

PRESENTER KIT · FOR LEADERS · NOT FOR PUBLIC DISTRIBUTION

SPARTAN OS THE FORTY-MINUTE CALL

The thirteen slides with what to say on each, what to point at, what not to say, the timings, the questions that follow and the close. For Zoom and for the room.

PHALANX COMMUNITY · PREPARED FOR LEADERS AND PRESENTERS
RATES AS STATED BY SPARTAN OS ON 7 AND 14 SEPTEMBER 2026 AND SHOWN ON
SPARTANAR.ORG ON 24 SEPTEMBER · THE BOND FIRST, FROM 25 SEPTEMBER · ENGLISH
EDITION

OCTOBER
2026

CONTENTS

WHAT THIS KIT COVERS

One call, run the same way every time: thirteen slides, forty-one minutes, the questions that follow, and a close that leaves the links on screen. Every figure the kit tells you to say carries its cap and its date.

I	Before the call	03
II	The talk track, slide by slide	05
III	The questions that follow	12
IV	The close and the first forty-eight hours	18
V	The rules	20

HOW TO USE THIS

Print Part II or keep it open on a second screen. The left column is what is on the slide; the right column is what you say, what you point at, and what you do not say. The timings add up to forty-one minutes; a call that runs to fifty has taken too many questions in the middle. Take them at the end, with slide 13 on screen.

Why a talk track

The deck carries the story; the presenter carries the numbers, and numbers said out loud are the ones that get repeated. A leader who says the cap every time the rate is mentioned trains a room to do the same. A leader who improvises a rate trains a room to improvise. This kit exists so that every Phalanx presenter says the same thing, with the same caveats, from the same sources.

01

PART I

BEFORE THE CALL

Twenty minutes of preparation, the same every time. The call is only as current as the last announcement you read.

1 Read the last three announcements

The News section of the library, newest first. If a security notice is among them, it opens the call, before the deck.

2 Check the dashboard

spartanar.org: the flexible rate per rebase, the bond prices and discounts, the vault cap. If a figure differs from Terms today, the dashboard wins; say the date you read it.

3 Open the calculators

Have both calculators ready in a second tab with the price of the day. The first question after the call is always a number; answer it with the person's own inputs.

4 Set up the screen

Share the PDF, not the PPTX, unless you present from the notes. Camera on. Everyone else muted. Chat open for questions, answered at the end.

5 Send the first message

The first message from the Messages section, with the deck PDF, one hour before. Nobody joins a call cold.

6 Decide what you will not cover

V6 and above, TempleRaid strategy, GD price history. If asked, answer in one sentence and point to the library.

THE ONE SENTENCE BEFORE SLIDE 1

'I want to show you three things tonight. Who built this. What the chain already does. And exactly what it pays, per day, with its cap.' Then move.

02

PART II

THE TALK TRACK, SLIDE BY SLIDE

Thirteen slides. Forty-one minutes. What is on the slide, what to say, what to point at, and the line not to say.

SLIDE 01 · 1 MINUTE

Spartan OS on Anubis Chain

Built by the foundation that built Origin.
Running on a chain they own. Ninety days in,
paying every twelve hours.

SAY

One line before the first slide: 'I want to show you three things tonight. Who built this. What the chain already does. And exactly what it pays, per day.' Then move.

POINT AT

Nothing. Your face, not the slide.

DO NOT SAY

Do not open with the rate.

SLIDE 02 · 3 MINUTES

The next chapter of a story you may already know.

Anubis Foundation: two years, five continents, twenty countries, more than a hundred projects. Three of them shaped everything that follows.

SAY

Do not rush this slide. Leaders join people, not products. Say the names slowly: Origin. WebKey. Melos. Anubis Chain. Then: 'Same team. Same code. New chain.'

POINT AT

The four names, in order, then the arrow to Anubis Chain.

DO NOT SAY

Do not name a founder, a nationality or a meeting you were not at.

SLIDE 03 · 3 MINUTES

They have done this before, at scale.

A historical market snapshot of the Origin ecosystem on AVE. Not today's prices. Proof that this foundation can build a market of millions and keep it alive.

SAY

The point is the last number. Two years later the pool is still there and people can still sell. 'Every other project of that generation is gone. This one is not.' Let it sit.

POINT AT

The last figure: the pool still on Polygon two years on.

DO NOT SAY

Do not say Origin 'never lost anyone'.

