedlule, ingxenye enkulu yesisekelo yakhiwa yimiphakathi yethu yokuqala.

Namuhla, iNdiya, iMpumalanga Ephakathi, iNingizimu-mpumalanga ye-Asia, nezinye izimakethe zamazwe ngamazwe ziyajoyina.

Ngesikhathi esifanayo, ukuthuthukiswa kohlelo lwemvelo kuyaqhubeka kuya phambili.

Njengoba kungena izinhlelo zokusebenza eziningi zohlelo lwemvelo, abalingani, imali evela ngaphandle, i-liquidity, nabasebenzisi bomhlaba, ubukhulu bemakethe buzohluka kakhulu kunalokho obekuyikho ngaphambili.

U-35 wezigidi akusona isiphetho.

Siqhubeka sibheke ezigabeni ezintsha ezibalulekile ze-liquidity nezohlelo lwemvelo:

35M → 36M → 50M → Uhlelo lwemvelo lomhlaba olukhudlwana

Lezi zinombolo zimele imigomo yentuthuko; aziyona iziqinisekiso zenzuzo noma zezintengo ze-RM zesikhathi esizayo.

Intengo yemakethe ye-RM izoqhubeka inqunywa ukunikezwa nesidingo kwangempela, izimo ze-liquidity, nokuthuthukiswa kohlelo lwemvelo.

Kodwa umgomo owodwa uzohlala ungashintshile:

Uma uhlelo lwemvelo lukhula kakhulu, ukuvumelana kuba kubaluleke nakakhulu.

6. NJENGOBA SIBHEKE KU-50 WEZIGIDI, OKUFANELE KUGUQUKE AKUYONA IMAKETHE KUPHELA — KODWA UKUVUMELANA KWETHU

Lapho uhlelo lwemvelo luncane, imiphakathi embalwa eyinhloko ingakwazi ukufeza izinto eziningi.

Ku-35 wezigidi, kufanele kubambe iqhaza imiphakathi eminingi.

Futhi uma uhlelo lwemvelo ekugcineni lukhula luya ku-50 wezigidi, ku-100 wezigidi, noma ezingeni elikhulu nakakhulu, ngeke sisabhekana nemakethe yesifunda.

Sizobe sibhekana nohlelo lwemvelo lomhlaba wonke ngempela.

Ngaleso sikhathi, ukuziphatha kwemakethe eShayina, umsebenzi womphakathi eNdiya, ukwanda kohlelo lwemvelo eMpumalanga Ephakathi, nokukhula eNingizimu-mpumalanga ye-Asia konke kungaba yizingxenye ezixhumene zemakethe eyodwa yomhlaba.

Ngakho-ke, akuyona iphrothokholi kuphela okufanele iguquke.

Ukuvumelana kwethu komhlaba kufanele kuguquke kanye nayo.

Yingakho impela namuhla sabelana nabalingani bethu bamazwe ngamazwe ngokuhlangenwe nakho kwemiphakathi yokuqala.

Hhayi ngoba sifuna uphinde konke esabhekana nakho.

Kuphambene nalokho.

Sifuna imakethe yomhlaba izuze ezifundweni esesizifundile.

7. OKWEDLULE KWAKUMAYELANA NEMIPHAKATHI YOKUQALA YAKHA UKUVUMELANA. IKUSASA LIMAYELANA NOMHLABA WAKHA UHLELO LWEMVELO NDAWONYE.

Kusukela namuhla kuya phambili, indaba ye-SpartanOS iyashintsha.

Esikhathini esedlule, sasikhuluma ngokuthi imakethe eyodwa ingakhula kanjani.

Esikhathini esizayo, umbuzo uba yilo:

Uhlelo lwemvelo lomhlaba lungakhula kanjani ndawonye?

Ikusasa le-SpartanOS akusilo laseShayina.

Akusilo laseNdiya.

Akusilo laseDubai.

Futhi akusilo lanoma yimuphi umphakathi owodwa.