SLIDE 04 · 4 MINUTES

Most projects rent a chain. This one owns it.

Anubis Chain went live in April 2026. Fees are paid in gasDAI, pegged to the dollar. Everything below is on the public explorer at browser.anubispace.org.

SAY

'When a project runs on someone else's chain, the gas, the rules and the future belong to someone else.' Then the numbers. Then: 'You can check every one of them yourself tonight.'

POINT AT

Chain ID 6714, then the transaction count. Say where to check it.

DO NOT SAY

Do not read every number; three are enough.

SLIDE 05 · 3 MINUTES

Two tokens. One live game. Numbers, not promises.

RM is the token you earn and use. GD is the governance token, 390,000 fixed. TempleRaid, with GoPlay, went live on 6 September. The dashboard on 14 September 2026 read:

SAY

Say '68% staked' twice. It means two out of three tokens are locked and earning, not waiting to be sold. That is the number a sceptic cannot argue with.

POINT AT

68% staked. Then the game.

DO NOT SAY

Do not quote the annualised figure on the dashboard.

SLIDE 06 · 3 MINUTES

Five streams. All paid every twelve hours.

Four of them open from \$1. Every RM you earn passes through the same turbine before it reaches your wallet.

SAY

Read the five numbers across the top, left to right, without commentary. Then: 'Every one of these lands every twelve hours.' Ask the room which stream is theirs. Move on before anyone answers.

POINT AT

The five numbers across the top, left to right.

DO NOT SAY

Do not say 'passive'.

SLIDE 07 · 5 MINUTES

Paid every twelve hours. Capped in dollars.

Principal comes back daily from day one. The cap is set in USDT the moment you enter. Rates float with the platform; the cap does not.

SAY

Lead with the cap. 'A rate without a ceiling is a story. A rate with a ceiling is a contract.' Then run the middle two columns with your finger: six, eleven, twelve, thirteen dollars a day on a thousand.

POINT AT

The cap column first, then the daily column on \$1,000.

DO NOT SAY

Do not say 'guaranteed', and do not quote a rate without its cap.

SLIDE 08 · 4 MINUTES

Same \$1,000. Five daily numbers.

Simple daily rate as stated, on a \$1,000 position, before team income and rank rewards. Compounding not included.

SAY

Point at the fifth bar. 'This is why the burning bond exists: the highest daily number, the lowest ceiling, and the only door to the fourth: 'This is the one leaders hold.'

POINT AT

The fifth bar (burning bond), then back to the fourth (360 days).

DO NOT SAY

Do not promise GD appreciation.

SLIDE 09 · 2 MINUTES

Buy RM below market. Own conditions, own cap.

Bonds are bought from the same dashboard but are their own product. A promoter should never present them as staking.

SAY

Keep it short. 'Cheaper entry, same ceiling, no extras. Some people want more tokens; some want the daily number.'

POINT AT

The discount column, then the cap column: the same cap.

DO NOT SAY

Do not present bonds and stakes as one product.

SLIDE 10 · 5 MINUTES

Two legs, not three. The rank pays daily.

8% of the ROI on your first level, 4% on the second, 2% on the third, every twelve hours. Then twelve ranks paid daily from the DAO pool, with rank-differential, same-rank and override (overtaking) rewards of about 10% to 15% on top.

SAY

'V1 is \$500, three people and two teams of \$10,000. Most of you have that in your phone already. Origin needed three teams at \$50,000.' Read V1 to V5 down the last column and stop. If someone asks about V6 and above, say the words on the slide: approximate, reference only, set by the block reward rate on the day and by the AICS score. Never say guaranteed.

POINT AT

V1: \$500, three people, two zones of \$10,000. Stop at V5.

DO NOT SAY

Do not sell above V5 to someone who has not bought a bond; do not say the reference figures are fixed.

SLIDE 11 · 4 MINUTES

Balance first. Price second.

O², RM's adaptive balancing protocol, is positioned by Spartan OS as a global first: Olympus DAO and Origin, upgraded so the rules adapt to the market. It balances supply and demand and protects liquidity. It does not set the price.

SAY

This slide answers the question they are thinking: 'what stops it collapsing like the others.' Answer it before they ask, and answer it their way: the protocol protects liquidity and slows a cascade; it does not promise a price. Then the four cards, one breath each: turbine, tax, burn, pool.

POINT AT

The four cards: turbine, tax, burn, pool. One breath each.