Lingelabo bonke abanikela ngempela ekwakheni uhlelo lwemvelo.

Yingakho isiko lomhlaba esifuna ukulisungula lilula:

Lapho imakethe ikhuphuka — hlala unengqondo. Lapho imakethe izilungisa — ungethuki. Hlonipha ukukhetha komuntu ngamunye — futhi uhloniphe imakethe eyabelwana ngayo. Naka intengo — kodwa unake i-liquidity nakakhulu. Naka inzuzo — kodwa unake nohlelo lwemvelo. Cabanga nganamuhla — kodwa wakhele ikusasa.

KUSUKELA EKUVUMELANENI KWESIFUNDA KUYA EKUVUMELANENI KOMHLABA

Ezinyangeni ezimbalwa ezedlule, okuhlangenwe nakho kwangempela emakethe kusifundise into ebaluleke kakhulu:

Izindlela zokusebenza ezingenakho ukuvumelana azanele.

Futhi ngokufanayo:

Ukuvumelana okungenazo izindlela zokusebenza eziqinile akwanele.

Into i-SpartanOS eyakhayo ekugcineni iyinhlanganisela yalokhu:

O2 + AICS + UKUTHUTHUKISWA KOHLELO LWEMVELO + UKUBUSA KOMPHAKATHI + UKUVUMELANA KOMHLABA

I-O2 igcina ukulingana okuzivumelanisayo.

I-AICS ihlola impilo yohlelo lwemvelo.

Uhlelo lwemvelo ludala isidingo nokusetshenziswa kwesikhathi eside.

Futhi umphakathi womhlaba uxhumanisa konke ndawonye.

Izindlela zokusebenza zingasisiza ukuthi sidlule ekuguquguqukeni kwentengo. Kodwa abantu yibona abavumela uhlelo lwemvelo ukuthi luphile futhi lukhule kuyo yonke imijikelezo yemakethe.

Kusukela ngo-8 Ephreli kuya ku-16 Juni.

Kusukela ezinseleleni zethu zokuqala zemakethe kuya ekululameni okumise okwe-U.

Kusukela emakethe yokuqala kuya ngaphezu kuka-35 wezigidi ze-USDT namuhla.

Futhi kusukela ku-35 wezigidi kubheke ku-50 wezigidi nasohlelweni lwemvelo lomhlaba olukhulu kakhulu—

Esikuqongelele akuyona i-liquidity kuphela.

Okubaluleke nakakhulu:

Siqongelele okuhlangenwe nakho kwangempela ekuphatheni izimo zemakethe, ekusabeleni ekuguquguqukeni kwentengo, nasekwakheni ukuvumelana kwesikhathi eside.

Manje, lokho okuhlangenwe nakho kudluliselwa kusuka emiphakathini yokuqala kuya emakethe yomhlaba.

Isigaba esilandelayo asimayelana nemakethe eyodwa ehola enye.

Simayelana nama-Spartan avela emazweni, ezilimini, nasemiphakathini ehlukene akha ndawonye, avikela ndawonye, futhi abona ukukhula kwalolu hlelo lwemvelo ndawonye.

Iphrothokholi inquma ukuthi sisebenza kanjani. Uhlelo lwemvelo lunquma ukuthi singakha inani elingakanani. Futhi ukuvumelana komhlaba kunquma ukuthi singaya kude kangakanani.

SPARTAN OS

KUSUKELA KUPHROTHOKHOLI KUYA OHLELWENI LWEMVELO. KUSUKELA EMPHAKATHINI KUYA EMHLABENI. KUSUKELA EKUVUMELANENI KUYA EKUSASA.