DO NOT SAY

Do not call O² a price floor.

SLIDE 12 · 2 MINUTES

Ninety days old. Not ninety days late.

The first project on a new chain from a foundation with a record. The positions that matter are the ones taken before the second and third applications arrive.

SAY

Do not oversell scarcity. State it once: 'The second application is coming. The people who built their team under the first one are the people it lands on.'

POINT AT

The date. Ninety days old.

DO NOT SAY

Do not oversell scarcity; state it once.

**SLIDE 13 · 2 MINUTES****Add. Bridge. Bond.**

Seven steps, one evening. The bond comes first; staking comes once you are in and hold RM bought from your leader. The links below open on click and scan from a phone.

SAY

End with the seven steps and stop talking. Say the order once: wallet, chain, gasDAI, USDT, the leader's link, the 540-day bond, the claim. Staking is not tonight's step; it comes once they are in and hold RM bought from their leader. Leave the links on screen: they can scan the codes while you take the first question. Do not fill the silence.

POINT AT

The seven steps, then the scan codes. Say 'bond' once. Then silence.

DO NOT SAY

Do not fill the silence. Do not send the deck again; send the first message.

THE NUMBERS YOU WILL SAY, WITH THEIR CAPS AND DATES

FIGURE	SAY IT AS	CAP	DATE
Flexible staking	about 0.3% per twelve hours, floating	none; principal withdrawable	7 Sept; 0.2962% per rebase shown on 24 Sept
180-day staking	1.1% a day as stated	4× of entry, fixed in USDT	7 Sept 2026 (14 Sept: over 1.0%)
360-day staking	1.2% a day as stated	4.5× of entry, fixed in USDT	7 Sept 2026 (14 Sept: 1.1%)
540-day staking	1.3% a day as stated	5× of entry, fixed in USDT	7 Sept 2026 (14 Sept: 1.2%)
Liquidity bonds	RM 1.29%, 11.46%, 16.61% below market	same caps as the matching stake	24 Sept 2026, spartanar.org
Stability vault (burning bond)	from 500 USDT, 1.5% a day net	250% release	7 Sept; cap shown on 24 Sept
Level income	8%, 4%, 2% of the ROI on three generations	energy needed to withdraw	leader briefing, Sept 2026
V1	\$500 own, three direct, 10,000 in each zone, 5% to 10% band	band, not a figure	Economic Model Analysis p.16
Sell tax	8% to 13%, 13% to 20%, 20% to 30% by the size of the fall	applies from a 5% fall against the 3-hour average	O ² deck, Sept 2026

03

PART III

THE QUESTIONS THAT FOLLOW

The objections, in the order they usually arrive. The short answer is the one to say; the longer one is for when they push.

01 · IS THIS A PONZI SCHEME?

Ask what they mean, then answer the mechanism. A Ponzi pays old money with new money and hides it. Here every payout is a purchase: the turbine makes each claim buy the same amount of RM on the DEX before it is released, the treasury, the liquidity and the fund addresses are on a public explorer, and every long-term position has a cap fixed in dollars the day it opens.

The honest version has three parts. First, what is verifiable today: the bridge reserves on Etherscan, the treasury and liquidity figures on the dApp dashboard, RM trades and TempleRaid rounds on browser.anubispace.org, the CertiK assessment of the Spartan OS contracts (zero critical, zero major, three medium resolved). Second, what is the project's own statement rather than a fact you can check: the rates, the roadmap, the user numbers. Third, the risk: rates float, the price moves, the sell tax rises on the way down, and a cap means a position ends. Someone who hears all three from you will trust the rest.

Do not say 'it cannot be'. Do not compare it to a bank. Do not quote the annualised figure.

02 · THE RETURNS ARE TOO HIGH TO BE REAL.

They are high, they float, and they are capped. 1.1% to 1.3% a day on a long-term position is the stated rate on the day; the cap is 4× to 5× of what went in, fixed in USDT; the flexible pool pays around 0.3% per twelve hours and can move. Say the cap in the same breath as the rate, every time.

Explain where the payout comes from as the project describes it: the RM emission, the sell fee split (0.5% platform, 1.2% buyback, 1.3% community, 2.0% ecosystem), the extra sell tax on the way down, and the turbine that turns every claim into a purchase. Then explain what limits it: the cap on every long-term position, the rebase snapshot, and the O² protocol that slows selling when the price falls. High and unlimited is a story. High, capped and dated is a term sheet.

Never say 'guaranteed'. Never project a month's income as if the rate were fixed.

03 · WHO IS BEHIND IT? I CANNOT FIND THE FOUNDERS.

Anubis Foundation, which built Origin (LGNS), WebKey and Melos, and now its own chain. Anubis Labs is the funding arm; Spartan OS is its first application. The team publishes under the foundation's name rather than personal names, which is common in this part of the industry and is a fair thing to dislike. What you can check is the work: the chain has been live since April 2026 with over 100 million transactions, and the contracts were assessed by CertiK.

The foundation's footprint is public: two years, five continents, a hundred projects, and Origin's snapshot of 2.5 million holders and a \$1.4 billion market cap at its peak. Company management runs Spartan OS with a stated plan to run it for years, and to run it bigger and better than Origin. The Dubai office and the leader meetings are where people meet them in person. Say plainly that founders are not public by name, and that the person deciding should weigh a public codebase, a public chain and an audit against that.

Do not invent a founder's name or nationality. Do not claim to have met anyone you have not met.

04 · CAN I LOSE MONEY?

Yes. RM is a traded token; the dollar value of every payout depends on the price on the day. Selling into a fall carries a tax that rises with the fall. TempleRaid is a game of chance. A long-term position cannot be unwound early. Anyone who tells you otherwise is not describing the programme.

Then describe what the project has built to reduce the damage, without turning it into a floor: caps fixed at entry so a position cannot chase, the turbine that converts claims into purchases, O² that raises the sell tax and protects liquidity when the price falls 5% or more against the three-hour average, the buyback fund, and the Price Stability Fund of 1,000,000 USDT at a published address. None of these is a guarantee. All of them are on the dApp or the explorer.

Do not say 'you cannot lose'. Do not say the price 'always comes back'.

05 · WHY CAN I NOT WITHDRAW MY REWARDS STRAIGHT AWAY?

You can, after one step. Every claim goes into the turbine: you buy the same amount of RM on RocketSwap, the claim unlocks after 24 hours, and the purchased RM is yours as well. Level income needs energy on top, one unit per RM, from a 360-day stake or from burning RM.

The turbine is the mechanism the project points to when asked how a token paying daily returns has stayed above \$30 for months: the returns themselves are buy pressure. It also means every payout costs a matching purchase before it can be sold, which a promoter should say out loud. Energy applies only to the 8%, 4% and 2% level income, not to personal staking, bonds or rank rewards.

Do not describe the turbine as a fee. Do not skip the 24 hours.

06 · IS IT AUDITED? IS MY MONEY SAFE ON THIS CHAIN?

Spartan OS completed a CertiK assessment on 2 August 2026: governance multisig, treasury, staking, reward distribution and core token contracts, with zero critical and zero major findings and three medium findings resolved. GaleBridge was audited by CertiK in October 2025. Anubis Chain states 137 core contracts verified with CertiK and Armor. Every bridged asset is minted one to one against assets locked in bridge contracts you can read on Etherscan.

Safety on the way in is mostly the user's own: chain ID 6714, addresses typed from this page, the first four and last four characters checked, a small test first, the seed phrase on paper. Two current notices matter: there is no official 'Anubischat' app, and CertiK warns about malicious code repackaged into iOS apps. Forward both. An audit covers the code. It does not cover a phishing link.

Do not say 'audited' without saying by whom and when. Do not send links from chats.

07 · I WAS BURNED BY ORIGIN, OR BY ANOTHER PROJECT LIKE THIS.

Then you already know the two questions that matter: what limits the payout, and what happens on the way down. Spartan OS answers the first with a cap fixed at entry and the second with O², the sell tax and the buyback fund. Origin required three legs; Spartan OS requires two. The codebase is the one Origin ran, on a chain the same foundation now owns.

Do not argue about the past. Ask what went wrong for them: usually an uncapped rate, an exit that was closed, or a promise from a promoter. Show the cap, show the turbine, show the sell tax table, and show the explorer. Then let them decide the size, and suggest a small position first. About \$55 million remains in Origin's pool on Polygon two years on; that is a fact about longevity, not a promise about this one.

Do not disparage other projects by name. Do not promise this one is different; show what is different.

08 · WHY DO I NEED A REFERRAL LINK? THIS IS MULTI-LEVEL MARKETING.