IMIGQA EYISITHUPHA

Lapho imakethe ikhuphuka, hlala unengqondo. Lapho izilungisa, ungethuki. Hlonipha ukukhetha komuntu ngamunye futhi uhloniphe imakethe eyabelwana ngayo. Naka intengo, unake i-liquidity nakakhulu. Naka inzuzo, unake nohlelo lwemvelo. Cabanga nganamuhla, wakhele ikusasa. Kuyimikhuba ngamazwi ephrojekthi, akusoze kwaba yimithetho esenkontilekeni: akekho onqatshelwa ukuthengisa, akekho ongalawula impahla yomunye umuntu.

UNGAKUSHO KANJANI

Xoxa umlando ngokulandelana futhi ugcine ukwehla kwemakethe kuwo. Caphuna izinombolo nezincazelo zazo: ama-USDT angu-35 wezigidi yisamba esishiwoyo ngomhla ka-26 Septhemba; u-36M no-50M yimigomo yentuthuko futhi umbhalo uthi aziyona iziqinisekiso zenzuzo noma zentengo ye-RM. Sebenzisa umlayezo ukuphendula ukuthi kungani iphrojekthi ikhuluma ngabantu kanti inayo i-O^2; ungawusebenzisi ukuphendula ukuthi umuntu uzozuza malini.

Kwamukelwe ngo-25 Septhemba 2026 · iqembu lamazwe ngamazwe le-Spartan OS, iqembu elisebenzayo · kukhiqizwe kabusha njengoba kunikeziwe, kwengezwe izihloko

Lapho ebuzwa ukuthi imakethe yamazwe ngamazwe kufanele ilandele i-staking evamile noma amabhondi, u-Harry waphendula: amabhondi, kulesi sigaba; ibhondi linesaphulelo, i-staking izuza inani elikhulu lezinhlamvu zemali. Umyalelo odluliselwe eqenjini lamazwe ngamazwe ngalo lelo hora: tshela imakethe yamazwe ngamazwe ukuthi ithenge ibhondi kulesi sigaba esikhundleni se-staking evamile. Imibhalo emine eyalandela:

Ukuqhathanisa ukuthenga i-RM ngama-USDT angu-1000

Intengo yemakethe yamanje: $30.8081

Ukuthenga ngqo ngentengo yemakethe ngama-USDT angu-1,000: ≈ 32.459 RM

Ibhondi le-LP lezinsuku ezingu-360. Intengo yebhondi: $27.5301. Isaphulelo uma kuqhathaniswa nentengo yemakethe: ≈ 10.64% ngaphansi. I-RM etholakala ngama-USDT angu-1,000: ≈ 36.324 RM. I-RM eyengeziwe uma kuqhathaniswa nokuthenga ngqo emakethe: ≈ +3.865 RM

Ibhondi le-LP lezinsuku ezingu-540. Intengo yebhondi: $26.2535. Isaphulelo uma kuqhathaniswa nentengo yemakethe: ≈ 14.79% ngaphansi. I-RM etholakala ngama-USDT angu-1,000: ≈ 38.090 RM. I-RM eyengeziwe uma kuqhathaniswa nokuthenga ngqo emakethe: ≈ +5.631 RM

Ingabe inzuzo ikhokhwa kuphela ngemva kwezinsuku ezingu-360 noma ezingu-540, noma nsuku zonke?

Kuwo womabili amabhondi e-LP ezinsuku ezingu-360 nezingu-540, awudingi ukulinda kuze kufike isikhathi sokuphela ukuze uthole imali yakho eyinhloko nenzuzo. Kokubili imali eyinhloko nemiklomelo kukhululwa nsuku zonke phakathi nesikhathi sebhondi.

Ingabe isaphulelo simisiwe?

Isaphulelo asimisiwe. Iphrothokholi izolungiswa ngokuya ngezimo zangempela.

Ibhondi lezinsuku ezingu-540 kuqhathaniswa ne-staking yesikhathi eside yezinsuku ezingu-540

Yomibili imikhiqizo inesikhathi sezinsuku ezingu-540 nomkhawulo ophezulu ongu-5×.

Imiklomelo ikhiqizwa ngokukhiqizwa kwamabhulokhi kwansuku zonke, futhi imiklomelo ekhiqiziwe inganqwabelaniswa njalo ukuze kusheshiswe ukuqongelela kwenzuzo yonke.