The programme pays for building a community, in the open: 8%, 4% and 2% of the ROI on three levels, then twelve ranks paid from the DAO pool on the smaller leg. The referral link is how the dApp knows who introduced whom. Nobody earns from a recruit's deposit; the level income is a share of what that person's own position earns.

Say what the rank structure demands before saying what it pays: your own position, a number of directs from 100 USDT, and volume in two legs, with the larger leg qualifying and the smaller one paying. Most people will sit at V1 to V3. Use the rank calculator with their real numbers rather than the top of the table. The referral link is theirs to use or not; the staking products pay the same either way.

Do not sell the ladder above V5 to someone who has not opened a first position. Do not call it 'passive'.

09 · WHAT HAPPENS WHEN MY POSITION REACHES THE CAP?

It is complete. A 540-day position that took \$1,000 has paid out \$5,000 of RM value, principal included (confirmed 26 September 2026: the capital counts inside the cap and is not paid on top), and it closes. You open a new one if you want to continue. Flexible staking has no cap and no term; the principal can be withdrawn at any time.

At the stated rates the 360 and 540-day positions reach their ceiling in about ten months, before the term ends; the 180-day position reaches the end of its term first. The burning bond releases 250% of the order in about five and a half months at 1.5% a day. Say which one applies, and that all of this is arithmetic on today's stated rate, which floats.

Do not describe the cap as a loss. Do not promise a renewal on the same terms.

10 · WHY A CHINESE TEAM, AND WHY IS EVERYTHING IN CHINESE FIRST?

Because the foundation is, and because its community was built there first: Origin's 2.5 million holders, the Melos and WebKey users, the launch events in Kuala Lumpur and the region. The English material exists because that community is now being built here. The chain, the contracts and the explorer do not have a language.

This library exists for that reason: the official documents translated or reproduced as issued, the announcements in plain English with the date, the tutorials with English captions, and one place to check a figure. If a person's concern is really about accountability rather than language, answer it with the audit, the public chain and the meetings in Dubai.

Do not make it about nationality. Do not translate a number you have not checked.

11 · CAN I PUT IN A LARGE AMOUNT STRAIGHT AWAY?

You can. Do not. Start with an amount you would not miss, run one full cycle (stake, claim, turbine, release), then decide. The programme rewards long-term positions, and a long-term position cannot be unwound early, so the second decision should be made with the first one behind you.

A leader who tells a new person to start small is the leader that person stays with. Show the minimums: 1 USDT for staking and bonds, 500 USDT for the stability vault, 200 USDT for the extra-reward bucket on 360 and 540-day positions. Then show what each product pays at their number on the calculator, cap and date attached.

Do not set a target. Do not stack products for a stranger.

12 · WHAT PERCENTAGE OF EVERY DEPOSIT GOES TO THE NETWORK?

None, because that is not the model. Spartan OS says capital entering the protocol goes to the asset side, liquidity, treasury and protocol-owned liquidity, while RM is minted against it under the protocol's rules, locked, released in a controlled way and balanced by O². A percentage would describe a fund that splits deposits, which the project says it does not run.

Give the two sides in one breath: what protocol assets the money creates, and what future RM supply is created against it and how it reaches the market. Then hand over the project's own due-diligence question: for every unit of capital, what assets are created, what RM supply or future liability is generated, how it is released, and what balances it against real demand and liquidity. Point at the data that answers it: net RM issuance, buyback and burn volumes, POL and liquidity depth, retention, and the 13 September fall and recovery.

Do not invent a percentage to satisfy the question. Do not say the mechanisms guarantee anything; the statement says they cannot control behaviour.

13 · RM IS JUST EMISSIONS THAT GET SOLD. EVERY ONE OF THESE TOKENS ENDS UP AS SELL PRESSURE.

That is the risk the design is built around, and the project says so in its own due-diligence answers. RM does not reach the market when it is minted: long-term staking, the 360 and 540-day bonds and compounding hold it back; every Turbo claim needs a purchase of the same size, which then sits in a 24-hour silent period; RM burned for Energy leaves supply for good; O² raises the sell-side protection when selling runs ahead of buying; and the applications are meant to consume it. None of that guarantees a price.

Give them the numbers to watch instead of an argument: new RM supply against circulating supply, Turbo buy demand, RM locked long term, RM burned, and liquidity depth. Those are the project's own metrics, and all of them are on the dashboard or the explorer. The one line to keep: the mechanisms improve the structure of supply and demand; whether demand grows enough to absorb supply is what the data will show, and nobody can promise it.