Ibhondi lezinsuku ezingu-540 I Okuhle okuyinhloko: Isaphulelo + I-RM eyengeziwe

Ungena nge-USDT, futhi okuhle okuyinhloko yisaphulelo sebhondi, esikuvumela ukuthi uthole i-RM eyengeziwe ngentengo engaphansi kwentengo yemakethe yamanje.

Ngemva kokungena, imali eyinhloko nemiklomelo kukhululwa kancane kancane nsuku zonke. Imiklomelo yansuku zonke ingaphinda inqwabelaniswe, nomkhawulo ophezulu ongu-5×.

Isibonelo, ngokutshala ama-USDT angu-10,000, uma kucatshangwa ukuthi: Intengo yemakethe ye-RM: 30 USDT. Intengo yebhondi lezinsuku ezingu-540: 24 USDT.

Ngentengo yemakethe: 10,000 ÷ 30 ≈ 333.3 RM

Ngebhondi lezinsuku ezingu-540: 10,000 ÷ 24 ≈ 416.7 RM

Ngama-USDT afanayo angu-10,000, isaphulelo sebhondi sikunika cishe i-RM engu-83.4 eyengeziwe lapho ungena.

Ngakho okuhle okuyinhloko kwebhondi yilokhu: okokuqala uthola i-RM eyengeziwe ngentengo yokungena enesaphulelo, bese uqhubeka uqongelela ngokukhululwa kwansuku zonke nokunqwabelana kwenzalo phakathi nesikhathi sezinsuku ezingu-540.

I-staking yesikhathi eside yezinsuku ezingu-540 I Okuhle okuyinhloko: Inzuzo yesikhathi eside + Imiklomelo eyengeziwe

Ungangena nge-USDT noma nge-RM, futhi impahla ibamba iqhaza emjikelezweni we-staking yesikhathi eside wezinsuku ezingu-540.

Ngokungafani nebhondi, okugxilwe kukho kakhulu akukhona ukuthola i-RM eyengeziwe ngentengo yebhondi enesaphulelo. Kunalokho, le ndlela igxile enzuzweni yesikhathi eside kanye nemiklomelo eyengeziwe.

Imiklomelo ikhiqizwa nsuku zonke ngokukhiqizwa kwamabhulokhi futhi ingaphinda inqwabelaniswe njalo ukuze kusheshiswe ukuqongelela, nomkhawulo ophezulu ongu-5×.

Ngamagama alula:

Ibhondi lezinsuku ezingu-540 = Ukungena ku-RM ngesaphulelo + I-RM eyengeziwe lapho ungena + Ukukhululwa kwansuku zonke kwemali eyinhloko nemiklomelo + Ukunqwabelana kwenzalo + Umkhawulo ofika ku-5×

I-staking yesikhathi eside yezinsuku ezingu-540 = Ukungena nge-USDT/RM + Inzuzo yesikhathi eside + Imiklomelo eyengeziwe + Imiklomelo yamabhulokhi yansuku zonke + Ukunqwabelana kwenzalo + Umkhawulo ofika ku-5×

Kokubili kunesikhathi sezinsuku ezingu-540, umkhawulo ophezulu ongu-5×, nekhono lokunqwabelana kwenzalo. Umehluko oyinhloko ukuthi ibhondi ligxile esaphulelweni nasebuningini obengeziwe be-RM, kanti i-staking yesikhathi eside igxile enzuzweni yesikhathi eside nemiklomelo eyengeziwe.

OKUFANELE UKUTHATHE KULE NGXENYE

Ibhondi lingumkhiqizo ophambili wephrojekthi wemakethe yamazwe ngamazwe kulesi sigaba, ngenxa yesaphulelo nokukhululwa kwansuku zonke; isaphulelo siyashintsha futhi sifundwa ekhasini lebhondi ngalolo suku; imali eyinhloko nemiklomelo yebhondi kukhululwa nsuku zonke futhi kubalwa ngaphakathi komkhawulo. Akukho kulokhu okuyisithembiso senzuzo, futhi umlayezo oya kubalingani usho kanjalo ngezinyathelo zawo ezibalulekile.

07

INGXENYE VII

Izimemezelo kusukela ekwethulweni

Sonke isimemezelo esisemthethweni kusukela kwethulwa i-mainnet, esisha kakhulu kuqala, sifinyeziwe, nomthombo lapho ukhona.

Zonke izibalo njengoba kushiwo yi-Spartan OS noma i-Anubis Chain ngosuku olushiwo. Amazinga ayashintsha; imikhawulo imiswa lapho ungena. Akusona iseluleko sezezimali.

USUKU	UMTHUMELI	OKUMENYEZELWE
20 Septhemba 2026	Anubis Chain × CertiK	**Isexwayiso sokuphepha: FomoPeek** Ikhodi enenhloso embi epakishwe kabusha ezinhlelweni zokusebenza ze-iOS ingafunda okhiye, amagama okuvuselela (seed phrase) namarekhodi ezingxoxo; buyekeza ku-iOS 26.7, ugweme izinhlelo zokusebenza ongazazi.
19 Septhemba 2026	Anubis Chain	**Isaziso sokuphepha: alukho uhlelo lokusebenza oluthi 'Anubischat'** I-Anubis Chain ayikaze ishicilele uhlelo lokusebenza lwezokuxhumana kunoma yisiphi isitolo; ungalufaki futhi ungaxhumi isikhwama kulo.
17 Septhemba 2026	Anubis Chain	**Umxhasi wegolide ku-TOKEN2049 Singapore** Marina Bay Sands, 7 kuya ku-8 Okthoba 2026.

Ukuphepha, ukuhlola nezixhumanisi ezisemthethweni

Imithetho evimbela ukulahlekelwa, lapho ungahlola khona sonke isibalo, nezixhumanisi okuyizona kuphela ezibalulekile.

THAYIPHA, UNGACHOFOZI

Amakheli nezixhumanisi kuthayiphwa kule ncwadi yesandla noma emtapweni, noma kuthathwe ku-anubischain.ai nakuma-akhawunti asemthethweni e-X. Hhayi neze engxoxweni, noma ngabe umthumeli ubonakala esezingeni eliphezulu kangakanani.

I-CHAIN ID 6714

Uma isikhwama sibonisa enye i-chain ID, sisenethiwekhini engalungile. I-RPC rpc.anubispace.org, i-explorer browser.anubispace.org, izinkokhelo nge-gasDAI.

EZINE ZOKUQALA, EZINE ZOKUGCINA

Qhathanisa izinhlamvu ezine zokuqala nezine zokugcina zalo lonke ikheli lenkontileka nelomamukeli, negama lethokheni isikhwama esilifunda emuva.

QALA NGOKUHLOLA OKUNCANE

Yonke indlela entsha (i-bridge, i-swap, uku-stake, uku-claim) ngenani ongeke ulidinge, bese kulandela okusele.

AMAGAMA OKUVUSELELA EPHEPHENI

Ayikho i-akhawunti esemthethweni, akekho umholi futhi alikho ihhovisi losizo elizoke liwacele. Alukho uhlelo lokusebenza olusemthethweni oluthi 'Anubischat'. I-CertiK ixwayisa ngekhodi eyingozi ezinhlelweni ze-iOS ezipakishwe kabusha: buyekeza i-iOS, gwema imithombo engaziwa.

HHAYI NGQO ENKUNDLENI YOKUSHINTSHANA

I-USDT ebophelwe ese-Anubis iyimpahla ehlukile. Qala ubuyisele nge-bridge eketangweni lomthombo; izinkundla zokushintshana azizifaki ema-akhawuntini izimali ezithunyelwa zivela ku-Anubis Chain.