Do not say RM cannot fall. Do not say O² stops selling; it slows a cascade and gives liquidity time.

14 · IS TEMPLERAID GAMBLING?

It is a game of chance with money at stake, on chain, with provable randomness and sixty-second rounds, and a player can lose what they enter. It is one application on Spartan OS, not the programme. Nobody needs to play it to stake.

The project describes an insurance mechanism behind it and the rounds are readable on the explorer. Say the risk before the feature, every time, and never send the game to someone who asked about staking.

Do not describe TempleRaid as income. Do not send it to anyone under 18 or in a jurisdiction where it is unlawful.

15 · THE 35 MILLION AND THE '50 MILLION NEXT' SOUND LIKE A PROMISE.

They are the project's numbers, with the project's own label on them. 35 million USDT is the stated total capital foundation on 26 September 2026. 36 million and 50 million are what the message to the international partners calls development goals, and the same paragraph says they are not guarantees of returns or of the RM price, which is set by supply and demand, liquidity and ecosystem development.

Send the message whole rather than the milestone line. Its argument is the opposite of a promise: the project reached 35 million through a cycle that included a correction and a period when confidence was tested, and it tells new markets that story so they do not mistake growth for a straight line. The reader can check the dashboard figures in Terms today against the 35 million and draw their own conclusion about the distance to 50.

Do not say 'we are going to 50 million'. Do not turn a goal into a date. Do not quote the milestones without the sentence that follows them.

04

PART IV

THE CLOSE AND THE FIRST FORTY-EIGHT HOURS

End with the seven steps and stop talking. The bond is the first position; staking comes once the person is in the system and holds RM bought from you. What happens in the two days after the call decides whether it was worth holding.

1 Leave slide 13 on screen

The seven steps and the scan codes. Take the first question with it on screen; do not switch back to the numbers.

2 Answer the number question with the calculator

Someone will ask what their amount pays. Open the calculator, enter their amount, read day one, thirty days and the cap out loud, and send the summary text.

3 Send the second message within the hour

The second message from the Messages section, with one-pager 06 and the link to How to start. Nothing else.

4 Book the walk-through

Offer a fifteen-minute screen share for the first four steps: wallet, chain, gasDAI, USDT. Most losses happen at the bridge with a link from a chat, and the referrer binds in step 5, so the registration happens with you.

5 Register through your link, in person

The dApp binds the referrer on the first connection and it cannot be changed. Do the registration on the walk-through, with your link, not by sending it to a group. The first position is the 540-day bond, read from the screen; staking comes later, once the person is in and holds RM bought from you.

6 Log what you could not answer

The 'Question not answered' button on the library. The next edition carries it.

THE SIZE OF THE FIRST POSITION

Say it before they ask: start with an amount you would not miss, run one full cycle of the bond, then decide. A 540-day position cannot be unwound early. The leader who says this is the leader people stay with.

05

PART V

THE RULES

Six rules from the leader document. A presenter who keeps them can be trusted with a room.

LEAD WITH THE CAP

A rate without a ceiling is a story; a rate with a ceiling is a term. Say the cap in the same breath as the rate, every time.

QUOTE THE BAND, NEVER THE TOP

Flexible is a floating figure. V3 is 10% to 20%. The sell tax at a 10% fall is 13% to 20%. The top of a band is not the programme.

EXPLAIN THE TURBINE BEFORE THE REWARDS

Every payout is a purchase: buy the same RM, wait 24 hours, release. Say it before anyone imagines a withdrawal button.

NAME WHAT IS UNPUBLISHED

The AICS mapping, the same-rank cutoff, the differential rules, the extra-reward weighting. Say 'not published' rather than guessing.

KEEP PUBLIC AND PROGRAMME MATERIAL APART

The deck and one-pagers are for anyone. The leader document, one-pager 07 and this kit are for leaders, behind the passphrase.

SAY WHAT THE RISKS ARE

Price, sell tax, the cap ending a position, phishing links, the wrong chain. Before, not after.

Present the files as issued

Translate with approval. Never edit a number. Never add a rate to a film or a card. Take addresses and links from the library's Terms today section or the official accounts, never from a chat, however senior the sender appears. No official account will ever ask for a seed phrase, and neither will you.
